Description:

General description:
Microscopy is becoming an essential key method for qualitative and quantitative analysis of biological samples. 3 dimensional microscopy data more and more contributes to accurate models in Life Science. But research involving microscopy requires an exhaustive training of the scientist. Basic knowledge as well as the proper handling of advance instruments are needed to achieve relevant and artefact-free results.
Training scientist at the microscopes is a crucial part of this process.
We propose to qualify PhD students with an already good understanding of microscopy to teach scientist at advanced microscopes of the Center for Microscopy and Image Analysis and to assist teaching in microscopy courses.

ECTS: 1

Notes:
PhD students taking this course will attend an introductory course (1 day) and then contribute to teaching microscopy in courses and to new users at the microscopy core facility, which counts towards their teaching hours required by the Faculty of Science.

Train/teach new users at the microscopy core facility to use the microscopes involves:
Explain the basics parts of the microscope.
Explain how to acquire images taking into account the sample, the question to be answered and the limitations and possible artefacts. Test the performance of the scientists and evaluate whether they have learned it.

Participation/teaching in courses involves: Assist teachers in the lectures and teach short topics.
Teach basic concepts and explain the basics parts of the microscopes.
Teach image acquisition and image analysis.
After completion of these teaching activities, the students will write a reflection on their teaching experiences, which will then be credited as an assessment of this module.

Learning Outcome:
1. Teach basic and advanced microscopy concepts
2. Teach to operate light and / or electron microscopes for the acquisition of scientifically relevant data
3. Identify the optimal microscopic method for a given project
4. Provide expert advice to researches regarding the optimal microscopy method
5. To be able to identify artefacts occurring during preparation and imaging of samples

Merkmale:	Target Group: Suitable for English Speakers
Responsible instructor:	José Maria Mateos Melero

Module Making science videos for the web
00UFK_FME / Block Course

Description:

General description:
Short web videos on social media have seen a dramatic rise over the last years. They represent a new and efficient form of science communication, and even scholar journals are increasingly accompanied by short web videos.
In this do-it-yourself workshop you will create yourself a short web video out of your research. You will write your research story and make a storyboard, to then shoot and compose the movie. Low-budget solutions, mobile techniques and useful softwares will be presented.

ECTS: 1

Module CHE 439 Advanced NMR Methods for Identification of Natural Products
07SMCHE439 / Lecture with Practical Exercises

Description:

General description:
NMR spectroscopy is a powerful technique for structural elucidation of organic molecules. This course is aimed at students who are familiar with the utilization of NMR but wish to deepen their understanding of how NMR experiments work and the theory behind them. In this class you will learn how to become a “power user” of this technique, allowing you to independently plan, execute and analyse NMR experiments. The two main topic areas are

- the relationship between spectral features and molecular structure, including dynamics
- analysis of the physical properties underlying spin behaviour and coherence transfer

You should be familiar with the concepts nuclear spin, spin systems, coupling patterns and be able to analyze standard 1D and 2D experiments (HSQC, COSY, TOCSY) for structural elucidation of small organic molecules. In order to understand experiments beyond the simplest pulse-acquire-type, we need to use quantum mechanics and some mathematics. Luckily, the product operator formalism which is appropriate for the description of the vast majority of experiments does not require very heavy theoretical tools. Nevertheless, self-study is important to understand the advanced concepts discussed in this class - there will be assigned reading or exercises (ca 0.5 – 1h time commitment) to do at home after each lecture. Exercises are typically pen-and-paper and will be assessed counting towards 20% of the final grade. You will have to hand in exercises on OLAT or in analogue form prior to the next lecture.

ECTS: 3

Learning Outcome:
After successful completion of this course, you will be able to:

- Explain the physical properties which are the basis of an NMR experiment
- Name the components of an NMR spectrometer and their function
- Describe the steps required to execute an NMR experiment
- Analyze how processing parameters change the appearance of a spectrum
- Explain how molecular structure (atomic identity, stereochemistry and dynamics) relates to measured quantities (chemical shift, J-coupling, linewidth, intensity)
- Decide which experiments are adequate for which purpose
- Name the building blocks of an NMR experiment and their effect
- Describe the contributions to the phenomenon of relaxation (DD, CSA, PRE)
- Analyze basic pulse sequences with the product operator formalism

Module EEE 315 Flowers and Pollinators
07SMEEE315 / Block Course

Description:

