Module Focus on Language Structure
06SM440-120 / Module

Description:

General description:
Building on previous knowledge, seminars in this module will focus on the core structural aspects of English (phonetics and phonolgy, morphology, syntax and semantics). On the basis of theoretical concepts, they will provide specialised knowledge of these concepts and research paradigms relating to the core building blocks of the language. Students will use this knowledge to develop their own research questions, discuss these in class and integrate the results of the discussion into their written course work.

ECTS: 6

Learning Outcome:
Students are familiar with central concepts in the area of language structure. They are able to apply methods of collecting and analysing data for simple research questions on language structure. They are able to identify relevant research literature on language structure and to develop research hypotheses based on this background. They are able to to discuss and present these aspects in class and subsequently integrate them into their written work.

Module CHE 325 Solid State and Materials Chemistry
07SMCHE325 / Lecture with Practical Exercises

Description:

General description:
This course is designed as an introduction to the fundamentals of modern materials chemistry and design. Structure-property relationships of important solid materials are discussed with special emphasis on their application potential. The lecture starts with an introduction to the fundamental concepts of point/space groups, crystallography and diffraction techniques. Next, the most important inorganic structure types are explained in detail. Subsequently, the different types of defects in solids are introduced. This lays the foundation for technologically important properties of solids, such as conductivity, optical properties, and cooperative phenomena (e.g. magnetism and ferroelectricity). Further information about the electronic structure of solids rounds off the discussion of materials development. Finally, contemporary synthetic techniques and emerging research fields will be covered as an outlook on applied solid state chemistry.

ECTS: 4

Learning Outcome:
1. Basic knowledge of crystallography
2. Standard analytical and diffraction methods for materials characterization
3. Key structure types of solid state chemistry
4. Important properties of solids and their technological applications
5. Overview and application of key synthetic methods in materials design

Module GEO 411 Field Studies on High Mountain Processes
07SMGEO411 / Lecture with Practical Exercises

Description:

General description:
This Module is focused on introducing field methods and their application for investigating processes in high mountain environments (glaciers, permafrost, geomorphology,...). Besides getting familiar with specific methods and field equipment (including ice-penetrating radar, temperature logging, melt measurements and modelling, geomorphological mapping, sampling strategies...) it conveys the development and practical aspects of field-project studies in high mountains areas.
The module consists of two parts:

- (i) The preparatory seminar, introducing the field-approaches and related background in practical seminars (4h, bi- weekly practicals in FS, compulsory); and
- (ii) The field course (5-day, End of August, compulsory), in which the students work on their own group- project in the field (Witenwasserengletscher, Rotondohütte area) using the methods and tools from the preparatory seminar, followed by two compulsory data analysis sessions at the Department of Geography.

Note:
- The course will end with a compulsory presentation session.
This module will, as a whole, also contribute to a deeper understanding of the physical processes and their interactions in high mountain areas.

ECTS: 6

Notes:
Please note that the entire module needs to be attended and therefore attendance is compulsory for all practical seminars (spring term), the field course, the data analysis sessions and the final presentation session.
Attendance of the preparatory seminars (GEO411.1) in FS is compulsory for the field course.

Costs for the field course are approx. CHF 380.00 per student, excluding train ticket and subject to small changes.
A general physical fitness and ability to hike and move around in mountainous terrain is required.

- Note: field course, post-fieldcourse sessions are all compulsory - check your availability!
- Insurance is the responsibility of the participants.
- By booking this module you agree to the following authorisation clause: I agree that on my behalf bookings or reservations within the price range for the excursion are made on my behalf.

Target Groups:
Master students, with interest in practical field studies and processes of high mountain environments (Glaciers, Permafrost, Geomorphology,...)

Module GEO 422 Urban Geography: Research and Methods
07SMGEO422 / Seminar

Description:

General description:
The city is one of the most important sites of change in the 21st century. To account for the diversity of urban experiences, knowledge about urban change is increasingly being developed in partnership. This module deepens knowledge of urban geography and skills in qualitative research methods in the context of applied, collaborative urban research projects. In partnerships with non-university partner organizations, we are experimenting with a seminar format that puts the traditional roles of researchers and research subjects, as well as of teachers and learners, to the test. To this end, we are developing research projects in which students produce learning and knowledge in and about Zurich with, rather than about, actors in the city.

- Please visit the project website www.zueri-urban.com (https://www.zueri-urban.com/) for more details in the project.

ECTS: 6

Notes:
The manual allocation of places is based on the letter of motivation (in the course booking plattform, max. 300 words) with the following content:

- Current study period (major subject, semester, specialization)
- Motivation
The Sustainable Development Goals (SDGs (https://sdgs.un.org/goals)) are a collection of 17 global goals interacting with each other, which are designed to be the blueprint to achieve a better and more sustainable future for all. The 2030 Agenda for SDGs is adopted by all United Nations Member States.   These SDGs are covered in this module: 10 & 11

Learning Outcome:
1. to gain practical experience in key phases of a research process: This includes defining one's own research questions, operationalizing a self-developed research design, selecting and implementing qualitative methods, and evaluating and communicating the results; 2. To deepen theoretical and practical knowledge of qualitative research methods; 3. To gain practical skills in teamwork in research with stakeholders beyond the university; 4. To deepen communication skills and intercultural competence: this includes effectively communicating the research results to different stakeholders via different media forms (e.g., podcast, exhibition, film, etc.).

Module GEO 433 Global Economic Geographies of Agriculture and Food Systems
07SMGEO433 / Lecture with Practical Exercises

Description:

General description:
Module GEO433 offers in-depth engagement with agriculture, food production and food consumption in our global times.

In the seminar course GEO433.1 we will read and discuss texts and engage with additional visual material with three main emphases:

- First, we focus on the ongoing transformation of agricultural value chains and the increasing power of retailers and transnational food producers.
- Second, we turn our attention to realms that are marginalized in the mainstream value chain literature, such as labor relations, dispossession of land or the destruction of nature.
- Third, we ask for possible alternatives to globalized industrial agriculture and discuss both their potential and their challenges.

Theoretically, we will seek inspiration from critical political economy and from the literature that approaches the economy from a poststructuralist perspective.

Exercise course GEO433.2 complements these discussions with a two-day field-trip. The field-trip will put students into dialogue with practitioners from NGOs and the private sector, enabling them to deepen class discussions and to make connections to their everyday life.

ECTS: 6

Notes:
The Sustainable Development Goals (SDGs (https://sdgs.un.org/goals)) are a collection of 17 global goals interacting with each other, which are designed to be the blueprint to achieve a better and more sustainable future for all. The 2030 Agenda for SDGs is adopted by all United Nations Member States.

These SDGs are covered in this module: 5; 9; 10; 11 & 12

Learning Outcome:
Students develop an overview of contemporary academic literature and concepts on global food systems, agricultural value chains and alternatives to globalized industrial agriculture. They are able to critically discuss specific phenomena of globalization, commodification, and industrialization of agriculture using selected theoretical perspectives from economic geography and neighboring disciplines. They acquire an understanding of alternative ways of organizing food production and provision and their strengths and weaknesses. Engaging with empirical case-study literature and examples from practitioners, students are able to make connections to their own everyday lives. They practice crucial academic skills such as academic reading, writing, moderating, and debating.

Module CHE 153 Laboratory Course in Physical Chemistry for the Life Sciences
07SMCHE153 / Praktikum

Description:

General description:
The practical course is meant to deepen, supplement and practically apply the lectures in physical chemistry (CHE 154 and CHE 155) and to practise apparatus-based experimentation. The experiments cover the following topics: general thermodynamics, transport phenomena, spectroscopy and surface tension.
A large part of the practical course is the writing of scientific laboratory reports as preparation for later scientific publication. This also includes the scientific evaluation of the measurement data including error analysis.
Both are the subject of a special introduction at the beginning of the practical course.

ECTS: 4

Notes:
The capacity of the lab course is limited. If the requirements are not met, no place will be allocated. Preference is given to those students for whom CHE 153 is mandatory. All other students will be admitted according to the date of booking.

Attendance is MANDATORY at the introduction on the first Tuesday of the semester!
In case of absence, you lose your booked lab space!

Learning Outcome:
After completing the module, students should

- be able to experiment with chemical-physical apparatus
- apply the lecture material to laboratory practice within the scope of the experiments
- be able to record experiments
- be able to analyse experimental results including error analysis
- present and analyse linear relationships including error propagation
- be able to write a scientific lab report
- know the requirements for a scientific publication

Module BIO 122 Animal Behaviour
07SMBIO122 / Lecture with Practical Exercises

Description:

General description:
Leitfaden der Vorlesung ist, Verhalten aus evolutiver Sicht als Anpassung zu verstehen. Diskutiert werden die Analyseebenen von Verhalten, jegliche das Verhalten auslösende und regulierende (interne und externe) Faktoren, Konkurrenz um Ressourcen und Verpaarungen, Nahrungsaufnahme, Elternfürsorge, Feindvermeidung, Kommunikation, sowie Sozialverhalten.
Im Praktikum werden Methoden der Datenaufnahme und Datenauswertung diskutiert und an einem kleinen, selbständig durchgeführten Projekt geübt.

ECTS: 3

Learning Outcome:
Nach Besuch des Moduls (Vorlesung und Praktikum) sind die Studierenden in der Lage zu erklären

- wie Verhalten aus evolutionsbiologischer Sicht als Anpassung und als Produkt der Interaktion von Genen und Umwelt gesehen werden
- wie Kosten und Nutzen das optimale Verhalten beeinflussen
- wie gängige Methoden der Verhaltensdatenaufnahme und Auswertung anzuwenden sind
- was die wichtigsten Mechanismen der Regulation und Modifikation von Verhalten sind
- was die unterschiedlichen Komponenten von Fitness sind

Module BIO 142 Developmental Biology
07SMBIO142 / Lecture with Practical Exercises

Description:

General description:
Die Entwicklungsbiologie befasst sich mit den Mechanismen, welche zur Bildung komplexer Organismen führen. In den letzten Jahren wurde klar, dass unterschiedliche Entwicklungsvorgänge auf die gleichen, grundlegenden Konzepte zurückgeführt werden können. In der Vorlesung werden diese Konzepte eingeführt und durch Beispiele an Wirbellosen, Wirbeltieren und Pflanzen illustriert.

ECTS: 3

Learning Outcome:
Am Ende des Bio142 Moduls sollten die Studierenden die allgemeinen Konzepte und molekularen Grundlagen ausgewählter tierischer und pflanzlicher Entwicklungsvorgänge kennen. Dazu gehört die Kenntnis der Terminologie zur Beschreibung dieser Prozesse und das Verständnis der verwendeten experimentellen Ansätze. Die Studierenden sollten fähig sein, aus experimentellen Beobachtungen Schlüsse über einen Entwicklungsprozess zu ziehen und weitergehende Experimente vorzuschlagen, welche zur Überprüfung dieser Schlüsse geeignet sind.

Überfachliche Kompetenzen Die Studierenden können Daten aus Experimenten mit Hilfe von schematischen Darstellungen und Modellen interpretieren. Sie können ihr Grundwissen aus der Genetik, Zellbiologie, Molekularbiologie und Biochemie zur Beantwortung entwicklungsbiologischer Fragestellungen anwenden.

Module BIO 259 Research Internship in Molecular and Cellular Biology
07SMBIO259 / Beteiligung an Forschungsarbeiten

Description:

General description:
Participating students work under individual guidance of an advanced researcher (PhD student, postdoc, group leader) on a specific defined research project and write a scientific report upon completion of the project. Thereby students acquire practical and theoretical insight into actual cutting edge research in Molecular and Cellular Biology.

ECTS: 4

Notes:
4-12 weeks of work in the laboratory, by arrangement

Only for Bachelor students. A research project is completed in one of the research groups at the Department of Molecular Life Sciences (DMLS).
Project and modalities of grading are defined in detail by the head of the research group and the person responsible for the module BIO 259.
Research projects in groups outside the DMLS are feasible in principle, but require advance permission by the person responsible for the module BIO 259. BIO 259 can only be chosen during the BSc program. Minimum duration is 4 weeks of full time work in the laboratory, but internships of at least 6 weeks duration are preferred. ECTS credits are according to duration, 1 ECTS per week full time laboratory work internship.

1 per participant 2 half days (1 for introduction into project, 1 for correction/discussion of report, 0 for supervision of the experimental work, since in general the TA will do experiments that are part of his PhD project) The numbers given above are a proposal; ideally the Studienkoordination should arrive at a formula that applies to all of the research internships in the various directions

Learning Outcome:
Key Skills On completion of this module, students should be able to:

- perform successfully and independently a number of experimental laboratory protocols used in molecular and cell biology
- choose appropriate positive and negative controls for these experiments
- interpret the results of these experiments
- use a lab book or an electronic lab journal to record experimental protocols, results, and analyses
- describe the purpose of the internship project, in particular with respect to the larger research program of the host laboratory
- summarize and critically analyze in a written report the findings obtained during the lab internship, and the conclusions drawn from these findings

Languages of Instruction:
Deutsch & English

General description:
Introductory clinical epidemiology; measures of disease frequency (prevalence, incidence); measures of effect; study types in analytical epidemiology; study types in experimental clinical research; screening and diagnosis of disease; risk factors and prognostic factors; research synthesis and meta-analysis. Key concepts are introduced and illustrated using published research. Lectures are interactive and complemented with exercises.

By the end of the module the students should be able to

- explain common characteristics of research questions in epidemiology and clinical epidemiology
- compare key quantitative study designs in clinical epidemiology, namely randomised clinical trials, cohort studies and case-control studies, and their areas of application
- differentiate possible explanations of observed health effects, including causation, chance, confounding and bias
- perform simple techniques of confounding control such as standardisation and stratification
- calculate the characteristics of a diagnostic test (sensitivity, specificity, positive and negative predictive value)

Key skills
By the end of the module the students should be able to

- appraise whether published quantitative studies have been appropriately reported
- compare key characteristics of laboratory-based research and epidemiological/clinical research

Module MAT 153 Number Theory
07SMMAT153 / PHZH SEK I Module

Description:

General description:
In dieser Vorlesung werden elementare Themen aus der Zahlentheorie behandelt.

Beginnend mit einfachen Teilungseigenschaften natürlicher Zahlen (ggT, kgV, Primzahlzerlegung) werden wir sodann Restklassenringe, Einheiten, Primitivwurzeln, die Eulersche Phi-Funktion und diskrete Logarithmen einführen.

Ganzzahlige Lösungen von Gleichungen und Gleichungssystemen sind weitere Themen.

Über (abbrechende, periodische und allgemeine) Kettenbrüche gelangen wir schliesslich zur diophantischen Approximation reeller Zahlen.

Falls noch Zeit bleibt betrachten wir zum Schluss noch einige Verschlüsselungsverfahren.

4-12 weeks of work in the laboratory, by arrangement

Only for advanced Bachelor students. Students must arrange their research internship directly with a research group leader. Minimum duration is 4 weeks full time, but internships of at least 6 weeks duration are preferred. ECTS credits are according to duration, 1 ECTS per week full time internship.

Learning Outcome:
Key Skills On completion of this module, students should be able to:

- perform successfully and independently a number of experimental laboratory protocols used commonly in Developmental Biology and Genetics
- choose appropriate positive and negative controls for these experiments
- interpret the results of these experiments
- use a lab book to record experimental protocols, results, and analyses
- describe the purpose of the internship project, in particular with respect to the larger research program of the host laboratory
- summarize and critically analyze in a written report the findings obtained during the lab internship, and the conclusions drawn from these findings

Module BIO 662 Ethical issues in Human Genetics and Genomics
07SMBIO662 / Doktorandenseminar

Description:

General description:
This course addresses different types of ethical issues in the context of research in genetics and genomics. On the one hand we will discuss different case studies that illustrate moral problems and dilemmas that researchers in this field may encounter. On the other hand, we will talk about societal impact and consequences of research in genetic and genomics. We will particularly focus on ethical issues raised by these developments and the role and responsibility of scientists in these discourses. To prepare these practical discussions of ethical issues, the course also provides a general introduction to some central ethical theories and concepts.

ECTS: 1

Learning Outcome:
On successful completion of the course, the students should:

- Be familiar with some basic ethical theories and concepts.
- Be able to recognize ethical issues in societal debates.
- Be able to understand the difference between scientific and ethical issues and why the latter are more controversial.
- Be sensitized for ethical issues in everyday scientific work.
- Be aware for societal implications of research in genetics and genomics.
- Understand moral concerns raised by research in genetic and genomics.
- Be aware of the particular role as a scientist and expert in society.

Module Support and Accompany Learners at the Federal Vocational Baccalaureate School
06SM090LLB2 / Module

Description:

General description:
In dieser Veranstaltung werden anhand konkreter Fallbeispiele aus dem Unterricht an Berufsfach- und Berufsmaturitätsschulen pädagogische Prozesse analysiert sowie Lern- und Sozialisationsprozesse diskutiert. Hierbei steht einerseits die Rolle und Aufgabe der Lehrperson und andererseits die Berücksichtigung individueller Lebens- und Berufssituationen der Berufslernenden im Vordergrund. Theoriewissen wird vertieft und durch Erfahrungswissen sowie Handlungsoptionen aus der Praxis ergänzt. Das Erkennen von Ressourcen bei den Berufslernenden und deren Unterstützung und Förderung bilden wichtige Elemente der Veranstaltung. Der Heterogenität (kulturell, schulisch, individuell) wird besondere Beachtung geschenkt und das Individuum ins Zentrum gestellt.

ECTS: 3

Notes:
Das Modul ist Bestandteil der Berufspädagogischen Zusatzqualifikation (BPZQ) im Studiengang "Lehrdiplom für Maturitätsschulen" für Studierende mit einem Fach, das auch an der Berufsmaturität angeboten wird. Die BPZQ kann im Studiengang "Lehrdiplom für Maturitätsschulen" im Rahmen des Wahlpflichtbereichs absolviert werden. Für das Modul gilt (aufgrund übergeordneter Interessen der Akkreditierung des Zertifikats BpZQ) eine Präsenzpflicht. Neben den zu absolvierenden Leistungsnachweisen müssen mind. 80% der Lehrveranstaltungen des Moduls in Präsenz absolviert werden, damit die ECTS Credits gutgeschrieben werden können. Dieses Modul entspricht ex. "Lehr- und Lernort Berufsfachschule 2".

Learning Outcome:
- Die Studierenden kennen vielfältige Ansätze in den Bereichen individuelle Förderung, Binnendifferenzierung, Lern- und Problemlösekompetenz sowie konstruktive Fehler- und Kritikkultur und können diese lernförderlich einsetzen.
- Die Studierenden kennen alters- und entwicklungstypische Probleme von Lernenden in der Ausbildung, können diese angemessen adressieren und dabei Beratungsangebote und die gesetzliche Vertretung der Jugendlichen angemessen einbeziehen.
- Die Studierenden können in ihrem Unterricht auf die Lernerfahrungen der Schülerinnen und Schüler in der Berufspraxis sowie auf ihre verschiedenen Lebens- und Berufskontexte Bezug nehmen und diese als Ausgangspunkt für schulische und lebenslange Lernprozesse aufnehmen.
- Die Studierenden können das Erleben und Verhalten Jugendlicher in Schule, Berufs- und Arbeitswelt aus verschiedenen Perspektiven beschreiben und erklären.

Module Teaching at the Federal Vocational Baccalaureate School: Lesson Shadowing and Lesson Design.
06SM090LLB1 / Module

Description:

General description:
Das Modul besteht aus dem Besuch eines Seminars und dem Absolvieren von 4 Lektionen Hospitation an einer Berufsmaturitätsschule. Im Seminar werden Möglichkeiten zur Umsetzung der Vorgaben im Rahmenlehrplan für den Unterricht an der Berufsmaturität erarbeitet und diskutiert, z.B. Leitmotive des Berufsmaturitätsunterrichts, Rolle der Schullehrpläne, Schwierigkeiten und Herausforderungen des interdisziplinären Arbeitens, Aufgaben einer BM-Lehrperson, Besonderheiten des Qualifikationsverfahrens.
In den Hospitationsstunden und den diesbezüglichen Reflexionen betrachten die Studierenden vor dem Hintergrund der im Seminar erarbeiteten theoretischen Inhalte den Unterricht an Berufsmaturitätsschulen aus der Perspektive der Beobachterin bzw. des Beobachters. Ziel der Hospitationen ist es, die eigene berufliche Orientierung und den Rollenwechsel zur Lehrperson an Berufsmaturitätsschulen in der Praxis zu reflektieren und Stärken und Schwächen der Lernenden an Berufsmaturitätsschulen zu identifizieren und zu thematisieren.
Das Modul ist für Unterrichtende der Berufsmaturitätsschulen und Berufsfachschulen aller Richtungen konzipiert. Unterrichtserfahrung (z.B. Sek. I / Sek. II) ist von Vorteil.

ECTS: 3

Notes:
Die Studierenden organisieren die Hospitationsstunden an den Berufsmaturitätsschulen selbst. Im Seminar wird dazu Hilfestellung geboten. Das Modul ist Bestandteil der Berufspädagogischen Zusatzqualifikation (BPZQ) für Studierende mit einem LfM-Fach, das auch an Berufsmaturitätsschulen angeboten wird. Ausnahmen: - Studierende mit Unterrichtsfach Wirtschaft und Recht bzw. Wirtschaft und Gesellschaft absolvieren dazu die Fachdidaktik IV im Frühjahrssemester. - Studierende mit Unterrichtsfach Sport absolvieren das spezifische Modul "Lehr- und Lernort Berufsfachschule 1: Unterrichtsgestaltung (LfM Sport)" im Herbstsemester.

Learning Outcome:
- Die Studierenden können in ihrem Unterricht die Fachinhalte berufspädagogisch begründet auswählen, berufspädagogische Anforderungen der Unterrichtsgestaltung umsetzen sowie interdisziplinäre und fächerübergreifende Ansätze einbeziehen.
- Die Studierenden kennen verschiedene Formen und Verfahren der Leistungsbeurteilung und -rückmeldung sowie der Unterrichtsgestaltung und können diese unter Berücksichtigung der unterschiedlichen Lebens- und Berufskontexte der Jugendlichen umsetzen.
- Die Studierenden sind mit Inhalt und Bedeutung von Grundlagen wie der Berufsmaturitätsverordnung, Schullehrplänen, sowie Konzepten der Nachhaltigkeit, des lebenslangen Lernens oder der konstruktiven Fehler- und Feedbackkultur vertraut, und können diese auch für die Reflexion ihrer Rolle als Lehrperson nutzen.

Merkmale:

Responsible instructor: Katrin Kraus

Requirements:

Assessment: Portfolio: Schriftliche Arbeit und mündliche Prüfung. Die mündlichen Prüfungen zu den Hospitationen finden in den letzten Semesterwochen statt. Die konkreten Termine werden im Seminar UBM nach Absprache festgelegt. Das Modul wird als ‹bestanden› bewertet, wenn beide Elemente des Portfolios ‹bestanden› sind. Aktive Teilnahme an den Lehrveranstaltungen wird erwartet.

General description:
The course takes place at the Station Biologique de Roscoff (Bretagne, France). On daily excursions into the tidal zones during low tide, marine algae and associated invertebrates are collected and examined in the laboratory. The grasping of the depth-dependent zonation and the organismal diversity of the tidal coast belong to the aims of the course.
Students work in groups of two on projects they select from zoological and algological themes.

Die Schwerpunkte der beiden Module liegen dabei auf der Umsetzung allgemeindidaktischer und fachdidaktischer Erkenntnisse im Unterricht an Maturitätsschulen. Die Studierenden lernen Theorie und Praxis im Unterricht zu verbinden, verschiedene Unterrichtsmethoden und -mittel einzusetzen sowie ihren Unterricht zu planen, durchzuführen und zu reflektieren. Die Studierenden setzen sich mit den fachlichen Inhalten der gymnasialen Mathematik (Arithmetik, Algebra, Analysis, Stochastik) auseinander und lernen die gängigen Lehrmittel und -medien kennen. Die integrierten Übungen bezwecken eine Verknüpfung der fachlichen Inhalte mit den in der Fachdidaktik I behandelten Unterrichtsmethoden. Dabei wird immer auch das Spannungsfeld zwischen heuristischem und deduktivem Vorgehen thematisiert.

Module BIO 262 Evolutionary Morphology of Vertebrates - Issues and Methods
07SMBIO262 / Block Course

Description:

General description:
This course presents an overview of many of the comparative approaches to study organismic evolution of vertebrates in an evolutionary and ecological framework. Although the course deals with vertebrates in examples and case studies, many of the issues apply to other organisms as well. The main topics covered are: introduction to systematics and the analysis of morphological characters, morphometrics, the development and evolution of several organ systems (e.g., teeth, guts) or embryological structures (e.g., neural crest), growth, allometry, heterochrony, modularity and integration, comparative embryology, the importance of the fossil record, and the study of patterns of vertebrate evolution and palaeobiology.
Activities include talks by the course directors and associates, projects and presentations for participants, and many practical exercises involving study of specimens of different kinds (skeletons, embryos). Computer-based activities include those introducing basic systematic methods and 3D reconstructions of images generated by computer tomography scans or of embryological structures based on histology.

ECTS: 6

Notes:
DIE ANMELDUNG FÜR DIE BLOCKKURSE ERFOLGT UNTER https://www.mybioportal.uzh.ch

Key skills
On completion of this module, the students should be able to
- acquire and analyse data from a short investigation concerning the evolution of a character complex of a vertebrate group

Module BME 332 Metabolic Medicine
07SMBME332 / Block Course

Description:

General description:
Metabolic diseases have a model character in the study of human body functions. This practical course introduces examples of inborn metabolic diseases, which are addressed experimentally in small groups. To elucidate these diseases, human samples will be analyzed using different techniques including enzyme assays, immunoassays, HPLC and GC analyses with mass-spectrometry, and DNA sequencing. The results of the practical experiments will be presented at the end of the course by the participants.

ECTS: 6

Notes:

Module INI 402 Computational Vision
07SMINI402 / Lecture with Practical Exercises

Description:

General description:
This course focuses on neural computations that underlie visual perception. We study how visual signals are processed in the retina, LGN and visual cortex. We study the morpholgy and functional architecture of cortical circuits responsible for pattern, motion, color, and three- dimensional vision.
This course considers the operation of circuits in the process of neural computations. The evolution of neural systems will be considered to demonstrate how neural structures and mechanisms are optimised for energy capture, transduction, transmission and representation of information. Canonical brain circuits will be described as models for the analysis of sensory information. The concept of receptive fields will be introduced and their role in coding spatial and temporal information will be considered. The constraints of the bandwidth of neural channels and the mechanisms of normalization by neural circuits will be discussed.
The visual system will form the basis of case studies in the computation of form, depth, and motion. The role of multiple channels and collective computations for object recognition will be considered. Coordinate transformations of space and time by cortical and subcortical mechanisms will be analysed. The means by which sensory and motor systems are integrated to allow for adaptive behaviour will be considered.

Module INI 405 Neuromorphic Engineering II
07SMINI405 / Lecture with Practical Exercises

Description:

General description:
This course teaches the basics of analog chip design and layout with an emphasis on neuromorphic circuits, which are introduced in the fall semester course "Neuromorphic Engineering I".

This course teaches the basics of analog chip design and layout with an emphasis on neuromorphic circuits, which are introduced in the autumn semester course "Neuromorphic Engineering I". The principles of CMOS processing technology are presented. Using a set of inexpensive software tools for simulation, layout and verification, suitable for neuromorphic circuits, participants learn to simulate circuits on the transistor level and to make their layouts on the mask level. Important issues in the layout of neuromorphic circuits will be explained and illustrated with examples. In the latter part of the semester students simulate and layout a neuromorphic chip. Schematics of basic building blocks will be provided. The layout will then be fabricated and will be tested by students during the following fall semester.

ECTS: 6

Notes:
The administration is carried out at the ETH. UZH students who want to book the course must register at ETH as special students and book the course at ETH. The link to the registration can be found on the next page.

Learning Outcome:
Design of a neuromorphic circuit for implementation with CMOS technology.

Target Groups:
Registration in this class requires the permission of the instructors. Class size will be limited to available lab spots. Preference is given to students that require this class as part of their major.

Module AST 513 Physical Cosmology
07SMAST513 / Lecture with Practical Exercises

Description:

General description:
In this course (formerly known as theoretical cosmology), we study the history of our universe on large scales. We first discuss key cosmological observations that led to our standard model of cosmology, and we study in detail the origin and the evolution of the Universe such as inflation, big bang nucleosynthesis, and cosmic microwave background anisotropies. In the second part we learn (relativistic) perturbation theory and apply it to initial conditions, large-scale structure and weak gravitational lensing.

Module BIO 675 Life Sciences: Transcriptomics RNA-seq course
07SMBIO675 / Lecture with Practical Exercises

Description:

General description:
Next-generation sequencing (NGS) technologies have revolutionized many fields in biology and are changing the practice of medicine. As a joint state-of-the-art research and training facility of the ETH and the University of Zurich, the Functional Genomics Center Zurich (FGCZ) offers a five-day course hands-on practical. The aim is to help participants master fast developing NGS techniques. The practical consists of a library preparation starting from polyA enriched RNA, and a sequencing run on a bench top sequencer, together with an introduction to the analyses of the resulting data and exercises. The lectures cover NGS technologies, their applications and data analysis principles. An entire module has been added for single cell transcriptomics data analysis.

ECTS: 2

Notes:
For further information please check our website https://fgcz.ch/education/transcriptomicsCourses.html

Room: at FGCZ Y59

Learning Outcome:
By the end of this course, participants should be able to
-Summarize the principles of current Next Generation Sequencing (NGS) technologies
-Analyze differentially expressed genes using an RNA-seq workflow
-Critically evaluate sequencing and analysis results
-Design an appropriate RNA-seq workflow to apply to their own research project

General description:
This course teaches the scientific identification and documentation of the flowering plants of Switzerland and addresses the ecological conditions in the different habitats. It takes place in the Botanical Garden Zurich and on several excursions in the surroundings of Zurich and the adjacent Aargau. It consists of three consecutive blocks. Week 1 (also bookable as EEE 539): You will become familiar with the classification system of flowering plants and learn the characteristics of about 30 important plant families. Week 2 (also bookable as EEE 361 with appropriate prior knowledge): On field trips, you will learn the characteristics and ecological properties of the most important 200 species of vascular plants of the midlands. Week 3 (individual projects and field excursion to the Alps): You will identify and document plants in the field. You will use the collected data for a report on the plant diversity of the field trip area.

ECTS: 6

Module CMS 103 Communication Skills for Leaders
07SMCMS103 / Kurs

Description:

General description:
Demands on today's leaders in science and business continue to get higher and higher. In addition to proven professional skills, so-called soft factors are becoming increasingly important, and are often decisive for individual careers.
No matter whether we want to successfully lead a group, recruit new colleagues, convince potential investors or funding sources about a research project, or negotiate with customers and suppliers: communication is an essential part of daily life.
We talk to each other, listen to each other, write, read, and exchange non-verbal signals. We constantly convey and reveal information while we are in contact with other people - consciously and deliberately, but also unintentionally and unknowingly.
The CMSZH Graduate School aimes at providing optimum development opportunities for you as future top leaders and researchers. We have designed a two-day communication course, in cooperation with an external partner. The program is tailored to meet your needs.
In the course you will learn how to

- give convincing presentations and inspire your audience

Module Subject Didactics Computer Science III (3 ECTS)
06SM090In33 / Module

Description:

General description:
Im Modul Fachdidaktik III wird am Beispiel ausgewählter Unterrichtssituationen oder Unterrichtsthemen das in den Modulen Fachdidaktik I und II erworbene Wissen unter weiterem Einbezug von fachdidaktischer und erziehungswissenschaftlicher Forschung ergänzt und vertieft. Studierende mit zweitem bzw. zusätzlichem Unterrichtsfach erbringen eine zusätzliche Leistung, in welcher das erworbene Wissen im Hinblick auf den Unterricht umgesetzt wird, und buchen daher das Modul mit 4 ECTS Credits. Das Modul FD Informatik III legt den Schwerpunkt auf den eigenen Unterricht. Unterricht wird konkret vorbereitet, durchgeführt und nachbesprochen. Eigene Unterrichtsmaterialien werden erstellt. Methodisch wird mit Fallbesprechungen und Video-Analysen gearbeitet. Ein weiteres Thema ist die Leistungsbeurteilung im Unterricht.