General description:
Flowers are extremely diverse and adapted in many ways to interact with pollinators. Pollinators also comprise a diverse group of animals, mostly of the hyper-diverse class of insects. The interaction between plants and pollinators is a textbook example of a mutualism, with both partners profiting from the interaction and of key importance for ecosystem functioning and crop production. In this course we will study flowers and how they interact with other organisms. We will also investigate pollinators such as bees, functional aspects of flower visitation in insects and evolutionary phenomena such as pollinator- driven diversification in plants. In lectures, theoretical concepts will be communicated; for the practical part, we will conduct a field trip to Sardinia, where we will spend one week, studying the local plants and their pollinators as well as community ecology aspects in a mediterranean environment. The field trip will take place in the last week of March (probably March 22-30, 2026). The field trip will be done together with students/professors from the University of Hohenheim, Mainz, and Naples. There will be an online information meeting about the field trip on Monday, January 05, 2026, 17:00h. Please send me a brief e-mail (florian.schiestl@systbot.uzh.ch) if you want to participate in this meeting, and I will send you the link to the ZOOM meeting.

Module BIO 245 Cell Signaling
07SMBIO245 / Block Course

Description:

General description:
Signaling is an integral part of cellular homeostasis and it allows cells to respond and adapt to a changing environment. Cell signaling is rarely a one-way street and cells employ feedback loops and molecular rheostats to tune their responses. Signaling cascades can be initiated both on the outer layer of a cell and on its innermost constituent, the chromatin, and deregulated signaling lies at the heart of many diseases including cancer, infectious diseases and inflammation, metabolic diseases, and neurodegeneration. In this course we introduce the basics of cell signaling, its physiological functions and its pathologic deviations in human disease. Specifically, the course covers signal transduction in the context of cell differentiation, establishment of epigenetic signatures, energy balance and metabolic regulation, pathogenic insults and inflammation, gene regulation and genome integrity maintenance. In the practical part, we apply a variety of contemporary laboratory techniques to qualitatively and quantitatively assess signaling events in cells and study biological outcomes.

ECTS: 6

Notes:
REGISTRATION FOR BLOCKCOURSES HERE

Module GEO 838 Self-organised Seminar
07SMGEO838 / Seminar

Description:

General description:
The Self-organized Seminar will be designed and taught by the participants themselves. It aims at de-hierarchizing teaching and strengthening students' independence and their responsibility for their personal learning process. In a first step, the participants will collectively identify topics in human geography they feel were neglected in their curriculum so far and which they want to get to know or learn more about. Based on this, the students define course objectives and learning goals and develop a syllabus for the seminar. Simultaneously, they negotiate and formulate the rules regarding collaboration and organization among the group. In the following seminar sessions, the students take turns teaching each other on the chosen topics. They may use a variety of didactic formats. Apart from text-, picture- or video- based discussions or group work in the seminar room, they may include sessions outside campus, such as talks with experts or excursions.

ECTS: 3

Notes:
The Sustainable Development Goals (SDGs (https://sdgs.un.org/goals)) are a collection of 17 global goals interacting with each other, which are designed to be the blueprint to achieve a better and more sustainable future for all. The 2030 Agenda for SDGs is adopted by all United Nations Member States.

Learning Outcome:
Upon completion of the seminar, participants:

- can reflect the contents of their so-far completed curriculum and identify topics they want to (further) explore.
- can develop a syllabus for a seminar and negotiate rules for collaboration.
- can formulate learning goals for the areas of knowledge they want to explore.
- know how to prepare didactically sound seminar sessions in which they teach their peers.
- are able to reflect on the learning outcomes of their self-organized seminar.

Module GEO 374 Remote Sensing and Geographic Information Science V (Remote Sensing of Water Systems)
07SMGEO374 / Lecture with Practical Exercises

Description:

General description:
The module introduces remote sensing based strategies to assess water in the Earth system with a particular focus on water quality, water cycling and availability, and water use. Strategies and possible solutions based on remote sensing data analysis to contribute tackling societal problems related to water (e.g. water scarcity) are outlined. The module combines lectures with project work. Lectures provide students with thorough understanding of water related problems and outline recent developments in remote sensing technology and methodology to study water systems.
Project work conveys important skills to design experiments, analyze data, and communicate obtained results via reports and presentations. The content of this module prepares for writing scientific thesis (i.e. Bachelor thesis) and is further consolidated and expanded by master courses in the spring semester (GEO441) and autumn semester (GEO442).