Module Cooperative Teaching Arrangements: Importance for Pupils' Learning and the Supportive Role of the Teacher
06SM222KOU / Module

Description:

General description:
Sozial-interaktive, kooperative Lernformen sind im Schulunterricht sowohl Methode als auch Ziel. Sie vermitteln idealerweise nicht nur Wissen und Fertigkeiten in den Unterrichtsfächern, sondern auch soziale Kompetenzen und Fähigkeiten zur Selbstregulation und zum selbst gesteuerten Lernen. Im Seminar werden etliche Formen kooperativer Lehrarrangements vorgestellt und ausprobiert. Dabei werden drei grundlegende Elemente dieser Inszenierungsformen hinterfragt, nämlich inwiefern die Aufgabenstellung der Tiefenstruktur des Verstehensinhaltes angepasst ist, welche Lernstrategien Lernende dabei erwerben, und welche Rolle die Lehrperson dabei innehat. Sich als Lehrperson bei der Unterstützung einzelner Lernender oder Kleingruppen anhand von zentralen Kriterien zu beobachten, ist zudem ein geeignetes Mittel, seine Unterrichtskompetenz zu verbessern.

Module FIM 102 Mathematical Finance I
07SMFIM102 / Lecture with Practical Exercises

Description:

General description:
This course provides an introduction to the mathematical models used to describe the evolution of financial markets. These models have many practical applications. In particular, they are involved in a fundamental way when one needs to give a fair price to options or derivatives. The main part of this course is focused on discrete time models, where the dynamics of the prices of the different assets is only modelled on a discrete time grid. These models have the advantage that one can study them without dealing too much with technicalities, yet they capture the key aspects of the modern derivative pricing theory. In the last part of the course, we give an introduction to the most classical (continuous) model, i.e. the Black-Scholes model, which involves a particular random process, called Brownian motion, that is one of the most fundamental objects in probability theory. Throughout the semester, the mathematical theory will be complemented by discussions on the functioning of modern financial markets and the role they play in the economy.

ECTS: 6

Notes:
Mathematical Field: Stochastics

Elective Module for Mathematics (formerly known as MAT519) and Compulsory Module for the Minor in Financial Mathematics.

Target Groups:
- Students with a Minor in Financial Mathematics
- Mathematics Master Students and Bachelor Students in their 5th Semester and higher

Course Materials:	"Introduction to the Mathematics of Finance" by R.J. Williams "PDE and Martingale Methods in Option Pricing" by Andrea Pascucci
Merkmale:	Target Group: Suitable for English Speakers
Responsible instructor:	Delia Coculescu

Requirements:

Prerequisites:	For the Minor Study Program in Financial Mathematics you will need to have taken FIM101 Computational Probability and Simulation. As an Elective in Mathematics you will need to have taken MAT901 Stochastics. The minimum requirement for the course is to be familiar with basic modern probability theory, as done in "[MAT901] Stochastik", or equivalently as in Jacod, Protter "Probability Essentials" (Chapters from 1 to 22). Knowledge of measure theory is required.

Module PHY 420 Electron Spectroscopy
07SMPHY420 / Lecture with Practical Exercises

Description:

General description:
Electron spectroscopies are key techniques to explore the fundamental atomic and electronic properties of condensed quantum matter (atomic structure, localized and delocalized electron states, many-body interactions, etc) which drive functionality of the electronic, spintronic and quantum devices. Targeted mainly at experimental physicists, the course introduces the fundamental theoretical and experimental concepts of electron spectroscopies. It covers photoelectron methods (informing chemical composition, catalysis, electronic band structure, spin texture and, in pump-probe experiments, out-of-equilibrium processes), scanning tunneling microscopy (atomic and local electronic structures) and quantum twist microscopy (band-structure insight into low-dimensional materials). A tour of the Swiss Light Source will be an optional part of the course.

Contents

- Electron detectors and analyzers, electron and photon sources (laboratory-based, synchrotrons and X-ray lasers)
- Elemental analysis by X-ray photoelectron spectroscopy (XPS) and Auger electron spectroscopy (AES)
- Surface chemistry and catalysis by ambient-pressure XPS (AP-XPS)
- Electronic band structure and quasiparticle interactions by angle- resolved photoelectron spectroscopy (ARPES)
- Magnetic texture by spin-resolved ARPES
- Electronic-structure dynamics by time-resolved ARPES (tr-ARPES)
- Atomic structure by scanning tunneling microscopy (STM) and local electronic structure by scanning tunneling spectroscopy (STS)
- Quantum Twist Microscopy (QTM)

ECTS: 6

Notes:
http://www.physik.uzh.ch/lectures/electronspec/

Email address Vladimir Strokov: vladimir.strokov@psi.ch.

Learning Outcome:
-
Become familiar with the various electron spectroscopy techniques, their fundamentals and typical application fields
-

Understand the theoretical concepts of electron spectroscopies directly linked to the atomic and electronic structure properties of condensed matter
-

Get insight into workings of analytical instrumentations such as scanning electron microscopes, electron and photon sources including synchrotrons, electron analyzers
-

Master the essential methodology, e.g. how to find out the local electronic structure, explore elemental and chemical-state composition, resolve electronic band structure and quasiparticle interactions over electron-momentum space, explore out-of-equilibrium electronic processes.

Challenging? No worries—by the end of the course you will be masters of spectroscopic science and methodology.

Description:

General description:
Students will be introduced to contemporary issues in bioethics, including research ethics, reproduction ethics, end-of-life ethics, transplanation ethics, ethics of enhancement, etc. Furthermore, students will be provided with tools for argumentation by examining in detail different types of arguments in these debates (such as analogy- arguments, slippery-slope arguments, the use of thought-experiments, appeals to false dilemmas, ad absurdum-arguments,etc.).

ECTS: 3

Learning Outcome:
Familiarity with contemporary issues in bioethics and introduction to argumentation theory

Participants are expected to have read all texts. To fulfill the requiremen of active participation, students need to prepare 3 questions about the texts for every session and, in addition, to write one short essay on a topic they choose.

Course Materials:	The literature that will be discussed in the course will be provided in advance. Students will get an email with instructions. For a general introduction and reader, see Tom L. Beauchamp et. al. (2008): Contemporary Issues in Bioethics, London: Thomson/Wadsworth. It is not required to have read the book in advance.

Module Decision Neuroscience (S)
03SMDOEC0133 / Doktorandenseminar

Description:

General description:
This seminar provides an introduction to different aspects of decision neuroscience by exploring the neural processes and computations that underlie decision making in humans, non-human primates, and rodents. The seminar will begin with a brief introduction to methods in neuroscience and economics and outline neural and economic theories of decision making. Discussions of specialized topics will ensue, covering issues such as neural representations of valuation, strategic decisions, learning, social decision making, perceptual decisions, and multiplicity of decision-making systems. The seminar will be divided between overview lectures, student presentations of research papers, and general discussions of how neural data can inform theories of decision making.

Module BIO 368 Scientific Information Literacy
07SMBIO368 / Course

Description:

General description:
How does the information flow in the scientific community? What is a credible scientific source? How can Artificial Intelligence (AI) tools be used to search for scientific information?

The effective and efficient use of reliable information sources is essential both for your current and future scientific research activities.

Being information literate means organising the process from the need for information to the publication - creatively, consciously, critically and based on your needs. The course will be practice-oriented and accompany you through the information process and data life cycle: from searching for scientific information and data, to managing it, and using it for your seminar, study work or thesis.

ECTS: 3

Notes:
Bring your own computer. The course will be held in Y25-H-26.

Learning Outcome:
The students:

- obtain an overview how the information process within the scientific community works and who the most important players are.
- understand how the scientific publication process (peer review) works.
- obtain the needed information using appropriate methods effectively and efficiently: tools for finding information, search strategies and techniques.
- select and use appropriate information sources for the scientific working process like Google Scholar, PubMed or Scite.ai.
- use AI in an effective and responsible manner and provide transparent disclosure of its application.
- can critically evaluate scientific sources.
- receive methods and tools how to write scientifically.
- manage and elaborate the selected information with the reference management software Zotero.
- cite the information sources correctly to avoid plagiarism.
- obtain an overview of why research should be open (Open Science) and publications freely available (Open Access), and what the benefits for (young) scientists are.
- receive tips and tricks how to manage research data.

Module Personnel and Labor Economics for Education Economists (S)
03SMDOEC0172 / Doktorandenseminar

Description:

General description:
Personnel Economics differs from conventional Labor Economics in that it focuses on what happens inside firms and organizations. It deals with employment contracts, wage structures, employer-employee interactions and other issues related to the workplace. A central area of research is concerned with how to structure jobs and incentives inside firms to achieve desirable outcomes for employers as well as employees. This course will present and discuss some of the key topics in Personnel Economics research and the latest developments therein.
In addition, the course will also cover selected topics in Labor Economics related to the Personnel Economics literature.

Module PHY 432 Physics with Muons: From Atomic Physics to Solid State Physics
07SMPHY432 / Lecture with Practical Exercises

Description:

General description:
Introduction and overview on the muon physics. Focus on the applications of polarized muons as microscopic magnetic probes in solid-state physics (muon spin rotation and relaxation methods). Examples from current research in magnetism, superconductivity, semiconductor physics and investigations of thin films and multilayers.

Content:

Muon properties; Generation of muon beams. Muon decay; Muon-spin spectroscopy basics (muon spin rotation / relaxation / resonance); Static and dynamical spin relaxation. Applications to Magnetism: Local magnetic fields, phase transitions. Applications to superconductivity: Measurement of the magnetic penetration and coherence lengths; phase diagram of high-temperature superconductors, vortex matter Muonium: Hydrogen states in semiconductors Thin film and surface investigations with low energy muons

ECTS: 6

Notes:
More Information can be found here:

https://www.physik.uzh.ch/en/teaching/PHY432/

Learning Outcome:
Positive and negative muons have many uses in various fields of physics.
As building blocks of the standard model, they play a fundamental role in particle physics. The positive muon is used as a microscopic magnetic specimen in solid-state. In this lecture, an introduction and an overview of the physical questions that can be addressed with muons are offered. Particular emphasis is placed on applications in solid-state physics and materials research (muon spin rotation and relaxation methods, muSR). Recent examples from research in magnetism, superconductivity, investigation of thin films are addressed.

Target Groups:
The lecture targets Bachelor and Master students with an interest in solid state physics as well as particle physics. It is especially well suited for people who are interested in an internship or in a Bachelor / Master thesis / PhD thesis in Muon Spin Spectroscopy Research at the Paul Scherrer Institute.

Module BIO 249 Research Internship in Quantitative and Systems Biology
07SMBIO249 / Praktikum

Description:

General description:
Participating students work under individual guidance of an advanced researcher (PhD student, postdoc, group leader) on a specific defined research project and write a scientific report upon completion of the project. Thereby students acquire practical and theoretical insight into actual cutting edge research in Quantitative and Systems Biology.

The research projects are performed in a research group and should be arranged directly with a group leader, before contacting the module leader. Work plan and evaluation of performance are individually arranged with the group leaders.

ECTS: 4

Notes:
Only for advanced Bachelor students. Students must arrange their research internship directly with a research group leader. Minimum duration is 4 weeks full time, but internships of at least 6 weeks duration are preferred. ECTS credits are according to duration, 1 ECTS per week full time internship.

Learning Outcome:
Key Skills On completion of this module, students should be able to

- perform successfully and independently a number of experimental laboratory protocols used commonly in Quantitative and Systems Biology
- choose appropriate positive and negative controls for these experiments
- interpret the results of these experiments
- use a lab book to record experimental protocols, results, and analyses
- describe the purpose of the internship project, in particular with respect to the larger research program of the host laboratory
- summarize and critically analyze in a written report the findings obtained during the lab internship, and the conclusions drawn from these findings

Module MDS 101 Introduction to Molecular Design and Synthesis
07SMMDS101 / Lecture with Practical Exercises

Description:

General description:
MDS 101 is a survey course presenting topics that fall broadly into the category of Molecular Design and Synthesis. Various participating faculty will present overviews about creativity in chemical research or about their research fields, emphasizing the importance of molecular- level understanding of structure to the manifestation of structure and function on different scales, from small molecules to proteins, polymers, solid materials and cells. The course will include a presentation from each student on their own area of research.

Module MAT 005 Coding Theory
07SMMAT005 / Lecture with Practical Exercises

Description:

General description:
An introduction into algebraic coding theory. Topics to be covered are:

- Linear Block Codes, general properties and decoding algorithms
- Convolutional Codes
- Codes on Graphs

Modern coding theory started in 1948 with the work of Shannon. The field has an information theoretic component and an algebraic component. In this course we will concern ourselves mainly with the latter part. In the algebraic sense, a block code can be viewed as an algebraic subset of an affine space oaver a finite field, hence techniques of algebraic geometry can be fruitfully applied to the study of codes. In a second part of the course we will study convolutional codes and codes on general graphs.
We plan to treat the following topics:

Linear Block Codes, general properties

- Hamming Codes
- Cyclic Codes
- MDS Codes
- Golay Codes
- Reed-Solomon Codes
- BCH-Codes
- AG-Codes and Goppa Codes
- Decoding via Berlekamp-Massey algorithm

Convolutional Codes

- Module Theoretic Description
- Systems Theoretic Description
- Construction of Convolutional Codes
- Decoding of Convolutional Codes

Codes on Graphs

- LDPC Codes
- Turbo Codes
- General Codes on Graphs
- Decoding Algorithms
- Algebraic Construction of Codes on Graphs

Description:

General description:
The objective of the Master's Research course is, over a 3 semester period, to complete a Master's research project, prepare a written thesis, complete an oral examination and make a public presentation of the thesis work (60 KP total). In each semester of the program, students have to attend MDS 201.1, Laboratory Research. In the final semester (typically the 3rd semester) the students must additionally complete MDS 201.2 (Master's Thesis and Defense) and MDS 201.3 (Master's Exam). MDS 201.1 accounts for the execution of the individual research project. MDS 201.2 accounts for the preparation of a formal written Master's thesis and an associated public Defense. MDS 201.3 accounts for an oral evaluation of the student's scientific development by a committee of the faculty. A single Note is assigned for completion of MDS 201.

Module Elective Module: Imaging methods
04SM93MAS423 / Sonstiges

Description:

General description:
Bildgebende Methoden spielen Diagnose, Therapieentscheide, Therapie- Monitoring, Diagnose-Ausschluss, Clinical Trials, perkutane Gewebegewinnung und Therapie eine immer wichtiger Rolle.
Auf verschiedenen Gebieten hat in den letzten Jahrzehnten eine beträchtliche technische Innovation stattgefunden. Die Vielfalt der Methoden erfordert ein immer breiteres technisches und physikalisches Wissen. Auch steigen die Anforderungen an Kenntnisse von Sicherheitsmassnahmen (z.B. Strahlenschutz, Sicherheitsmassnahmen im MR-Bereich).
Die Frontalvorlesungen können nur einen ersten Einblick in solche Fragen geben. Die praktischen Radiologie-Kurse richten sich eher auf die Diagnosefindung aus als auf die Beschreibung des technischen Hintergrundes.
Im Mantelstudium Bildgebende Methoden sollen die physikalischen Hintergründe, die technischen Parameter und deren Einfluss auf die Bildgebung, Sicherheitsmassnahmen sowie relevante Bildartefakte und deren Korrekturmöglichkeiten erarbeitet werden.
Jeder teilnehmende Studierende soll unter Anleitung durch den Dozenten ein 10-Minutenreferat zu den physikalischen Grundlagen vorbereiten und jeweils am Anfang des Gruppenpraktikums präsentieren. Die Dozenten sollen diese Vorträge kommentieren und ergänzen. Ein grosser Teil jedes Blocks ist für praktische Anwendungen vorgesehen, um die technischen Parameter, Sicherheitsmassnahmen und Artefakte zu verstehen. In einer Schlussveranstaltung am Schluss des Mantelstudiums soll das erarbeitete Wissen im Plenum präsentiert werden.
Das Modul wird ab Herbstsemester 2010 angeboten.

ECTS: 4

Notes:
Veranstaltungstermine und weitere Infos: siehe http://www.vam.uzh.ch > Mantelstudium

Learning Outcome:
1. Verstehen der physikalischen Grundlagen der wichtigsten bildgebenden Methoden
2. Kennen der typischen Bildakquisitionsparameter und deren Einfluss auf die Bildgebung
3. Verstehen und kennen von Sicherheitsmassnahmen, die für die verschiedenen bildgebenden Methoden erforderlich sind
4. Kennen der wichtigsten Artefakte und deren Korrekturmassnahmen
5. Können die oben genannten Aspekte einem Patienten erklären und seine Fragen beantworten.

Module Elective Module: Communication of benefits and risks
04SM94MAS424 / Sonstiges

Description:

General description:
In der Medizin, dem Wissen über den Gesundheitszustand eines Patienten, spielen Wahrscheinlichkeiten eine zentrale Rolle. Diagnose ist das Wissen über die Wahrscheinlichkeit einer Erkrankung, Prognose ist das Wissen über die Wahrscheinlichkeiten des weiteren Verlaufs einer Erkrankung und Ätiologie ist das Wissen über die Wahrscheinlichkeiten ursächlicher Faktoren einer Erkrankung.

In der Medizin ist das Wissen praktisch immer probabilistischer und nur selten deterministischer Natur.

Die Herausforderungen für einen Arzt sind erstens die korrekten Wahrscheinlichkeiten zu kennen, die Begriffe in den die Wahrscheinlichkeiten quantifiziert werden zu kennen und zu verstehen, und über diese Wahrscheinlichkeiten mit dem Patienten adäquat zu kommunizieren. Wahrscheinlichkeiten sind immer mit Unsicherheit assoziiert.

Das notwendige Wissen und die dazu erforderlichen Fähigkeiten sind bei den Ärzten, wie verschiedene Studien gezeigt haben, nicht oder nur unzureichend vorhanden. Meines Wissens werden diese Inhalte während der Medizinstudiums nicht oder nur unzureichend gelehrt.

Die Absicht ist ein Modul für das Mantelstudium zu planen und gemeinsam mit anderen Interessierten anzubieten. Das Modul wird ab Herbstsemester
2010 angeboten.

ECTS: 4

Notes:
Veranstaltungstermine und weitere Infos: siehe http://www.vam.uzh.ch > Mantelstudium

Learning Outcome:
1. Verstehen des Begriffs der Wahrscheinlichkeit und deren unterschiedliche Bedeutungen (subjektive versus frequentistisch, objektive Probabilität). Die Resultate der Forschung, und auf diesem Wissen basiert die Medizin, produziert objektive Wahrscheinlichkeiten, die für Patienten so aufbereitet und transformiert werden müssen, dass sie diese Informationen für ihre Entscheidungen verwenden können.
2. kennen und verstehen die unterschiedlichen Arten der numerischen Darstellung von Probabilitäten (Risiken in Form von ARR, RR, RRR, odds; Sensitivität, Spezifität, natürliche Häufigkeiten am Beispiel des Screening), base rate

3. können die Wahrscheinlichkeiten graphisch darstellen um sie den Patienten besser und verständlicher zu erklären
4. können die Wahrscheinlichkeiten dem Patienten im Gespräch erklären
5. kennen die Konzepte des (shared und informed decision makin✳ und üben deren Anwendung.

Module Subject Didactics Economy and Law V
06SM090WiRe5 / Module

Description:

General description:
In dieser Lehrveranstaltung werden komplexe Unterrichtsarrangements entworfen, die eine Auswahl und Synthese der verschiedenen Lehr- Lernformen verlangen. Das Modul KLLA basiert also hauptsächlich auf Modul 3 (Lehr- und Lernformen in Wirtschaft und Recht) sowie auf den Grundlagen aus den Veranstaltungen Fachdidaktik Wirtschaft und Recht 1/2. Nach einer kurzen theoretischen Einführung und mit Hilfe eines Leitfadens erstellen die Studierenden selbständig komplexe Lehr-Lern- Arrangements. Die Erstellung erfolgt schrittweise. Unter anderen soll dabei auch aufgezeigt werden, wie digitale Hilfsmittel diesen Problem- Based-Ansatz unterstützen können. Die Teilnehmer erhalten für die erstellten Teilprodukte schriftliches und mündliches Feedback, welches bis zur Vollendung des KLLA in das Produkt einfliessen soll.

ECTS: 4

Learning Outcome:
Die Studierenden können am Ende des Moduls: - Komplexe Lernumgebungen systematisch und lernzielorientiert erstellen - Komplexe Lernumgebungen anhand verschiedener Kriterien/Ziele kritisch reflektieren - Komplexe Lernumgebungen vor dem Hintergrund didaktischer Ziele rechtfertigen - Digitale Hilfsmittel auswählen, die das KLLA sinnvoll unterstützen - Schwierigkeiten und Chancen, die sich aus dem Einsatz von KLLA ergeben, erkennen und benennen.

Merkmale:

Responsible instructor:	Patrick Hunn

Requirements:

Prerequisites:	Um Fachdidaktikkurse im Studiengang «Erweiterungsdiplom über ein zusätzliches Unterrichtsfach» besuchen zu können, müssen mindestens 30 ECTS Credits des Fachstudiums absolviert sein. Voraussetzung für den Besuch von FD W+R V ist das erfolgreiche Absolvieren von FD W+R I und FD W+R III.
Assessment:	Portfolio: - Unterrichtsbesuch in zwei Lektionen, in denen ein KLLA durchgeführt wird. - Die Studierenden präsentieren ihre Teilergebnisse der Kursleitung oder im Plenum. Die Teilaufträge zur Erstellung eines KLLA müssen zufriedenstellend und rechtzeitig erfüllt werden. - Das fertiggestellte KLLA muss den Anforderungen der Kursleitung entsprechen. Das Modul wird als bestanden bewertet, wenn die zwei Elemente des Portfolios bestanden sind. Während der Präsenztage wird eine aktive Mitarbeit erwartet. ---

Description:

General description:
Die Veranstaltung ist praxisorientiert. Nach einer kurzen theoretischen Einführung durch den Kursleiter nehmen die Studenten als Beobachter an einem Labor-Experiment teil. Das Experiment wird durch einen erfahrenen Untersucher durchgeführt. Anschliessend werden Auswertung und Interpretation mit den Studenten besprochen und erläutert. Die Veranstaltung schliesst mit einer halbstündigen freien Diskussion mit dem Kursleiter über das zu dem Experiment gehörige Gesamtprojekt der jeweiligen Institution. Bei Untersuchung von Probanden sind gegebenenfalls separate Erklärungen zur ärztlichen Schweigepflicht und zum Datenschutz erforderlich. Die Unterrichtssprache ist in der Regel Deutsch - einzelne Kursvormittage können aber teilweise oder ganz in Englisch gehalten werden.

Der Modulleiter führt am Anfang des ersten Kurstages in die Ziele und Abläufe des Lehrangebots ein und nimmt an der Abschlussdiskussion des letzten Kurstages teil. Er nimmt Feedback der Studenten entgegen und bietet eine zusätzliche Diskussion zu übergreifenden Themen der psychiatrischen Forschung an.

Learning Outcome:
Die Studenten lernen aktuelle wissenschaftliche Methodik zur Erforschung der Ätiologie psychiatrischer Erkrankungen sowie zur Verbesserung der Frühdiagnostik und zur Entwicklung neuer therapeutischer und präventiver Ansätze kennen. Der Schwerpunkt dieses Lehrangebots liegt auf dem Einblick in die experimentell-methodischen Aspekte der Forschung und deren Anwendung im Rahmen von Studien in Tiermodellen (transgene Mäuse) sowie im Rahmen von Clinical Trials an Patienten mit psychiatrischen Störungen. Die demonstrierten Methoden umfassen transgene Mausmodelle, Systembiologie, Genetik, Elektrophysiologie, Magnetresonanztomographie und experimentelle Psychologie.

Description:

General description:
Die Gestaltung dieses Lehrangebotes ist praxisorientiert und fördert die aktive Teilnahme der Studierenden. An jedem Vormittag gibt es eine theoretische Einführung, Patientenvorstellungen, interaktive Diskussionen und ein Kurzreferat von Studierenden (Ausnahme: Kein Referat am 1. Vormittag). Weitere Lehrmethoden, wie Rollenspiele oder
Kleingruppenarbeit, können je nach Referent und Verlauf der Veranstaltung zum Einsatz kommen. Es werden den Studierenden am ersten Vormittag insgesamt 6 Referatsthemen (die Inhalte beziehen sich auf die Vormittage 2-7) vorgestellt und die Studierenden werden in Gruppen eingeteilt (5 Studierende pro Referatsthema). An den Vormittagen 2-
7 wird dann je ein Referat präsentiert und anschliessend diskutiert (also zum Bespiel am 2. Vormittag ein Referat zu einem Thema der kognitiven Verhaltenstherapie). Die 5 Referierenden fungieren bei der Diskussion als die Experten für ihr Thema (ggf. unterstützt durch den jeweiligen Kursleiter), die anderen Studierenden stellen Fragen.

ECTS: 4

Notes:
Veranstaltungstermine und weitere Infos: siehe http://www.vam.uzh.ch > Mantelstudium

Aufgaben als Modulleiter:
Vor Beginn des Moduls
o Absprache der Referatsthemen mit den einzelnen Dozenten.
Am ersten Kurstag
o Einführung der Studierenden in die Ziele und Abläufe des Lehrangebotes.
o Einteilung der Studierenden für die Referatsthemen am ersten Kurstag, nachfolgend Information der anderen Dozenten über die Gruppeneinteilung.
Am Ende des letzten Kurstages
o Entgegennahme von Feedbacks der Studierenden.
o Zusammenfassung der Lerninhalte des Moduls und der

Learning Outcome:
Die Studierenden lernen wissenschaftlich anerkannte Psychotherapieverfahren und ihre Anwendungsmöglichkeiten im Rahmen von ärztlichen Tätigkeiten kennen. Sie bekommen Einblick in die psychotherapeutische Diagnostik und daraus abgeleitete Behandlungsstrategien. Die Lernziele der einzelnen Vormittage bauen aufeinander auf: Zu Beginn geht es um allgemeine Aspekte ärztlicher Psychotherapie, nachfolgend werden spezifische Verfahren vorgestellt und im dritten Teil des Moduls dann um deren Anwendung in speziellen Behandlungsfeldern. Am Ende dieser Lehrveranstaltung können die Studierenden ärztlich-psychotherapeutische Basisfertigkeiten beschreiben und deren Bedeutung für die Behandlung von somatisch wie auch psychisch kranken Menschen erläutern.

Module STA 427 Statistical Methods in Infectious Disease Epidemiology
07SMSTA427 / Course

Description:

General description:
Infectious diseases continue to shape human health worldwide—from fast-spreading respiratory infections like COVID-19 and influenza, to sexually transmitted infections such as HIV and syphilis, and vector-borne diseases like malaria and dengue. Each epidemic is characterized by distinct transmission routes, epidemiological dynamics, and control challenges. This course provides an introduction to statistical approaches for studying infectious disease dynamics, with a focus on integrating different mathematical models and empirical data to characterize the underlying biological and social processes. This course provides an overview of the methodological foundations as well as their application to real-world public health concerns.

Contents of the course are as follows:

Introduction to infectious disease epidemiology, Deterministic and stochastic compartmental (SIR-type) models, Simulation and inference, Reproduction numbers, Incubation period, Serial interval, Generation time, Delays, Back calculation, Nowcasting, Vaccination: effectiveness, efficacy and safety, Temporal and spatio-temporal detection of transmission clusters

ECTS: 3

Learning Outcome:
Upon completing this course students will be able to:

- formulate, understand, and analyse statistical models used in infectious disease research
- incorporate appropriate biological, behavioural, immunological, virological, medical, and demographical aspects in their models, discuss the differences between modelling approaches to compare and contrast them
- understand topics of interest to policy makers

Module STA 408 Statistical Methods in Epidemiology
07SMSTA408 / Lecture with Practical Exercises

Description:

General description:
We focus on the statistical analysis of health data which are collected in observational settings such as case-control or cohort studies. The most relevant measures of effect (risk, odds and rate ratios) are introduced, and methods for adjusting for confounders (Mantel-Haenszel and regression approaches) are thoroughly discussed. Specialized methods such as propensity score adjustments and conditional logistic regression are introduced for the analysis of matched data. Advanced topics such as causal inference with graphical models, imputation and measurement error are also covered.

Module Scientific Writing for PhD Students (S)
03SMDINF4001 / Block Course

Description:

General description:
This course aims to help you develop an awareness of the theory and practice of academic writing at PhD level. The main focus is on the conventions of scientific academic writing; text structures and typical language features of scientific texts; basic techniques to increase the clarity and readability of your writing; and on relevant grammatical issues and essential areas of vocabulary. Working individually, in pairs, and in small groups, instruction isbased on text analysis, writing exercises, collaborative writing, and peer review. This course is particularly suitable if you have less experience in writing scientific academic texts. This course is also suitable if you would like a greater focus on grammar and vocabulary for academic writing. To benefitfrom the course fully, you should be in the process of the writing scientific documents or articles.
This course can be taken in conjunction with Scientific Writing II: Publishing Papers in Computer Science or as a stand-alone course.

Module Macroeconomics for Research Students Part I (Ph.D.) (L+E)
03SMDOEC0380 / Lecture with Practical Exercises

Description:

General description:
This course is an introduction to macroeconomic theory at the PhD level. We develop tools that are commonly used in macroeconomics but also other areas of economics, notably recursive methods and discrete and continuous time dynamic optimization. We apply these tools to some of the most important topics of macroeconomics, including general equilibrium with complete and incomplete markets, consumption-savings problems, investment, dynamic contracts, fiscal policy, economic growth and climate macroeconomics.

Module BME 326 Evolution of Bacterial Pathogens
07SMBME326 / Block Course

Description:

General description:
Bacteria adapt quickly to new environments and the host. While biologically interesting, bacterial evolution reflects a major medical problem as treatments that work today might fail tomorrow. This block course focuses on the evolution of human pathogens at the molecular and population level, and examines adaptation to antibacterials, hosts, and co-infecting pathogens.

ECTS: 6

Notes:
Registration for blockcourses here:
https://www.mybioportal.uzh.ch

This course entails work with an opportunistic pathogen. While the planned work is safe for healthy persons, immunocompromised students should first contact the course organizer before registering.

Veranstaltungsort: Y-38-M-72

Learning Outcome:
Subject-specific learning outcomes:
By the end of the module, students should be able to:

- explain the details of evolutionary theory
- apply this theory to specific problems, such as the evolution of antibiotic resistance in bacteria
- evaluate how the host environment, co-infecting pathogens, and microbe-microbe interactions can shape the evolution of virulence
- conduct phenotypic assays and basic molecular work with bacteria
- work safely and competently with bacteria at security level 2

Key skills
By the end of the module, students should be able to:

- design their own scientific experiments (including planning of experiments, data collection, processing and analysis)
- present research results both orally and as a poster
- critically evaluate scientific papers

Module BIO 630 Ethics in Scientific Practice
07SMBIO630 / Lecture with Practical Exercises

Description:

General description:
In this interactive lecture we discuss different societal and ethical issues in biomedical research. After a brief introduction to ethics more generally, we will discuss the role and responsibility of scientists in society, for instance, with respect to applications of genome editing tools. We further discuss ethical issues in research that involves humans and animals and we close the lecture with an ethical perspective on various topics of good scientific practice.

ECTS: 3

Learning Outcome:
On successful completion of the course, the students should:

- Be able to discuss moral dilemmas in scientific practice
- Be able to analyse arguments in an ethical debate and associate them with basic ethical theories
- Be sensitized for societal concerns and worries concerning the current and future development of scientific research and technological applications.
- Be able to report the basic rules of responsible conduct in science as stated in various codes of conducts
- Be able to apply rules of scientific conduct to their own design, conduct, evaluation and publication of experiments.

Key skills:
On successful completion of the course, the students should

- Be able to explain the differences between scientific and ethical questions and approaches.
- Be aware of a scientist's responsibilities towards society, the scientific community, colleagues and research subjects.
- Be able to avoid unintended falsifications and plagiarism in their work.