ECTS: 5

Learning Outcome:
After successful completion, students

Module Herz-Pathologie-Präparate Demonstration
04SMMED18001 / Course

Description:

ECTS: 0

Learning Outcome:
Im Rahmen dieser Lehrveranstaltung werden verschiedene Herz-Pathologie- Präparate demonstriert sowie der klinische Kontext erläutert.
Das Ziel dieser Lehrveranstaltung ist es dem Studenten einen vertieften Einblick in die Anatomie und Pathophysiologie verschiedenster Krankheitsformen im wichtigen Bereich der Kardiologie zu geben. Dabei werden die Krankheitsbilder besprochen und mit Hilfe moderner nicht- invasiver Bilder (u.a. Herz-Ultraschall, Herz-MRI und Herz-CT) veranschaulicht. Ergänzend werden die entsprechenden Pathologie- Präparate im Detail gezeigt und die krankheitsspezifischen Veränderungen erklärt.
Es werden aktuelle explantierte Herzen und Autopsie-Herzen aus der Klinik sowie verschiedene Herz-Präparate aus einer grossen Pathologie- Sammlung des UniversitätsSpitals Zürich (welche unter anderem auch anlässlich der Medizinstudium-Prüfungen verwendet wird) gezeigt und besprochen.
Der Unterrichtsform ist als Vorlesung (Kurs) mit der Möglichkeit für eine intensive Interaktion gedacht, so dass die Studenten möglichst viel vom Wissen der Kliniker profitieren können.

Learning Outcome:
Veranstaltungsbeschreibung: (Lerninhalte / Lernziele / Unterrichtsformate / Prüfungsform)
Die kardiale Auskultation ist ein wichtiger Baustein der körperlichen Untersuchung und kann nicht genug geübt werden. Nach dem Auskultationskurs am Phantom im 3. Jahr und der zwischenzeitlich erfolgten Erfahrung an Patient:innen soll in diesem Kurs Anhand von 4 Patient:innen mit typischen Auskultationsbefunden die Auskultationssystematik und -technik repetiert und vertieft werden.
Basierend auf den Auskultationsbefunden wird anschliessend mit dem:r Tutor:in eine Differentialdiagnose hergeleitet. Diese wird mittels Echokardiographie (Demonstration von wenigen aber typischen Befunden) anatomisch unterlegt. Damit soll 'Gehörtes' mit 'Gesehenem' gebracht werden. Die Diskussion über therapeutischen Konsequenzen wird kurz gehalten, da explizit nicht Schwerpunkt dieses praktischen Kurses.

Module BIO 258 Cancer, Immunotherapy, and Inflammation Research
07SMBIO258 / Block Course

Description:

General description:
Precision oncology aims to diagnose cancers more precisely and to detect tumor-specific changes. Based on the precise characterization of tumor tissue, precision oncology seeks to provide tailored, highly efficient therapies against cancer with fewer side effects. The course will illustrate the field of pathology and molecular pathology so the students understand how a cancer diagnosis is made and the best treatment option is identified. Genomics-based precision oncology has revolutionized oncology but also has inherent limitations. Functional precision oncology is emerging as a complementary approach that aims to bridge the gap between genotype and phenotype by modelling individual tumours ex vivo, taking into account functional tumor pathology. These patient-derived ex vivo models largely preserve several tumour characteristics that are not captured by genomics approaches and enable the functional dissection of tumour vulnerabilities in a personalized manner.

ECTS: 6

Notes:
DIE ANMELDUNG FÜR DIE BLOCKKURSE ERFOLGT UNTER https://www.mybioportal.uzh.ch

Learning Outcome:
In this course, the students will gain theoretical knowledge and hands-on experience of state-of-the-art methods in precision oncology as well as functional tumor profiling. The experimental section will include various patient derived cell models (3D tumor organoids) and areas of molecular biology and cell biology. The experiments will make use of a variety of techniques such as for example drug screening with cell viability assays, a theoretical background of the CRISPR/CAS9 technology, invasion assays, western blotting depending on the laboratories set up. Also the topic of immunohistochemistry and mouse models will be discussed. The students will gain experience in experimental designs and data analysis as well as data interpretation and presentation.

Module BME 352 Auditory Biomechanics
07SMBME352 / Block Course

Description:

General description:
The human ear has evolved to perceive a wide variety of sounds, where the ratio in amplitude between the quietest and loudest sound can be more than 1:1’000’000. State of the art auditory research combines multi-disciplinary efforts from a wide range of fields such as physics, mechanics, fluid dynamics, biology, chemistry, neurology and others. Within this module you will get a basic background in the bio-mechanics of the hearing process and see some of the current research areas and challenges.
The students will do a practical project work with focus on modelling the mechanics of the inner ear, including hands on experimental work with physical testing and data processing (Learning and use of Matlab programming) to analyse mechanical materials properties. The student will summarize and submit their work in a scientific report.

Module BME 353 Human brain activity and the mind
07SMBME353 / Block Course

Description:

General description:
The ultimate aim of neuroscience is to understand the mind by investigating the brain.
The brain is part of the outside material world and brain activity can be measured non-invasively. In this course, we study the functions of the human brain using two non-invasive methods: near-infrared spectroscopy (fNIRS) and electroencephalography (EEG). fNIRS is based on near-infrared light being able to shine through the skull and identify changes in blood flow that originate from brain activity. EEG measures the electrical activity of the brain. The two methods investigate complementary aspects of brain function. We will learn how these methods work and how to apply them in neuroscientific experiments.
The mind is part of the internal world and it can be perceived by introspection: we can directly observe consciousness, perceptions, thinking and feelings and we will reflect on these and their meaning. It is not trivial to connect the brain and mind levels. In this course we critically observe, discuss and analyze the relation between the mind and the brain. We are looking for students keen on pondering these major questions.

ECTS: 6

Students will practically acquaint themselves with the two methods functional near-infrared spectroscopy and electroencephalography and their advantages and limitations. They will think about the brain / mind problem.

Module MAT 733 Dynamical Systems and Ergodic Theory
07SMMAT733 / Lecture with Practical Exercises

Description:

General description:
Dynamical systems is an exciting and very active field in pure (and applied) mathematics, that involves tools and techniques from many areas such as analysis, geometry and number theory. This introductory course will focus on discrete time dynamical systems, which can be obtained by iterating a function. Even if the rule of evolution is deterministic, the long term behavior of the system is often chaotic. Different branches of dynamical systems, in particular ergodic theory, provide tools to quantify this chaotic behaviour and predict it in average. We will give a strong emphasis on presenting many fundamental examples of dynamical systems. Driven by the examples, we will first introduce some of the phenomena and main concepts which one is interested in studying. We will then formalize these concepts and cover the basic definitions and some fundamental theorems and results in topological dynamics, in symbolic dynamics and in particular in ergodic theory. During the course we will also mention some applications for example to number theory, information theory and Internet search engines. Topics which will be covered include:

-Basic examples of dynamical systems (e.g. rotations and doubling map; baker's map, CAT map and hyperbolic toral automorphisms; the Gauss map and continued fractions);
-Elements of topological dynamics (minimality; topological conjugacy; topological mixing; topological entropy);
-Elements of symbolic dynamics (shifts and subshifts spaces; topological Markov chains and their topological dynamical properties; symbolic coding);
-Introduction to ergodic theory: invariant measures; Poincare' recurrence; ergodicity; mixing; the Birkhoff Ergodic Theorem and applications; Markov measures; the ergodic theorem for Markov chains and applications to Internet Search; measure theoretic entropy;
-Selected topics (time permitting): Shannon-McMillan-Breiman theorem; Lyapunov exponents and multiplicative ergodic theorem; continuous time dynamical systems and some mathematical billiards.

ECTS: 9

Learning Outcome:
By the end of the unit the student: will have developed a good background in the area of dynamical systems; will be familiar with the basic concepts, results, and techniques relevant to the area; will have detailed knowledge of a number of fundamental examples that help clarify and motivate the main concepts in the theory; will understand the proofs of the fundamental theorems in the area; will have mastered the application of dynamical systems techniques for solving a range of standard problems; will have a firm foundation for further study in the area.

Module Educational Technology in Foreign Language Teaching
06SM090MFU / Module

Description:

General description:
Ein interessantes Überschneidungsfeld ergibt sich, wenn digitale Medien im Fremdsprachenunterricht zum Einsatz kommen: Fachdidaktik Englisch, Französisch, Italienisch oder Spanisch trifft auf Mediendidaktik. In diesem Seminar erhalten Sie einen Überblick über das Thema, indem Sie mehr als 100 Ressourcen entdecken und ausprobieren. Einige sind bereits didaktisiert, andere können als Lehr- und Lernressourcen entfremdet werden. Wir werden gemeinsam überlegen, unter welchen Bedingungen mit digitalen Medien effektive Lernszenarien entstehen und welche Lernziele des Sprachunterrichts wir damit besonders gut erreichen können. Oder ergeben sich durch digitale Innovationen sogar neue Lernziele im Fremdsprachenunterricht? Auch dieser Frage gehen wir nach, indem wir das Potenzial von maschinellen Übersetzungstools und Textgeneratoren im Hinblick auf die Entwicklung kommunikativer Kompetenz ausloten. Dabei entwerfen Sie eigene Unterrichtsszenarien - z.B. für eine BYOD-Klasse - und setzen sich auch mit Fragen der Chancengleichheit und der Nachhaltigkeit auseinander.