Module Elective Module: Philosophy for Medical Professionals
04SM12MAS510 / Sonstiges

Description:

General description:
Was ist der Mensch?
Eine Einführung in die medizinische Anthropologie.

Die Vorstellung davon, was eine Krankheit ist, und wie sie behandelt werden soll, hängt stark von der jeweiligen Vorstellung ab, was ein Mensch sei, für Immanuel Kant die zentrale Frage der Philosophie überhaupt. Es macht beispielsweise einen Unterschied, ob wir den Menschen als eine Maschine oder als psychosomatischen Organismus verstehen. Die Anthropologie ist der Zweig der Philosophie, der sich mit dieser Frage beschäftigt. Wir werden in diesem Kurs in impliziten und meist unbewussten Menschenbilder der Medizin heute und in der Vergangenheit untersuchen.

Module BIO 680 DNA Next Generation Sequencing – from theory to practice
07SMBIO680 / Lecture with Practical Exercises

Description:

General description:
Next-generation sequencing (NGS) technologies have revolutionized almost all fields in biology and are changing the practice of medicine. With the falling equipment and sequencing costs, they are becoming indispensable techniques in research and diagnostic laboratories. As a joint state-of-the-art research and training facility of the ETH Zurich and the University of Zurich, the NGS team at the Functional Genomics Center Zurich (FGCZ) offers a five-day course with hands-on practicals.
The lectures cover NGS technologies, their applications and data analysis principles. The practicals consists of sequencing library preparation from gDNA, sequencing run set up on bench top sequencer, and sequencing data analysis. Additionally, single molecule sequencing is covered during this course, including a practical session.

Module MAT 820 Practical training in numerics
07SMMAT820 / Seminar

Description:

General description:
The numerical practical can formally consist of a seminar and a seminar paper or just a seminar paper.

In terms of content, the aim is to apply a learned numerical method to a specific problem and to carry out numerical experiments in order to analyze its behavior (convergence, robustness, applicability, efficiency) and compare it with the theory.
A numerical practical can form the basis for a subsequent master's thesis and is typically linked to current research directions of the Numerical Research Group at I-Math in close collaboration with the members of the working group.

ECTS: 3

Notes:
Interested students can contact the head of the Numerical Methods research group, Professor Stefan Sauter, at any time.

Registration for the Numerical Methods Practicum: The Numerical Methods Practicum is generally offered every semester. The prerequisite is successful completion of the MAT801 Numerical Methods 1 module.
The Numerical Methods Practicum counts as a seminar in the degree program.

If you are interested, please send an email to Prof. Dr. Stefan Sauter by February 9, 2026, for spring semester 26, providing information about which lectures you have already attended in the field of numerical analysis and where you are in your studies. The topic will then be assigned in a joint discussion.

Module PHY 361 Physics against cancer: The physics of imaging and treating cancer
07SMPHY361 / Course

Description:

General description:
Radiotherapy is a rapidly developing and technology driven medical discipline that is heavily dependent on physics and engineering. In this lecture series, we will review and describe some of the current developments in radiotherapy, particularly from the physics and technological view point, and will indicate in which direction future research in radiotherapy will lie.
The lecture series will begin with a short introduction to radiotherapy and an overview of the lecture series (lecture 1). Lecture 2 will cover the medical imaging as applied to radiotherapy, without which it would be impossible to identify or accurately calculate the deposition of radiation in the patient. This will be followed by a detailed description of the treatment planning process, whereby the distribution of deposited energy within the tumour and patient can be accurately calculated, and the optimal treatment defined (lecture 3). Lecture 4 will follow on with this theme, but concentrating on the more theoretical and mathematical techniques that can be used to evaluate different treatments, using mathematically based biological models for predicting the outcome of treatments. The role of physics modeling, in order to accurately calculate the dose deposited from radiation in the patient, will be examined in lecture 5, together with a review of mathematical tools that can be used to optimize patient treatments. Lecture 6 will investigate a rather different issue, that is the standardization of data sets for radiotherapy and the importance of medical data bases in modern therapy. In lecture 7 we will look in some detail at one of the most advanced radiotherapy delivery techniques, namely Intensity Modulated Radiotherapy (IMRT). In lecture 8, the two topics of imaging and therapy will be somewhat combined, when we will describe the role of imaging in the daily set-up and assessment of patients. Lecture 9 follows up on this theme, in which a major problem of radiotherapy, namely organ motion and changes in patient and tumour geometry during therapy, will be addressed, together with methods for dealing with such problems. Finally, in lectures 10-11, we will describe in some of the multitude of different delivery techniques that are now available, including particle based therapy, rotational (tomo) therapy approaches and robot assisted radiotherapy. In the final lecture, we will provide an overview of the likely avenues of research in the next
5-10 years in radiotherapy. The course will be rounded-off with an opportunity to visit a modern radiotherapy unit, in order to see some of the techniques and delivery methods described in the course in action.

Learning Outcome:
Radiotherapy is a rapidly developing and technology driven medical discipline that is heavily dependent on physics and engineering. In the last few years, a multitude of new techniques, equipment and technology have been introduced, all with the primary aim of more accurately targeting and treating cancerous tissues, leading to a precise, predictable and effective therapy technique. In this lecture series, we will review and describe some of the current developments in radiotherapy, particularly from the physics and technological view point, and will indicate in which direction future research in radiotherapy will lie. Our ultimate aim is to provide the student with a taste for the critical role that physics plays in this rapidly evolving discipline and to show that there is much interesting physics still to be done.

Module STA 408DP Statistical Methods in Epidemiology
07SMSTA408DP / Lecture with Practical Exercises

Description:

General description:
We focus on the statistical analysis of health data which are collected in observational settings such as case-control or cohort studies. The most relevant measures of effect (risk, odds and rate ratios) are introduced, and methods for adjusting for confounders (Mantel-Haenszel and regression approaches) are thoroughly discussed. Specialized methods such as propensity score adjustments and conditional logistic regression are introduced for the analysis of matched data. Advanced topics such as causal inference with graphical models, imputation and measurement error and are also covered.

Module BIO 247 Cellular Response to Genotoxic Stress
07SMBIO247 / Block Course

Description:

General description:
This course presents an overview of the methods to study key aspects of the DNA metabolism - including replication, transcription, repair and immune diversification - and of the mechanisms underlying the dysregulation of these fundamental processes, which can lead to genomic instability and tumorigenesis. The students will discuss and perform experiments showing how human cells react to genotoxic stresses and which are the mechanisms of action of proteins involved in the regulation of genome integrity.
The student will have the possibility of visiting different research laboratories located at UZH (Institute of Molecular Cancer Research, Institute of Veterinary Pharmacology and Toxicology, Institute of Experimental Immunology), being exposed to a stimulating atmosphere and an international scientific environment.

ECTS: 6

Notes:
DIE ANMELDUNG FÜR DIE BLOCKKURSE ERFOLGT UNTER https://www.mybioportal.uzh.ch

Learning Outcome:
By the end of the module, the student should be able to: i) describe various experimental approaches to study the cellular response to DNA damaging agents; ii) apply these techniques to visualize and measure the impact of different genotoxic stresses on human cells.

Key skills

On completion of this module, the student should be able to:

- Investigate the consequences of genotoxic stress on DNA replication and chromosomal integrity
- Perform immunofluorescence staining upon UV irradiation to visualize the recruitment of specific proteins to the site of DNA damage
- Analyse the genome-destabilizing effects of transcription/replication conflicts
- Assess the role of post-translational modifications in the regulation of genome stability

Module BIO 381 Research Internship Immunology
07SMBIO381 / Praktikum

Description:

General description:
Das Forschungspraktikum wird in einzelnen Forschungsgruppen ausgeführt. Arbeitsprogramm und Details der Leistungsprüfung werden mit dem jeweiligen Gruppenleiter individuell vereinbart. Am Schluss verfasst der/die Kandidat/in einen Bericht in Form einer wissenschaftlichen Publikation mit Zusammenfassung, Einleitung, Resultaten, Diskussion sowie Literaturangaben. Der/die Kandidat/in schickt den Bericht innert nützlicher Frist an den direkten Betreuer/in und den/die Modulverantwortlichen.

ECTS: 4

Notes:
Die Forschungspraktika werden in den Forschungsgruppen des Institutes für Experimentelle Immunologie und der medizinischen Fakultät ausgeführt.
Diese Forschungspraktika richten sich, wie in der Wegleitung der Biologie präzisiert, an Studierende im Bachelor-Studiengang und ausdrücklich nicht an Studierende im Master-Studiengang.

Learning Outcome:
Durchführung eines Forschungprojekts im kleinen Rahmen. Der Student/in lernt, eine wissenschaftliche Hypothese anhand einschlägiger Literatur zu formulieren. Er/sie lernt, diese Hypothese mit Hilfe von Experimenten systematisch und sorgfältig zu überprüfen. Dabei wird vom direkten Betreuer/in besonderer Wert auf richtig durchgeführte Messungen gelegt, inklusive Kontrollmessungen mit Background-, Negativ- und Positiv- Kontrollen. Der Student/in lernt, die Hypothese und die gemachten Experimente in einem wissenschaftlichen Bericht zu formulieren und die Daten im Kontext bestehender Literatur zu diskutieren.

Target Groups:
Studierende im Bachelor-Studiengang (vgl. Wegleitung Biologie).

Merkmale:	Target Group: Suitable for English Speakers
Responsible instructor:	Burkhard Becher

Requirements:

Assessment:	Arbeitsprogramme und Details der Leistungsüberprüfung werden mit der Abteilungsleitung individuell vereinbart und müssen im voraus beim Modulverantwortlichen und dem Masterkoordinator gemeldet werden. Die Arbeit wird in der Regel auf Englisch verfasst. Der direkte Betreuer/in der Arbeit macht zuhanden des/der Modulverantwortlichen einen Notenvorschlag, der gegebenenfalls vom Modulverantwortlichen modifiziert werden kann.

Module GEO 362 Advanced Economic Geography
07SMGEO362 / Lecture with Practical Exercises

Description:

General description:
Care Work: (Unter/Un)bezahlte Arbeit in der Pflege und Betreuung
Inhaltlich befassen wir uns in diesem Semester mit Themen rund um Care- Arbeit und Veränderungsprozesse in diesem Bereich. Ein Fokus auf Care- Arbeit bedeutet traditionelle Verständnisse von Wirtschaft und Arbeit infrage zu stellen. Während wir auf konzeptioneller Ebene alternative Verständnisse von Wirtschaft genauer betrachten sowie den Stellenwert bezahlter und unbezahlter Arbeit erörtern, liegt der empirische Fokus dieses Seminars auf der Untersuchung von Pflege und Betreuung als ein Teil von Care-Arbeit. Wir beschäftigen uns neben grundlegenden Fragen zur Veränderung gesellschaftlicher Vorstellungen und Praktiken von Arbeit, auch mit den konkreten und komplexen Auswirkungen dieser Prozesse:

- Wie artikulieren sich die Unterscheidungen zwischen formeller/informeller, sichtbarer/unsichtbarer oder bezahlter/ unbezahlter Arbeit in konkreten Beispielen?
- Welche Rolle spielt die Digitalisierung im Bereich der Pflege und Betreuung?
- Inwiefern ist eine Perspektive der sozialen Reproduktion hilfreich, um die gesellschaftliche Rolle von z.B. Altenpflege, Pflegeheimen, Krankenhäusern, Kindergärten, Sozialarbeit oder Lehrpersonen zu verstehen?

Diese und ähnliche Fragen werden mittels eines empirischen Forschungsprojekts ergründet. Die Teilnehmenden erhalten die Möglichkeit in Gruppen von 4-5 Studierende einen Forschungsgegenstand nach eigenem Interesse zu wählen und dieses Thema zu vertiefen. Basierend auf einem qualitativen Forschungsdesign wird der Forschungsprozess, inklusive empirischer Datenerhebung und anschliessender Auswertung, von den Studierenden selbst gestaltet. Die Resultate werden in einem Forschungsbericht dargestellt.

ECTS: 5

Notes:
Die Veranstaltungen finden vor Ort statt. Der genaue Ablauf wird zu Beginn der Vorlesungszeit vom Modulverantwortlichen bekanntgegeben.
Bitte beachten Sie, dass die Raumzuteilung siehe Hinweise dem Raum Y25-K-22 entspricht.

Learning Outcome:
- Sie sind befähigt, sich weitgehend selbständig in ein wirtschaftsgeographisches Themenfeld einzuarbeiten und den Forschungsstand angemessen darzustellen.
- Unter Anleitung können sie eine wissenschaftliche Fragestellung formulieren, ein geeignetes Untersuchungsdesign erarbeiten, dieses methodisch sauber umsetzen und die Ergebnisse in einem Projektbericht darstellen.
- Sie sind in der Lage, erfolgreich in einem Team zusammenzuarbeiten, ihre Arbeitsfortschritte einer grösseren Gruppe zu präsentieren sowie die Projektpräsentationen anderer Gruppen zu diskutieren und konstruktive Kritik anzubringen.

Module CHE 102 Fundamentals of Organic Chemistry: Bond with the Molecules of Life!
07SMCHE102 / Lecture with Practical Exercises

Description:

General description:
In this course, we will bond with the molecules of life - organic compounds primarily composed of carbon, hydrogen, nitrogen, and oxygen, along with other elements. Historically, these were substances found in living organisms - we have all heard of penicillin, cholesterol, and beta-carotene, and these are just a few examples. Today, however, we can also design and synthesize organic compounds in the lab, creating new medicines and materials that do not exist in nature.

What will we learn? We will explore the structure and properties of organic compounds and how we can use molecules to create other molecules. We will delve into key concepts like chirality and examine molecules that, like your left and right hand, cannot be superimposed - one of the key structural features relevant in biological systems and modern medicine. We will also learn how to introduce atoms beyond carbon and hydrogen and how to predict which reactions can occur and under what conditions.

We will intertwine chemistry with fun facts and intriguing discoveries - such as identification of beta-carotene, a natural pigment identified by Paul Karrer, a 1937 Chemistry Nobel Laureate who worked at the University of Zurich. Beta-carotene serves as a precursor to retinal, an aldehyde with a long conjugated core that interacts with light and plays a crucial role in vision. And did you know that another red organic pigment became famous as Ferrari red? Sounds exciting? Then join us this spring as we explore the molecules of life together! ?

ECTS: 7

Notes:
The mandatory mid-term exam will take place on April 2nd during the regular exercise session.

A repetition mid-term exam is scheduled for April 16th from 10:00 to 12:00.

The final course grade is based on a total of 100 points, distributed as follows:

- Mid-term exam: 25 points (25% of the final grade)
- Final exam: 75 points (75% of the final grade)

Admission to the final exam requires:

- Successful completion of weekly exercises on OLAT. Each week, 10 questions will be assigned, and by the end of the semester, at least 50% of all questions must be answered correctly.

Learning Outcome:
Fundamentals of organic chemistry:

- Introduction to the structure and reactivity of organic molecules
- Overview of the functional groups, their identification and reactivity
- Basics of bonding models, elementary reaction steps and reaction types, reactive intermediates and products

All material presented in the lecture and in the corresponding chapters of the textbook is content of the exam. The mentioned topics (above and under "course content") are required.

Module GEO 425 Political Ecology: from critique to transformation
07SMGEO425 / Seminar

Description:

General description:
Despite global efforts to stop and reverse climate change, biodiversity loss, and growing social inequality, these processes only seem to be accelerating. The urgency to address these issues has now led to a global call for 'transformative change,' but what exactly does this m and how can we make sure it is different than all the other failed solutions? To tackle these glaring contemporary issues, this course encourages students to dig deep into the structures of power that maintain the status quo and hinder meaningful transformation.
Specifically, the course provides students with critical theoretical insights into socioecological relations, the production of knowledge about these relations, and the power dynamics inherent in governing these. It focuses on key debates and critiques within the wide field of political ecology and on challenges arising from land and natural resource governance, access, and use. With these critiques in mind, the final sessions of the course focus on some of the current approaches to, and critical debates surrounding, societal transformation initiatives.

The course will be run as an intensive seminar: lectures and close reading of canonical texts will be complemented by classroom discussions and smaller exercises. The course will illustrate practical applications of theoretical concepts through case studies and offer students the option to apply course concepts in a service-learning project. The course will also guide students through the process of writing a seminar paper on a selected topic of interest related to course material.