Module Forschungskolloquium Aufmerksamkeitsdefizit / Hyperaktivitätsstörung (ADHS)
04SMPSY18017 / Seminar

Description:

ECTS: 1

Notes:
Kontakt-Email:
Anna.Buadze@puk.zh.ch

Learning Outcome:
Aufbauend auf die im Mantelstudium vermittelten einführenden Inhalte zum Thema Aufmerksamkeitsdefizit/ Hyeraktivitätsstörung (ADHS) soll dieses monatlich angebotene Seminar, Studenten auf Masterstufe an Forschungsfragen in diesem spezifischen Themenbereich heranführen.
Vermittelt werden sollen somit forschungsmethodische (quantitative, qualitative, mixed-method Ansätze) und forschungspraktische Inhalte (Literaturrecherche, ethische Überlegungen, Organisation und Arbeitsweise von Ethikkomission, HFG). Interessierten Studenten steht dabei sowohl die Mitarbeit an (schon bestehenden) interdisziplinären Forschungsprojekten offen oder die Entwicklung eines eigenen Ansatzes, der dann in Form einer Masterarbeit unter Betreuung der Dozierenden begonnen und abgeschlossen werden kann. Grundsätzlich sollen die Studierenden nach Teilnahme am Seminar über vertiefte Kenntnisse im spezifischen Störungsbereich verfügen, aber auch in der Lage sein, erworbenes forschungsmethodisches und forschungspraktisches Wissen in anderen neurowissenschaftlichen Fächern zur Anwendung zu bringen.
Profitieren können die Teilnehmer dabei von einem interdisziplinären (Neurobiologie, Allgemeinpsychiatrie und Forensische Psychiatrie) und interfakultärem (Uni Zürich, Uni Bern, ETH Zürich) Dozententeam. Am Ende des Seminars wird eine ca. 20 minütige mündliche Prüfung abgenommen.

Module MAT 782 Spin Geometry
07SMMAT782 / Course

Description:

General description:
Spin geometry lies at the crossroad of several subfields of modern mathematics and theoretical physics. It provides a beautiful geometric framework for the study of spinors and Dirac operators and forms the mathematical foundation for supersymmetric field theories.
The first half of this course will cover the basic definitions of spin geometry. With the help of the notions of spin groups and principal fiber bundles, one will see how spinors and Dirac operators can be defined over Riemannian manifolds with certain extra structures – the spin structures. We will discuss the obstructions and generalizations of such structures and derive some elementary formulas for the Dirac operators.
In the second half of this course, we will formulate various versions of the vanishing theorem and Atiyah-Singer index theorem for Dirac operators. In particular, we will cover two proofs of the index theorem: one physical “proof” based on supersymmetric quantum mechanics computations, and one rigorous mathematical proof based on the heat-kernel method. Some applications of these theorems will also be discussed.

Module BIO 392 Bioinformatics of Molecular Sequence Variations
07SMBIO392 / Block Course

Description:

General description:
The analysis and interpretation of variations in molecular sequences - especially of DNA variants - is relevant for the definition of disease associated genes, elucidation of molecular mechanisms in health and disease and development of diagnostic and therapeutic approaches especially in the areas of rare diseases and cancer. Understanding the genome variants of an individual constitutes the basis of what is called "precision medicine". This course will address some of the technical procedures and data resources relevant for the analysis and interpretation of sequence variants, with a focus on genome variations and their relation to individual genetic background and disease association.

ECTS: 6

Notes:
REGISTRATION FOR BLOCKCOURSES HERE

Module STA 433 R programming
07SMSTA433 / Lecture with Practical Exercises

Description:

General description:
The lecture elaborates on programming with the S language in the R system for statistical computing and graphics (www.R-project.org). Students learn about language constructs and start to write functions. More complex tasks are addressed with the help of the S3 system for object oriented programming. Special emphasis will be put on software dissemination using R packages, on documentation infrastructure, and the R environment in general. The module takes place every two weeks, the exact dates are communicated by the module responsible at the start of the semester. Two hours of lectures are complemented with one hour of programming exercises and a bi-weekly homework assignment.

ECTS: 2

Notes:
Module can only be booked by the target group. If you do not belong to the target group and wish to take this module: Write an email to masterbiostat@math.uzh.ch to ask about available capacities including information on the program you are registered for.

Target Groups:

Module Climate change and finance: metrics to assess risks and opportunities (S)
03SMDOEC0828 / Doktorandenseminar

Description:

General description:
Climate change is considered as one of the most important challenge for humanity in the next decades. What are the risks for public and private finance? How can the financial sector contribute to climate change mitigation and adaptation? In the wake of the 2015 Paris Agreement on Climate Change there has been growing attention by financial supervisors and central bankers on the potential implications of climate risk for financial stability. In particular, the Financial Stability Board and the European Commission have set out initiatives to improve the climate risk disclosure, create a taxonomy of green assets and foster the awareness of existing metrics for climate-related financial risk. As a result, practitioners of both public and private financial institutions are increasingly interested in the implications for risk management of both climate-induced physical risk and policy risks associated with the transition to the low carbon economy.

ECTS: 3

Learning Outcome:
This intensive block seminar course draws from the recent developments on science-based climate-related financial metrics and provides the students with (i) an understanding of the main notions, main actors and open issues in climate financial risk, (ii) a first-hand know-how on the computation of metrics of climate financial risk on empirical portfolio data, and (iii) ability to assess their implications for policy and risk management. Evaluation is based on class participation, exercises and homework. Students will work on a short project and prepare a presentation.

Module Bayesian Data Analysis and Models of Behavior (L)
03SMDOEC0829 / Course

Description:

General description:
Making sense of the data acquired via experiments or databases is fundamental in many fields of sciences. However, students and scientists often struggle to understand and analyze the data in their own research. This course is designed for researchers who want to gain practical experience with computational modelsfor data analysis based on Bayesian inference. Coursework involves practical demonstrations with example datasets, homework, and discussion of solutions forproblems that routinely arise during data analysis on models of behavior. The participants will learn and practice how to implement the models, estimate their parameters, and interpret the output. No advanced knowledge of statisticsand probability is required, and from the very start, participants are encouraged to apply data analyses by themselves.
The first objective is to make the participants familiar with the conceptual framework of Bayesian data analysis. The second goal is to introduce the ideas of modern Bayesian data analysis, including techniques such as Markov chain Monte Carlo (MCMC) techniques, alongside the introduction of software that facilitates the creation of any Bayesian inference model. Throughout the course, this will involve practical demonstrations with example datasets, homework, and discussions that should convince the participants of this course that it is possible to make inferences and understand the data acquired from the experiments that they usually acquire in their own research (starting from simple linear regressions all the way up to models with hierarchical structures). After working through this course, the participants should be ableto build their own Bayesian inference models and apply such models to their owndata.

Module BIO 374 Virology: Biology of Virus Infection and Evolution
07SMBIO374 / Block Course

Description:

General description:
This course provides insights into methods and concepts in modern molecular virology, with an experimental focus on antiviral drugs, antigenicity, and evolution of important human pandemic viruses, such as SARS-CoV-2, influenza or HIV-1. Participants will experience state-of- the art molecular virology methods, for example high-throughput- sequencing or assays to determine viral fitness and drug/antibody sensitivity. A key component of the course will be an introduction to scientific discussions surrounding the public health implications of virus evolution for vaccine efficacy and drug-susceptibility during pandemics. The course will also provide training in the preparation of scientific posters.

ECTS: 6

Notes:
Anmeldung unter: https://www.mybioportal.uzh.ch

Learning Outcome:
- Understand the principles of virus adaptation and methods to study these
- Perform assays to monitor viral fitness and drug/antibody sensitivity
- Discuss the public health implications of virus evolution for vaccine efficacy and drug-susceptibility
- Prepare scientific data as written, poster and oral presentations
- Participate in discussions surrounding scientific data and issues

Module ECO 303 Teaching Science at University
07SMECO303 / Lecture with Practical Exercises

Description:

General description:
Your first teaching experience should be effective, enjoyable, and personally beneficial. This course gives you the basic knowledge, tools, and practice to have such an experience. You will learn to make your scientific expertise accessible to your students and build a repertoire of evidence-based strategies for teaching abstract science topics to your students and making them active and successful learners. We will show you how to communicate science to novices as well as advanced students in science.
.
The course blends in-person and online learning which allows you to learn as a cohort of peers while maintaining the flexibility to learn at convenient times. We start with an in-person, half-day course followed by a 5 week online course involving videos and a weekly assignment (average of 3 hours of work per week). We meet in-person again for a half day at the end of the course.

ECTS: 2

Notes:
Online course runs from 5 February 2026 to 20 March 2026 with two in person dates.
For registration please mail phdecology@ieu.uzh.ch, include your PhD program

Learning Outcome:
Based on up-to-date findings from research into teaching and learning science you will be able to:

- implement evidence-based strategies into your own teaching,
- use students everyday-conceptions for the development of courses,
- prepare analogies and models to teach in your field,
- implement problem-based teaching,
- set up for experiments and teach the nature of science.