ECTS: 6

Notes:
The Sustainable Development Goals (SDGs (https://sdgs.un.org/goals)) are a collection of 17 global goals interacting with each other, which are designed to be the blueprint to achieve a better and more sustainable future for all. The 2030 Agenda for SDGs is adopted by all United Nations Member States.

These SDGs are covered in this module: 3; 5; 8; 9; 10; 11; 12; 13; 14; 15; 16 & 17

Learning Outcome:
Upon completion of the seminar, students:

- have reflected upon the complex and conflictual relations that govern access to and control over nature and natural resources
- have critically assessed the existing debates on these topics and can apply them to case studies
- have worked on the formulation of a consistent argument in their seminar paper
- have practiced scholarly skills, such as scientific writing, presentations and debating in class.

If you are repeating GEO121 and have already completed exercises, quizzes and excursions, you can repeat these parts, but you do not have to. In this case, please register on Olat (under Leistungen aus früheren Jahren) and state in which semester (Jahr) you already completed the exercises/excursion. Further information about this is given in the introductory lecture.

Module CHE 202 Inorganic Chemistry II: Chemistry of Transition Metals - Structure, Bonding and Chemistry of Transition
07SMCHE202 / Lecture with Practical Exercises

Description:

General description:
The first part of the lecture deals with the composition and electronical structure of transition metal complexes on the basis of the classical crystal field and ligand field theory. The additional involvement of the up to date concept of the molecular orbital theory (MO) shall thereby contribute to a deeper understanding of the bonding situation and reactivity of transition metal complexes.

The second part provides an overall survey of the d-block elements of the subgroups III - XII as well as their chemistry, application and research trends in detail.

In the third part the central role of the d-block elements in the area of metalorganic catalysis is focussed and illustrated with examples of fundamental catalytic processes within chemical industry.

ECTS: 4

Notes:
Execises will be released in a sporadic manner parallelly to the lectures for a self-reliant processing, in order to deepen the knowledge and to prepare for the final examination. The respective solutions will always be provided somewhat time delayed and may also be discussed in common at flexibly arranged (normal lecture) times.

Learning Outcome:
Profound expertise across the properties and the chemistry of transition metals on the basis of the introduced concepts as well as a basic understanding of the importance and the mode of operation of transition metals in modern catalysis.

Module CHE 204 Organic Chemistry II: Navigating the Molecular Matrix
07SMCHE204 / Lecture with Practical Exercises

Description:

General description:
The course "Organic Chemistry: Navigating the Molecular Matrix (CHE 204)" offers an in-depth exploration of organic chemistry, focusing on the intricate details of molecular structure and reactivity. The curriculum delves into stereochemistry and stereoselectivity, particularly in cyclic molecules, and examines the role of saturated heterocycles and stereoelectronics in organic compounds. A significant portion of the course is dedicated to the study of biomolecules, including carbohydrates, lipids, nucleic acids, amino acids, peptides, and proteins, highlighting their structures, functions, and biochemical roles. Additionally, the course covers the chemistry of sulfur, silicon, and phosphorus, and provides a comprehensive understanding of aromatic heterocycles through a two-part series on their reactions and synthesis.
Catalysis principles and a detailed analysis of organic reaction mechanisms, including additions, eliminations, and substitutions, are integral parts of the curriculum. The course also introduces organotransition metal reaction mechanisms and catalysis, enhancing students' understanding of the application of transition metals in organic reactions. This comprehensive program is designed to equip students with a profound understanding of the fundamental principles and applications in organic chemistry.
A detailed, living syllabus will be developed during class and published on OLAT.

ECTS: 4

Notes:
A mid-term exam will take place on March 30th during lecture hours.

The mid-term exam will count 30% towards the final grade, with the final exam 70%. All participants are required to submit 9 out of 12 exercise solutions (handwritten and scanned) via OLAT. Both these exercise solution submissions and carrying out the midterm exam are required for admission to the final exam. Details will be communicated on OLAT to all registered students.

Learning Outcome:
1. Grasp of Stereochemistry and Stereoselectivity: Ability to understand and predict the stereochemical outcomes in organic reactions, particularly in cyclic molecules.
2. Understanding of Saturated Heterocycles: Proficiency in identifying and analyzing the stereoelectronic effects in saturated heterocyclic compounds.
3. Comprehension of Biomolecules: In-depth understanding of carbohydrates, lipids, nucleic acids, amino acids, peptides, and proteins, including their structures, functions, and interactions.
4. Familiarity with Key Elements in Organic Chemistry: Knowledge of the role and reactivity of sulfur, silicon, and phosphorus in organic compounds.
5. Mastery of Aromatic Heterocycles: Skill in synthesizing and manipulating aromatic heterocyclic compounds.
6. Catalysis Concepts: Comprehension of the principles and applications of catalysis in organic chemistry, including transition metal catalysis
7. Organic Reaction Mechanism Skills: Ability to analyze and predict outcomes in a variety of organic reactions including additions, eliminations, and substitutions.
By the end of this course, students will have a thorough understanding of the fundamental concepts and applications in organic chemistry, with a strong emphasis on the molecular structure, reaction mechanisms, and the role of biomolecules in organic processes.

Module CHE 155 Physical Chemistry II for the Life Sciences
07SMCHE155 / Lecture with Practical Exercises

Description:

General description:
The two-hour lecture continues the basic physical-chemical training begun in CHE154 with a special focus on the life sciences. The first chapter “Surfaces” deals primarily with the effects of surface tension, including the Gibbs-Thomson effect and wetting phenomena. This is followed by the topic “Transport phenomena”, which covers the basics of heat transport, mass transport by diffusion and viscosity. The subsequent introduction to quantum mechanics covers the fundamental differences to classical physics, the results of quantum mechanics for selected systems and possible interpretations of quantum mechanics. This introduction to quantum mechanics serves as the basis for the last chapter, “Spectroscopy”. In addition to general spectroscopic principles, fluorescence, infrared, UV-visible and nuclear magnetic resonance spectroscopy are discussed.

The exercises serve to deepen and apply the material covered in the lecture. They include the independent solving of comprehension, knowledge and calculation tasks using weekly exercise sheets. The exercises are discussed in the tutorial.
The lecture and exercises are supplemented by non-graded online exercises on OLAT. These mainly contain comprehension and knowledge questions relating to the lecture.

Module CHE 326 Advanced concepts of Physical Chemistry I
07SMCHE326 / Lecture with Practical Exercises

Description:

General description:
A. Introduction to Fluorescence Spectroscopy Starting with the principle of electronic excitation the Jablonski diagram will be explained. Internal conversion and intersystem crossing are the first events taking place after electronic excitation.
Fluorescence emission will be explained including the differences between fluorescence and phosphorescence. The time scale of these processes will be discussed. Processes as radiationless decay and quenching will be explained including static and dynamic quenching.
Specific variants of fluorescence spectroscopy, e.g. single molecule spectroscopy, Förster resonance energy transfer, 2-photon spectroscopy, confocal spectroscopy, and fluorescence correlation spectroscopy will be discussed. Further, applications in life sciences and sensing, as well as instrumental aspects will be explained.

B. Surface tension
The section "surface tension" starts with the fundamental aspects of the surface tension of liquids. Further, the effect of surface tension at curved interfaces (Laplace pressure, Kelvin equation), capillary forces and tensides (Gibbs adsorption isotherm) are presented and discussed. The wetting of liquids on flat, rough, chemically homogeneous or heterogeneous solid surfaces including the lotus effect completes the topic. Examples from chemistry, biology or daily life complete both sections.

C. Solid surfaces:
Importance of surfaces in chemistry and technology, concept of surface energy, kinetics and thermodynamics of gas adsorption, adsorption isotherms. Structure of surfaces, Influence surface structure on reactivity. Molecular surface dynamics. Electronic structure of adsorbate layers. Nucleation and growth of crystals, thin film growth. Modern methods in surface science: scanning probe microscopy, photoelectron spectroscopies, electron diffraction. Molecular adsorption and self-assembly. Surface chemistry and heterogeneous catalysis and large-scale industrial synthesis.

Module CHE 327 Advanced concepts of Physical Chemistry II
07SMCHE327 / Lecture with Practical Exercises

Description:

General description:
This course provides an introduction to statistical mechanics related to atomistic simulations.
We revisit the laws of thermodynamics and introduce the concepts of ensembles.
Molecular dynamics is introduced as an efficient method to calculate ensemble averages.
Using these concepts and methods we derive working equations for the calculation of macroscopic properties of molecular systems. The numerical description of interaction potentials and forces will be introduced and applied to simple atomic and complex chemical systems. We will use computer codes to calculate properties using sophisticated simulation protocols.

Module BIO 123 Quantitative and Molecular Systems Biology
07SMBIO123 / Lecture with Practical Exercises

Description:

General description:
The students will be introduced to modern state-of-the-art technologies in quantitative and molecular systems biology, and will be taught the inevitable direction in biology to become a more quantitative science in order to face the challenges of future biology research, which will need to comprehend and integrate biological complexity, incorporate the concept of emerging properties and collective behaviour, understand the origins and consequences of biological variability, and be able to model and predict living systems at the molecular, single-cell, and multicellular level.

ECTS: 3

Learning Outcome:
After finishing this course, students must have the following competences. They are able to:

- Name the various -omics methods present in modern biology research, including the key technologies used, and summarize the types of data that can be collected with these methods.
- List various large-scale gene perturbation approaches and describe how genetic interactions can be inferred statistically and experimentally.
- Distinguish between cell-averaged and single-cell approaches, and be able to describe the power and the weakness of these two approaches.
- Describe the concept of synthetic biology. - Draw regulatory network motifs, including variants of feedback and feedforward loops, and describe how simple motifs can produce complex signal outputs.
- Explain the concept of noise in biology, and describe how noise can be buffered.
- List methods to quantitatively image and track single cells within multicellular systems and tissues, and describe how they work.
- Describe how emerging properties, pattern formation and collective behaviour arise in cell populations and multicellular systems.

Module BME 327 Current Approaches in Single Cell Analysis
07SMBME327 / Course

Description:

General description:
Currently single cell analysis approaches revolutionize the way we study and understand biological systems. In all biological and biomedical settings, cell populations and tissues are heterogeneous; this heterogeneity plays a critical role in basic biological processes such as development and organismic function, but is also a major player in disease, e.g. for cancer development, diagnosis and treatment. Currently, single cell analysis techniques are rapidly developing thanks to initiatives such as the "Human Cell Atlas Initiative" and find broad application in the study of diseases.
In this lecture, we will discuss the most important current single cell approaches, the questions they can address and recent developments. We will cover single cell genomics, single cell transcriptomics, single cell proteomics (CyTOF mass cytometry), single cell metabolomics and highly multiplexed single cell imaging. Finally, we will also discuss the latest approaches for the analysis of such generated highly multiplexed single cell data.

ECTS: 2

Notes:
The course is taught in English
All students must book the module via the UZH booking tool

This Module also has a course number at ETHZ: 551-0338-00L

Learning Outcome:
On completion of this module the students should be able to:

- explain the basic principles of single cell analysis techniques
- identify and justify the limitations of the current single cell technologies and suggest reasonable improvements
- know the basic challenges in data analysis imposed by the complex multi parameter data.

Key skills:
On completion of this module the students should be able to:

- summarize and discuss the impact these technologies have on biology and medicine
- design biological and biomedical experiments for which single cell analysis is essential

Module GEO 122 Human Geography II: Societal and natural resources
07SMGEO122 / Course

Description:

General description:
The module consists of a two-hour lecture (GEO122.1) and an accompanying exercises (GEO122.2). The lecture introduces the basics of human geography. The focus is on selected theoretical perspectives, which are contextualized using examples around the topic of "social and natural resources". The accompanying exercises establish links to the two lecture blocks with the help of suitable tasks. Students also have the opportunity to practice key skills for their further studies.

ECTS: 5

Notes:
Groups are assigned at the beginning of the semester on Olat.
Further information on Olat.
The Sustainable Development Goals (SDGs (https://sdgs.un.org/goals)) are a collection of 17 global goals interacting with each other, which are designed to be the blueprint to achieve a better and more sustainable future for all. The 2030 Agenda for SDGs is adopted by all United Nations Member States.
These SDGs are covered in this module: 5; 10; 12; 15

Learning Outcome:
You are familiar with the following social science perspectives and their significance for human geography:

- Postcolonial geography: liberalism, colonialism, imperialism, extractivism
- Political economy: radical geography, critical geography

You are familiar with the following processes and concepts and are able to explain them using selected examples on the overarching topic of "social and natural resources":
- State of nature, liberalism, contract theory
- Postcolonialism, terra nullius, land grabbing, extractivism
- State of exception, resilience
- Nature and economy, land grabbing, economy in the Anthropocene
- Labor relations in fordism and neoliberalism
- Gig economy, gig work, digitalization

Learning objectives of the exercises
- You use the exercises to deepen topics from the lecture, discuss them with each other and ask questions.
- You will develop an understanding of what science is and how academic writing differs from other text forms.
- You will be able to find, cite, read, summarize and critically discuss relevant academic literature.
- You will be able to present and critically engage with a scientific debate, the opinions of authors and the meaning of terms and concepts, both orally and in writing.

Module GEO 123 Geographic Information Science and Remote Sensing II
07SMGEO123 / Lecture with Practical Exercises

Description:

General description:
This module introduces basic terminology, concepts and principles related cartographic depiction and geovisualisation. The purpose and characteristics of the map as a model of visual communication of geographic phenomena and processes, the conversion of spatial information into a cartographic symbolic language, map interpretation, map projections, thematic cartography, and special forms of geovisualisation are covered. The labs complement the associated lectures using ArcGIS Pro and ArcGIS Online. Labs focus on central elements of the creation of maps including for example the visual variables, color schemes, data classification, cartographic generalisation, design and execution of multicolour online maps and map evaluation. Students work individually, in groups, and independently under the guidance of teaching assistants.

ECTS: 5

Notes:
If possible, book the module before the start of the semester. An UZH account is required for the course.

Learning Outcome:
(1) at the end of this course you can explain the relevance of mapping for geography by providing one concrete example from physical or human geography.
(2) at the end of this course you can list and explain fundamental cartographic concepts. You can competently identify them when reading maps or when interpreting and analysing visualised geographic data.
(3) at the end of this course you can critically evaluate map design solutions based on scientific cartographic criteria, and justify your design decisions using these criteria appropriately.
(4) at the end of this course you are capable of independently visualising a geographic phenomenon with available data using state-of- the-art GIS software, in particular of digitally designing and sharing maps.
(5) at the end of this course you are capable to present your final map project in 5 minutes to your peers in the lab group.

Target Groups:
- Bachelor students with a major in Geography
- Students with a minor in Geography 60 ECTS

Languages of Instruction:
Lectures held in English.

Course Materials:	All course materials are provided on OLAT and must be obtained independently.
Merkmale:	Target Group: Open to School Students
Responsible instructor:	Tumasch Reichenbacher

Requirements:

Prior Knowledge:	Basic knowledge of how to use computers and the Internet are desirable.
Assessment:	Bachelor students (MNF): The module consists of two weighted assessment components. - 07UEGEO123.2: Labs and group project must be passed with at least a "sufficient" grade (greater than 4.0) to successfully complete the module. In case

of unsatisfactory performance, the entire module GEO 123 must be repeated.
- 07VLGEO123.1: Written module exam. If the final module grade is insufficient but the lab part is sufficient, only the lecture material of 07VLGEO123.1 must be repeated on the first repetition exam date.
If the repetition exam date is postponed, the entire GEO 123 module must be booked again.
Language of assessment: The written exam is held in English and German.

Grading Scale: 1-6 Quarter Grades Given

Module GEO 242 Human Geography IV
07SMGEO242 / Lecture with Practical Exercises

Description:

General description:
The introductory lecture (GEO242.1) provides the basics for collecting data in Human Geography. It covers questions of ethics and positionality in research and introduces the following methods: observation, qualitative interviews, discourse analysis and quantitative surveys. In the tutorials (GEO242.2), the methods are applied using case studies.
Students develop their own research tools and apply them in the field.

ECTS: 5

Notes:
After booking the module, students register for the tutorials via OLAT:

Module GEO 243 Remote Sensing and Geographic Information Science IV
07SMGEO243 / Lecture with Practical Exercises

Description:

General description:
This module expands the bases of GEO 113 and GEO 123 regarding the knowledge of methods, operations, and applications of Geographic Information Systems (GIS). The lecture portion (GEO243.1) introduces basic methods of spatial analysis and their implementation in GIS, which are tested in practice in the associated exercises portion (GEO243.2).

ECTS: 5

Notes:
The courses generally take place on-site. The exact schedule will be announced by the module coordinator at the beginning of the lecture period.

Learning Outcome:
After attending this module you should know

- which typical spatial analysis operations a GIS has and how they are used;
- how these operations interact with the data models (entities, fields) and data structures (vector, raster) familiar from GEO 113;
- in which typical application areas GIS-supported spatial analysis can be used and how you can benefit from GIS yourself;
- how a given simple application problem can be operationalized in a GIS, i.e. converted into suitable spatial data models, data layers and GIS operations.
Learning objective for the exercises: You will be able to propose a possible process chain of spatial suitability analysis for a given problem, implement it in a GIS and critically evaluate alternative solutions.

Target Groups:
Bachelor students with a major or minor in geography.

Languages of Instruction:
Lectures in English, lab materials in English, and lab language in English and/or German

Course Materials:	Lecture and exercise materials are made available via OLAT.
Merkmale:	Target Group: Suitable for English Speakers
Responsible instructor:	Esra Suel

Requirements:

Prerequisites:	Module GEO 113 and GEO 123.
Prior Knowledge:	Fundamentals of "Remote Sensing and Geographical Information Science I" (taught in GEO 113).
Assessment:	The performance assessment consists of two parts: - A written module exam (duration: 1 hour) in the first week after the end of the semester (2/3 of the module grade). - The successful completion of the exercises of GEO243.2 (1/3 of the module

grade) is required to pass the module.
The exam is held in English

Module GEO 246 Statistics
07SMGEO246 / Lecture with Practical Exercises

Description:

General description:
This module provides the theoretical and practical foundations for conducting quantitative empirical studies in Geography. The lectures (GEO246.1) contain an introduction to statistical methods that are relevant in Geography as a scientific discipline. The emphasis is on the analytical statistics, in particular on statistical testing methods, regression, correlation and multivariate procedures. The theory is linked to hands- on practice in the exercises GEO246.2. Through the exercises, students get acquainted with applications of statistics in both the social and physical geographical sciences.

ECTS: 5

Notes:
The finalized course schedule and course location will be announced in the first mandatory course meeting (for enrolled or not yet enrolled students), led by the coordinator of the module. The lab sections of this course will be done in groups using specialized software, and held in lecture rooms containing the necessary equipment. Presence in the labs is required.

Learning Outcome:
- You can discuss and apply the most important statistical methods as well as exploratory data analysis methods, and their application in Geography.
- You can independently carry out quantitative geographic analyses with statistical software packages. And you are able to answer empirical research questions through the interpretation of these analyses.

Target Groups:
Bachelor students with Geography major

Languages of Instruction:
Lectures in English; Labs in English and German

Course Materials:	Documents are provided on OLAT, and must be obtained by the students independently.
Merkmale:	Target Group: Suitable for English Speakers
Responsible instructor:	Maarten Eppinga

Requirements:

Prior Knowledge:	Modul 07SMMAT183.
Assessment:	Bachelor's degree (Faculty of Science, i.e., "MNF"): The module consists of two examination components. - 07VLGEO246.1: Written exam at the end of the semester must be passed. - 07UEGEO246.2: The exercises (labs) must be graded "sufficient". The course can be repeated once without having to repeat the labs (if you do not pass the exam, but have passed the labs, you can try to pass the Geo246.1 one time without doing the labs again). However, you must check for your own benefit if the

course or lab contents change. If the course is repeated later, the whole course, including the labs, must be repeated.
The language of assessment is English. Questions are also translated in German.

Module Basic Medical Knowledge for Lawyers
02SMWRM_30_I / Course

Description:

General description:
Obwohl sich jeder Mensch tagtäglich und zwangsläufig mit dem Körper befasst, ist das Wissen über die Funktionen des gesunden Körpers sowie dessen Erkrankungen häufig begrenzt. Für die im Bereich Medizin- und Gesundheitsrecht tätigen Juristinnen und Juristen sind medizinische Grundkenntnisse aber beruflich von zentraler Bedeutung, denn viele rechtliche Fragestellungen sind ohne ein entsprechendes Verständnis nur schwer zu erfassen.

Dieses Modul hat zum Ziel, Juristinnen und Juristen an die Medizin und die Denkweise innerhalb der Medizin heranzuführen. Dazu werden den Teilnehmenden grundlegende Fakten und Zusammenhänge der Physiologie (natürliche Lebensvorgänge und Funktionsweisen des Organismus) und Pathologie (krankhafte und abnorme Befunde des menschlichen Körpers) vermittelt. Somit werden die teilnehmenden Doktorierenden und Studiereden befähigt, die juristischen Fragestellungen im Bereich der Medizin fundierter zu verstehen. Damit soll nicht zuletzt auch die Kommunikation und das gegenseitige Verständnis zwischen Medizinern und Juristen gefördert werden.

ECTS: 3

Notes:
Die Einschreibung erfolgt über OLAT (direkter Link). Die Einschreibung ist auf 10 Plätze beschränkt und zwischen Montag 28. Februar 2022 10.00 Uhr und Freitag 11. März 2022 Mitternacht möglich. Bitte beachten Sie die entsprechenden Einschreibelisten für Doktorierende und Masterstudierende. Masterstudierende haben zusätzlich zu ihrer Anmeldung auf OLAT einen ausgefüllten Antrag auf assoziierte Teilnahme (inkl.
Beilagen) per E-Mail an bmel@ius.uzh.ch zu senden. Dieser kann auf der folgenden Seite heruntergeladen werden: Antrag assoziierte Teilnahme. Es handelt sich um das gleiche Vorgehen wie beim Modul "Assoziierte Teilnahme am Modul Rechtsmedizin ohne Masterabschluss", daher wird darauf verwiesen.

Es stehen insgesamt 25 Plätze zur Verfügung, davon 10 für Masterstudierende.

Die Teilnehmenden unterstehen dem Berufsgeheimnis gem. Art. 321 StGB.

Learning Outcome:
- Erwerb von medizinischen Grundkenntnissen
- Verständnis für die Bedeutung der Zusammenarbeit zwischen Medizin und Recht

Target Groups:
- Doktorierende des PhD BmEL
- Fast Track Teilnehmende des PhD BmEL
- Assoziierte Teilnehmende PhD BmEL (fortgeschritten im Masterstudium mit Interesse an medizinrechtlichen Fragestellungen nach spezieller Antragstellung)

Module GEO 880 Computational Movement Analysis – Detecting Patterns and Trends in Environmental Data
07SMGEO880 / Lecture with Practical Exercises

Description:

General description:
In this course the students will get an overview of the key aspects of Computational Movement Analysis - as a typical application of data science in spatio-temporal environmental data. This includes issues around data capture, preprocessing (filtering, aggregating, reshaping data), as well as data quality issues. The students will learn how to conceptualize domain-specific patterns (in this case movement patterns).
They will then study basic methods for structuring movement data as a typical example of environmental data (segmenting, similarity, movement patterns) and for linking movement to its constraining and enabling environmental context. They will then develop and implement data analysis procedures for detecting and visualizing the patterns. The course is designed as a combination of the R statistics and visualization environment with conventional GIS software.

ECTS: 3

Notes:
The course take place at the Institute of Natural Resource Sciences ZHAW Zurich University of Applied Sciences in Wädenswil (ZH):

- Lecture hall GA215
Campus Grüental
Grüentalstrasse 14
Wädenswil

Learning Outcome:
- Students can preprocess, filter, segment, aggregate, reshape, and visualize environmental data (exemplified with trajectory data) with basic R and additional specialized R libraries.
- Students can conceptualize domain-specific patterns in spatio-temporal data (aka movement patterns) and implement their detection using R/ArcGIS.
- Students can search and visualize patterns and trends in environmental and time series data.
- Students can sketch the most important conceptual data models and data structures for movement spaces and respective movement traces.
- Students are familiar with the most important R libraries for movement analysis.
- Students can integrate R with further spatial analysis tools (e.g.
ArcGIS) for fast and efficient prototyping.

Target Groups:
Master's students majoring in geography and environmental sciences; students from other disciplines contact the instructor.

Module MAT 592 Seminar on Galois theory
07SMMAT592 / Seminar

Description:

General description:
Historically Galois theory arose as an attempt to systematically understand why a general polynomial of degree five or greater is not solvable by radicals. In more modern terms, it outlines an elegant connection between the study of field extensions and the study of groups. The aim of the seminar course is to understand this connection.

The seminar course will start with a review of the basics of field theory and present main results of Galois theory with proofs. We will discuss applications of Galois theory to historically significant problems (solvability by radicals, Euclidean construction of regular polynomials, etc.) as well as present some connections with the more modern topics.

ECTS: 3

Notes:
Mathematical field: Algebra

Learning Outcome:
Learning the basics of Galois theory for fields along with examples and applications.

Target Groups:
Bachelor and Master students in Mathematics

Languages of Instruction:
English

Course Materials:	1. J. Rotman, Galois Theory, (Springer, Universitext). 2. J. P. Escofier, Galois Theory (Springer, Graduate Text in Mathematics 204) 3. J. S. Milne, Fields and Galois Theory (Online notes, on http://www.jmilne.org/)
Merkmale:	Target Group: Suitable for English Speakers
Responsible instructor:	Andrew Kresch

Requirements:

Prerequisites:	MAT211 Algebra I
Prior Knowledge:	Knowledge of the material covered in a basic algebra course (e.g. MAT211 Algebra I) will be assumed. For specific applications, some knowledge of algebraic topology (point-set topology, fundamental group) will be helpful.
Assessment:	- Prepare a talk and present it in class. - Hand in a typed (LaTex) version of the talk - Be present throughout the semester and participate actively in discussions

Module Immersion Didactics (English)
06SM090Imm / Module

Description:

General description:
The course's aim is to provide a basis for future CLIL teachers in order to reflect upon and to implement the methodological and pedagogical dimensions of teaching a subject immersively in English. Participants will get an insight into the basics of CLIL, working on theoretical as well as practical materials, to be prepared for the challenge of having to teach a subject in a - presumably - foreign language. Apart from theoretical inputs and practical work, there will be guest speakers as well as opportunities to talk to immersion students. Course participants are expected to be active in class and in groupwork. During the course they will be required to produce their own hands-on materials, written assignments and will have to be willing to reflect critically upon them. In addition to this, participants are expected to do a set number of hospitation and trial lessons.

ECTS: 8

Notes:
Eine Voranmeldung beim Dozenten Michael Bühler, michael.buehler@ife.uzh.ch, ist unabdingbar. Als Nachweis der Sprachkompetenz wird ein Cambridge Proficiency Diploma (CPE) verlangt. InteressentInnen, deren CPE mehrere Jahre zurückliegt, müssen ein aktuell gültiges Sprachkompetenzniveau C2 nachweisen können. Bei Muttersprache Englisch oder gut dokumentiertem, nachweisbarem langen Studien- oder Arbeitsaufenthalt im englischsprachigen Ausland entscheidet die Kursleitung über eine "sur dossier" Zulassung. Der Sprachkompetenznachweis muss der Voranmeldung zwingend beigelegt werden. Zudem wird erwartet, dass die TeilnehmerInnen mindestens die fachdidaktische Ausbildung (FD1), idealerweise bereits FD2, in ihrem Fach absolviert haben und auch entsprechende erste Unterrichtserfahrungen in Form von Übungslektionen, u.U. Praktika, und/oder Stellvertretungen haben sammeln können. Unterrichtserfahrung im immersiven Fachunterricht wird jedoch nicht erwartet oder vorausgesetzt. - Der zweisemestrige Kurs beginnt jeweils im Herbstsemester. - Die Modulbuchung erfolgt über die Administration LLBM. Das zweite Semester kann nur bei erfolgreichem Bestehen des ersten Semesters besucht werden. - Studierende, die Englisch als einziges Unterrichtsfach absolvieren, werden nicht zugelassen.

Module BME 520 Integrated knowledge in Biomedicine
07SMBME520 / Prüfung ohne Lehrveranstaltung

Description:

General description:
This module is designed as a self-study on a research topic defined at the beginning of the Master studies by the supervisor of the Master thesis and the Master coordinator. Through the survey of the current literature on the subject, the student demonstrates a comprehensive understanding of a specialised area of biomedicine. The topic of the module should not overlap with the specific topic of the Master thesis. At the end of the self-study, the examination of the learning outcomes takes the form of a 30-minute oral examination.

Module Coaching for Learning with Pupils in Upper Secondary Schools
06SM222LCo / Module

Description:

General description:
Während des Lernprozesses begegnen Lernende vielfältigen Herausforderungen, aber auch Chancen zur Weiterentwicklung. Um Herausforderungen zu bewältigen und Chancen zu erkennen, sind Jugendliche auf Unterstützung und Begleitung der Lehrpersonen angewiesen. Lehrpersonen können helfen, Situationen zu analysieren, passende Ziele zu formulieren und Ressourcen zur Bewältigung zu identifizieren. Ein zentraler Ansatz in der Lernprozessbegleitung ist das Lerncoaching. Dabei geht es darum, im Gespräch gemeinsam mit den Jugendlichen Lernstrategien zu entwickeln, Lernerfolge sichtbar zu machen oder die Motivation der Lernenden zu stärken. Im Seminar werden grundlegende Bausteine der Lernprozessbegleitung wie Gesprächsführung, Diagnosekompetenz oder Strategiewissen vermittelt. Der Einsatz von bestimmten Materialien und Techniken wird vorgestellt, aktiv an konkreten Situationen ausprobiert und entsprechend reflektiert.

ECTS: 3

Module MAT 939 Seminar Random Walks on Discrete Groups
07SMMAT939 / Seminar

Description:

General description:
A random walk is a process where a path is constructed by taking successive random steps, classically visualized as a "drunk man" wandering on a simple integer grid. This seminar deals with random walks on groups by transposing this basic picture onto more complicated "grids" whose vertices are group elements.
By tracking how a random walker navigates, we study the probabilistic behavior of such processes and connect them with algebraic properties of the corresponding groups.

Module BIO 431 Cell Death, Inflammation and Immunity
07SMBIO431 / Block Course

Description:

General description:
Immune cells are critical modulators of cell death, inflammation and immunity. Programmed cell death pathways and inflammation play an important role in normal development and in different diseases. Viruses and other pathogens may hijack cellular pathways to cause inflammatory responses and modulate cell death in their hosts, and cancer cells have developed means to inhibit death programs for therapeutic escape.
This course deals with up to date experimental assays to study aspects of cell death, inflammation and immunity, and their regulation in normal development and different disease states.
Abstracts of the projects are handed out to the students prior to the start of the course. After a short introduction, participants are offered to be part of ongoing research projects in the participating groups. The students will gain insight into different techniques such as dealing with mouse models, cellular cell death assays, flow cytometry and imaging technologies, and molecular biology applications. Students will be paired, but each student will perform their own experiments producing an independent set of results. The first presentation is an aim and methodology presentation while the final presentation focuses on the data obtained, reproducibility of the data, troubleshooting and outlook. A short written report by each student is a final requirement.

ECTS: 6

Course to be taken before starting the master

Learning Outcome:
In this course, students are expected to get an understanding of the fundamental cell death programs and how it may pertain to inflammation or immunity, including the relevant experimental approaches. They should be able to identify the relevant literature of their project, to correctly design experiments and to discuss results in the specific context.

Module BIO 413 Genome modification in mammals
07SMBIO413 / Block Course

Description:

General description:
The course focuses on genome modification in cells and organisms, a vital tool in biological research. It will primarily explore theoretical approaches to creating gene-modified animals, covering topics such as random transgenesis and targeted insertions using homologous recombination. These include methods ranging from ES cells and gene targeting to designer nucleases and homology-directed repair in oocytes. A significant component of the course involves planning an actual transgenic research program by writing a grant proposal in the SNF format, which will be the most time-intensive part. Additionally, you will conduct an interest/harm-benefit analysis to determine the project's feasibility.
This course not only provides essential skills for any academic position but also offers valuable experience in planning and writing, making it highly beneficial for preparing bachelor's or master's theses. Module LTK M3 is integrated into this course.