Module PHY 411 Solid State Theory
07SMPHY411 / Lecture with Practical Exercises

Description:

General description:
The course is addressed to students in experimental and theoretical condensed matter physics and provides a theoretical introduction to a variety of important concepts used in this field. The following subjects will be covered: Symmetries and their handling via group theoretical concepts, electronic structure in crystals, insulators-semiconductors- metals, phonons, interaction effects, (un-)screened Fermi-liquids, linear response theory, collective modes, screening, transport in semiconductors and metals, magnetism, Mott-insulators, quantum-Hall effect.

ECTS: 10

Notes:
This course takes place at ETH.

UZH Students have to book this course at UZH and NOT at ETH.

Learning Outcome:
The course provides a theoretical frame for the understanding of basic pinciples in solid state physics. Such a frame includes the topics of symmetries, band structures, many body interactions, Landau Fermi-liquid theory, and specific topics such as transport, superconductivity, or magnetism. The exercises illustrate the various themes in the lecture and help to develop problem-solving skills. The student understands basic concepts in solid state physics and is able to solve simple problems. No diagrammatic tools will be developed.

Module M3L 621 Data driven Modelling of dynamical systems
07SMM3L621 / Block Course

Description:

General description:
The course introduces basic mathematical tools and software used in modeling and analysis of complex systems. Mathematical models are used to describe and understand the dynamics of real-world systems in essentially all applied sciences, such as physics, biology, chemistry, engineering, economics, social sciences etc. The theory of system dynamics is compact, intuitive and very powerful, and relies fundamentally on numerical integration of coupled ordinary differential equations (ODE). The course will cover concepts like integration methods, feedback, modeling artefacts, mechanistic and descriptive modeling, stochasticity, parameter optimization, Monte Carlo simulations and chaotic systems. In this hands-on course we will model and implement dynamical systems, understand the theoretical background and limitations, and practice understanding and communicating of models. The course assessment is a documented model of a case study conceived by the student.

Module Applied inferential statistics for data scientists (S)
03SMDINF2034 / Doktorandenseminar

Description:

General description:
Repetition of basic statistical concepts; overview of statistical tests; introduction to statistical modeling (general linear models, logit/probit, multinomial, ordinal, mixed-effects, non-parametric); introduction to multivariate statistics (principal components, factor analysis, cluster analysis, multidimensional scaling) and time series; examples of design of experiments, conjoint analysis and statistical surveys; basics of stochastic processes and introduction to Bayes' statistics. The statistical concepts will be explained with practical examples that will be computed with R. The focus is on enabling students to use statistics for problem solving with hands-on exercises, and not on mathematical concepts. Special focus is given to Ph.D. research aspects. The course is taught as a mixture of lectures and "flipped classroom" including self-study, group work, presentations and peer- review.

ECTS: 3

Notes:
The number of participants is limited to 20. Computer Science students will be given preference. For registration please send an e-mail to: sigg@ifi.uzh.ch

Notes:
The course runs for one week in June.
It takes place at the campus of the Paul Scherrer Institute (PSI).
Students are required to register directly at PSI with the link: https://indico.psi.ch/e/event/PSImasterschool

Learning Outcome:
The aim of the course is that the students acquire a basic understanding on the interaction of photons, neutrons and muons with matter. Also we will see how one can use these as tools to solve specific problems. The students will also visit different experiments in the large-scale facilities of PSI (Swiss Light Source, Swiss Spallation Neutron Source and Swiss Muon Source).

Module ESS 246 Land Change Science
07SMESS246 / Lecture with Practical Exercises

Description:

General description:
Land Change Science is the science of natural and anthropogenic change to land systems. It starts with the description of what are ecosystems, biomes and ecoregions, and how they get converted to land systems by human modification. It then examines drives of land use change and rates of change. We then examine how do we observe and model land use change and its impacts on Earth biosphere. Finally, we cover economic perspectives and policy processes for land use regulation and implementation.

ECTS: 3

Learning Outcome:
The student will be able to:

- Explain natural and anthropogenic land cover/land use change
- Understand how to observe and measure land system change, and use this information to model it
- Model land system change impacts on the biosphere
- Understand economical and policy aspects related to land change

Module ESS 367 Remote Sensing of the Atmosphere
07SMESS367 / Lecture with Practical Exercises

Description:

General description:
The module introduces strategies for monitoring atmospheric composition and anthropogenic emissions using remote sensing. It focuses on techniques for monitoring air pollution and greenhouse gases using airborne and satellite instruments. In addition, the module outlines strategies and possible solutions for solving societal problems related to air quality and climate change using remote sensing measurements.

The course has two parts:

- The lectures will provide students with a thorough introduction to remote sensing instruments, retrieval algorithms and emission quantification methods. The lectures will also address the political importance of the topic.
- Programming exercises give students the opportunity to apply the introduced methods to remote sensing measurements. The exercises also help students to practice their programming skills with Python.
The content of this module prepares for writing scientific thesis (i.e.
Bachelor or Master thesis) and is further consolidated and expanded by master courses in the spring semester (GEO441) and autumn semester (GEO442).