ECTS: 6

Notes:
REGISTRATION FOR BLOCKCOURSES HERE

Learning Outcome:
By the end of the module you should be able to

- understand the exact nature of specific genome modifications in the literature and disucss their consequences and usefulness
- to plan any type of genome modification in silico, including the generation of the required vectors
- understand how to perform genome modifications in cell lines
- practically perform genome modifications in mammals (together with a specialized reproductive techniques laboratory)
- draft, conceptualize, write, present and discuss own scientific strategies to create a requested genomic modification (scientific planning and writing)

Module ECO 331 General Linear and Linear Mixed Models in R
07SMECO331 / Block Course

Description:

General description:
In this course, the participants will learn to analyse experimental and observational data with general linear and linear mixed models. The course will be held as workshop, with lecture-type parts introducing important concepts and exercises in which the participants will work on data sets provided or their own data. A key goal will be that the participants learn to recognize the essential structure of data sets and to implemented them adequately in statistical models with fixed and random effects. Specifically, the course will deal with issues of experimental design, analysis of variance, hypothesis testing, variance components, models with multiple error terms as well as balanced and unbalanced data.
(Note: it is important to understand that this course is not about generalized linear mixed models [GLMM, non-normal data], although it is possible to deal with such data in the projects) .

Day 1: Introduction
Day 2: Important concepts
Day 3: presentation of projects by participants
Day 4: assisted work on own data
Day 5: assisted work on own data
Day 6: Presentation of results

ECTS: 2

Notes:
Please provide a short statement
about where you are in your studies, about the data you will use during the course and what basic stats courses you have attended. Some knowledge and experience with ANOVA and regression, F-Tests, Sums of Squares, degrees of freedoms is needed as this is an advanced course.
.
For registration please mail phdecology@ieu.uzh.ch, include your PhD program and your student number.
Bookings until 28 February 2026, cancellations 02 February 2026.

Course Materials:	Laptop, R software (http://www.r-project.org) including the libraries nlme, lme4, and lmerTest . Course notes will be provided on OLAT
Merkmale:	Target Group: Suitable for English Speakers
Responsible instructor:	Debra Zuppinger-Dingley

Requirements:

Prerequisites:	Important: This course is organized for PhD students of the Life Science Zurich Graduate School. Priority will be given to students registered in the PhD Program in Ecology, however other PhD students can attend if there are available places. Participating Master students will not be awarded ECTS credits unless agreed with the lecturer and the program coordinator prior to the course.
Prior Knowledge:	This is an advanced course that covers complex topics in a limited time. It therefore is essential that the participants have a good understanding of basic linear models (as modelled in R using e.g. lm and aov), and that they are experienced applying these models to their own datasets outside of a course

setting. The course participants must bring their own laptop with a working recent installation of the R software (http://www.r-project.org) including the libraries nlme, lme4, and lmerTest.

Assessment:	Active participation throughout the course. Full attendance

Module Short Course Writing (in) Economics (S)
03SMDOEC0724 / Doktorandenseminar

Description:

General description:
This short five-session writing course will help participants communicate more effectively in their academic writing. The first sessions will look at how to write reader-friendly sentences and create flow and cohesion in a text. Then, the course will focus on structuring different parts of academic texts, including introductions, abstracts, results/ discussions, and conclusions, also reviewing related grammar and vocabulary topics. The topic of AI in academic writing will also be discussed. Students will be able to evaluate and discuss which AI tools are most effective for the writing process and how it has affected the academic writing process in general.
Participants will turn in their work in progress for the course, receiving feedback on it from both peers and the instructor. They should have academic writing to work on in the course, which could include proposals or shorter reports in addition to research articles or dissertation chapters.

Module Foundations of the Economics of Education: Educational Production (S)
03SMDOEC0718 / Doktorandenseminar

Description:

General description:
The human capital of the population is a key determinant of labor-market success and economic growth. This brings the economics of education to the core of understanding individual and societal economic prosperity.
This course will analyze the microeconomic foundations of the economics of education. We will study the efficiency and equity of educational production.
The focus will be on the school system, but the broader lifecycle of education policy will also be covered. While studying recent applied research on education policy, we will also cover up-to-date econometric methods for the empirical identification of causal effects in the economics of education.

Module INI 435 Neural Systems
07SMINI435 / Lecture with Practical Exercises

Description:

General description:
Neural Systems 2026 links biophysical neuron models to computation and behavior. It covers action potentials and dynamical systems, population and neural-mass models, memory and associative networks, birdsong and language learning, predictive coding, Bayesian inference and information theory, dimensionality reduction, intrinsic motivation, and neuroeconomic decision making.

The course develops a multi-scale view of neural systems from membrane biophysics to cognition and decision making. It begins with ionic concentration gradients, Nernst potentials, and the membrane equivalent circuit, leading to conductance-based Hodgkin–Huxley dynamics and numerical simulation (Euler, Runge–Kutta). Reduced neuron models are derived and analyzed using dynamical-systems tools: phase portraits, fixed points, stability, basins of attraction, bistability, and bifurcations. Two-dimensional reductions introduce nullclines, limit cycles, and transitions to periodic spiking through saddle-node, SNIC, and Hopf bifurcations, explaining type I/type II excitability, integrator vs resonator behavior, resonance, rebound and inhibition-induced spiking, depolarization block, and the impact of noise near criticality. The course then bridges to population descriptions via density and mean-field ideas, neural mass models, and Wilson–Cowan excitatory–inhibitory circuits, including hysteresis and oscillations, and motivates large-scale brain simulations. Computational themes include synaptic potentials, firing-rate nonlinearities, integrate-and-fire and rate-based network models, and neural coding with tuning curves. Memory is covered through classic experimental findings (free recall scaling laws, forgetting, recognition capacity, clinical deficits) and computational accounts of associative retrieval and attractor-like network ideas (Hopfield-type networks). A major systems module uses birdsong as a model for speech learning: template formation, the role of auditory feedback and social context, performance-error measurement (including optimal-transport style matching), and the organization of the song system (HVC–RA motor pathway and AFP basal-ganglia loop with LMAN/Area X). Key experiments (population recordings aligned to song, lesions, cooling, stimulation, antidromic identification) motivate circuit functions such as timing sequences, variability injection, and reinforcement-driven plasticity, including dopaminergic performance-error/prediction-error signals from VTA to Area X and closed-loop optogenetic manipulations. Predictive models unify sensory and sensorimotor computation via forward models, corollary discharge, and prediction-error neurons, and extend to predictive coding as redundancy reduction in natural signals (spatial/temporal decorrelation; receptive fields in retina, LGN, and cortex; hierarchical predictive coding). Statistical foundations include Bayesian estimation and decision theory (priors/posteriors, MAP vs ML), causal inference in multisensory perception and vocal adaptation, estimation theory (bias–variance, Cramér–Rao), Fisher information and behavioral optimality, and Shannon entropy/conditional entropy and MDL with links to language modeling and information rates. Later modules connect these principles to modern learning and behavior: dimensionality reduction and representation learning, intrinsic motivation for exploration (softmax, bonuses, counters, E-values), curiosity via forward–inverse models and the noisy-TV problem, playfulness/manipulation drives revealed by sensory substitution, and empowerment as mutual-information-based control. The course concludes with neuroeconomics, relating utility and prospect theory to neural mechanisms and dopamine prediction-error responses.

ECTS: 6

Notes:
The administration is carried out at the ETH. UZH students who want to book the course must register at ETH as special students and book the course at ETH. The link to the registration can be found on the next page.

Learning Outcome:
- Explain ionic equilibrium potentials, membrane equivalent circuits, and conductance-based spiking (Hodgkin–Huxley)

- Simulate neural dynamics with numerical schemes (e.g., Euler and Runge–Kutta) and interpret refractoriness, rebound spiking, and noise effects
- Reduce high-dimensional neuron models to 1D/2D systems and analyze phase portraits, nullclines, fixed points, basins of attraction, and bistability
- Classify neuronal excitability and oscillatory regimes via bifurcations (saddle-node, SNIC, super/subcritical Hopf) and relate them to type I/II neurons, integrators/resonators, and threshold manifolds
- Connect single-neuron dynamics to population descriptions (Fokker–Planck intuition, mean-field and neural mass models) and analyze Wilson–Cowan excitatory–inhibitory circuits, hysteresis, and limit cycles
- Describe synaptic potentials, rate nonlinearities, integrate-and-fire models, and rate-based network equations
- Interpret classic behavioral memory phenomena (free recall, forgetting curves, recognition capacity, amnesia) and relate them to computational accounts
- Understand associative memory and attractor-network ideas (Hopfield-type networks) and their link to retrieval dynamics and scaling laws
- Explain birdsong development as sensorimotor learning: templates, auditory feedback, social context, and separation of phonology and syntax learning
- Describe song-system circuitry (HVC, RA, LMAN, Area X, VTA) and experimental methods (aligned population recordings, lesions, cooling, stimulation, antidromic identification)
- Formulate forward models, corollary discharge, and prediction-error signaling in sensory cortex; relate these to predictive coding principles
- Apply Bayesian estimation concepts (priors/posteriors, Bayes' rule, decision theory, MAP vs ML) and causal inference in multisensory and sensorimotor settings
- Use estimation theory tools (bias–variance trade-off, Cramér–Rao bound, Fisher information) to assess limits of neural and behavioral estimation
- Apply Shannon entropy, conditional entropy, and MDL/model selection to neural coding and to information in language and vocal sequences
- Understand predictive coding as redundancy reduction (spatial/temporal decorrelation; receptive fields in retina/LGN/cortex; hierarchical predictive coding)
- Compare intrinsic-motivation mechanisms for exploration (softmax, exploration bonuses, counters, E-values) and curiosity via forward–inverse models; diagnose the "noisy TV" failure mode
- Distinguish curiosity from playfulness/manipulation drives; interpret sensory substitution and empowerment as mutual-information-based control
- Relate economic choice behavior to utility theory, marginal utility, dopamine prediction errors, and cumulative prospect theory

Learning Outcome:
Die Teilnehmenden erwerben Wissen über die Zusammenhänge der Landschafts- bzw. Bodengenese und Nutzung des Bodens. Ein spezieller Fokus gilt Nassböden, deren Nutzung, Sanierung und damit verbundenen Problemen. Sie werden in der Lage sein natürlich gewachsene Böden von künstlichen zu unterscheiden, diese zu beschreiben und zu interpretieren. In Gruppen werden Profile vorbereitet, die Profilaufnahme geübt und dazu ein Kurzbericht verfasst (Leistungsnachweis).

Module CHE 438 Radiochemistry
07SMCHE438 / Lecture with Practical Exercises

Description:

General description:
Nuclear chemistry and radioactive properties: Sources and decay properties of radioactive elements, radioactive emission properties and the interaction with matter; radiation protection and dose calculations.

Radiochemistry: Chemical synthesis and multistep reactions using 'hot atoms': [18F]- Fluoride chemistry and radioactive halogens, Organic synthesis with 11C (including 13N, 15O), 99mTc radiochemistry and chemistry of other radiometals (64Cu, 68Ga, 89Zr, 90Y, 111In, 225Ac) - emphasis on coordination chemistry

Radioactive compounds in chemical biology: Focusing on i) in vitro assays (chemical and cellular) for evaluating radiotracers, and ii) use of radioactivity as a tool in chemical biology (radioimmunoassays etc).

Applied radiochemistry: Focus on the use of radiochemistry and radioactive materials in different sectors: medicine (imaging/therapy), nuclear energy (waste reprocessing) and the environment.

The course will involve lectures, mentored workshops, homework, presentation/exam. Practical sessions will include handling radioactivity, performing separation chemistry, radiolabelling of small molecules/proteins, radioTLC/HPLC, gamma spectroscopy and nuclear imaging with PET.

ECTS: 5

Learning Outcome:
The primary objective is to learn basic chemical and physical properties of radioactive materials and their applications in chemistry, biology and medicine. Emphasis will be placed on syntheses of radiolabelled compounds for application in biology and medicine.

Module CHE 104 Environmental Chemistry: Introduction and Fundamentals
07SMCHE104 / Lecture with Practical Exercises

Description:

General description:
This module gives an introduction to the topic of environmental chemistry, with a focus on the environmental fate and impact of organic and inorganic contaminants.

Topics discussed include:

- How can chemical substances become environmental contaminants?
- Environmentally relevant classes of contaminants
- Main properties of different environmental compartments
- Distribution of organic contaminants between different environmental compartments
- Persistence and degradation of organic contaminants in the environment
- Atmospheric contaminants and atmospheric transformation processes
- Greenhouse gases
- Environmental nitrogen and carbon cycles
- Heavy metals as environmental contaminants
- Chemical regulation and management

Exercises are handed out four times during the semester. They will be worked on by the students and discussed during following lessons.

Module BME 300 Research Internship in Biomedicine (6-12 weeks)
07SMBME300 / Praktikum

Description:

General description:
The students work on a defined research project under the supervision of an advanced researcher. After the project is finished the students write their project report. Students learn the scientific practice, the use of research methods and how to evaluate, interpret and describe scientific results (report).

Research internships are primarily supervised by research group leaders associated with the Faculty of Science (MNF) or lecture in the Biomedicine or Biology study programs. The research group must be approved by the Studienkoordination Biomedizin biomedizin@physiol.uzh.ch before the start of the internship.

ECTS: 6

Target Groups:
Only for Bachelor Students

Merkmale:	Target Group: Suitable for English Speakers
Responsible instructor:	Lubor Borsig

Requirements:

Assessment:	Within three months after completion of the internship, a research report in English of 10 - 15 pages must be written. The report is graded. If the grade is satisfactory, 6 - 12 ECTS credits will be credited in the advanced studies (core elective area 2), depending on the duration of the internship.

Module Behavioral Lab Meeting (S)
03SMDOEC0764 / Doktorandenseminar

Description:

General description:
Research projects go through many stages. They begin with evaluating the importance of a specific research question; they then need a suitable research design that answers the question. Data then needs to be collected, analyzed, and interpreted. Finally, a coherent story based on the findings must be developed that shows what was learned and where there are weaknesses. This seminar gives graduate students, post-docs, and professors the opportunityto present their research projects - regardless of the stage they are in - and to receive feedback from an interested audience of peers and experts.
Please note that no credit points can be earned for attending this course.

ECTS: 0

Notes:
Attendance in the course is limited. Please send a short email outlining your motivation for attending the course to sally.gschwend@econ.uzh.ch.
The course instructors will inform you if you may attend.
Venue: BLU-003

Learning Outcome:
After attending the course, the student will have a clear understanding of the thought processes involved in all stages of a research project, and will be in a position to plan and conduct a research study on his/her own.

Target Groups:
Graduate students, post-doctoral researchers, and professors

Languages of Instruction:
English

Course Materials:	Any teaching materials will be made available to students.
Merkmale:	Target Group: Suitable for English Speakers
Responsible instructor:	Ernst Fehr

Requirements:

Prerequisites:	Completed MA in economics, enrollment in either the Zurich Graduate School of Economics or the Marlene Porsche Graduate School of Neuroeconomics.

Module BIO 394 Interdisciplinary Research Methods In Computational Biology
07SMBIO394 / Lecture with Practical Exercises

Description:

General description:
The lecture will introduce different techniques, traditionally used in computational biology, such as random walks and stochastic processes, agent-based dynamics, topological invariants, differential and analytical geometry for modeling biopolymers, simulated annealing, Metropolis Monte-Carlo, Markov chains, network topology, machine learning, evolutionary algorithms, information theory and signal analysis. In addition to the lecture series students will learn how to implement some of these algorithms and other useful techniques using object-oriented programming in Python.

ECTS: 4

Learning Outcome:
By the end of the module, the student should be able to

- describe most of the fundamental techniques used in computational biology
- explain the mathematical tools required by these techniques
- write specific algorithms usually present in computational biology
- translate a biological problem into a computational model

Key skills

- solve simple biological problems using computer simulations
- manage small computational biology projects by identifying a question, designing and implementing a strategy and reporting the results in a written and oral form