ECTS: 3

Notes:
The Sustainable Development Goals (SDGs (https://sdgs.un.org/goals)) are a collection of 17 global goals interacting with each other, which are designed to be the blueprint to achieve a better and more sustainable future for all. The 2030 Agenda for SDGs is adopted by all United Nations Member States.

These SDGs are covered in this module: 3; 11; 12 & 13

Learning Outcome:
After successful completion, students

- can explain how to map air pollutants and greenhouse gases using remote sensing measurements.
- can explain how to quantify anthropogenic emissions using remote sensing measurements.
- have practiced their programming skills using Python.
- can argue how remote sensing can be used to address key societal challenges related to air quality and climate change.

Module Experiments with speech
06SM521-526 / Module

Description:

General description:
The media often reports that speech played backwards contains secret messages. Is that true? What does it sound like? Scientists showed that babies can extract information from the speech signal without even knowing anything about the linguistic system. In backward speech, such abilities may be lost. Other research showed that non-native speakers can be identified in speech even when it is played backwards. Why playing speech backwards? How is this done? In this seminar we will learn how to study speech communication using experimental techniques. Students will run their own experiments in which they will address a variety of questions, for example how we segment a continuous speech stream into words or syllables, how we identify different languages or different speakers or how we communicate in strong background noise. There are many fascinating things to discover about speech communication but most likely not that speech played backwards contains secret messages.

ECTS: 6

Learning Outcome:
The course has the objectives to learn how to (a) design and execute experiments in speech; (b) formulate testable experimental hypotheses based on theoretical knowledge; (c) process and manipulate speech for experiments; (d) analyse quantitative data obtained from experiments; (e) interpret results; (f) compare and discuss the results with related research; (g) write up findings in a stat-of-the-art experimental report.

Module Digital Accessibility
06SM521-012 / Module

Description:

General description:
Blind persons and persons with visual impairment, deaf persons and persons with hearing impairment, persons with cognitive impairment, motor impairment, and persons with speech and language disorders face many barriers in their everyday lives, often related to access to information and communication. This course provides an overview of common barriers and introduces language-based assistive technologies and e-accessibility measures. Specifically, the course deals with guidelines for creating accessible electronic documents (e.g., web pages), with screen readers, Braille, graphical and multidimensional information, mobile accessibility, wayfinding, sign languages, tactile signing, Augmentative and Alternative Communication (AAC), and ethics.
Students will gain hands-on practice using various tools as part of the exercises accompanying the course.
This course is complemented by a course on Master's level with a focus on deep learning approaches.

ECTS: 6

Learning Outcome:
Students (1) are aware of different target groups in the context of accessibility; (2) are aware of barriers that these target groups face in accessing information and communication as well as information and communication technologies; (2) know about tools and measures for reducing some of these barriers; (3) know how to operate a selection of these tools.

Module Text Analytics in the Digital Humanities
06SM521-014 / Module

Description:

General description:
After an introduction to Text Analytics and Digital Humanities, we learn to program key methods ourselves and to use existing tools. The methods comprise concordancing, collocations, machine learning, topic modelling, keyword detection, named entity recognition, network analysis, stylometry, sentiment detection, vilsualisation and transformers (LLMs). They will be demonstated by case studies and hands-on experiments. The aim of the seminar is to enable students to conduct and interpret experiments themselves. Central concepts of statistics, namely overuse, significance, classification, regression, and distributional semantics such as topic models and BERT models are shown by example, using real- world corpora and giving tangible results and quantitative support. Simple data pre-processing steps are demonstrated. The statistical programming language R is used to create wordlists, conduct statistical tests and for simple visualisations and BERT zero-shot. For tasks like topic modelling, document classification and conceptual maps, recipes for using the tools mallet, LightSide, textplot, gephi, and others are given.

ECTS: 6

Learning Outcome:
Participants will (1) know the fundamental questions, problems, challenges and methods in Digital Humanities; (2) be able to apply the methods to their own scientific questions and datasets; (3) acquire an overview of existing resources.

Module Text Mining
06SM521-015 / Module

Description:

General description:
Das Modul führt ins Text-Mining ein, das heisst mit Verfahren, um aus unstrukturierten Textdaten strukturierte Information zu extrahieren.
Es vermittelt dabei die relevanten sprachtechnologischen Ansätze für Sentimentanalyse und Media-Monitoring, zwei wichtige Anwendungsbereiche der Computerlinguistik. Sentimentanalyse,
d.h. die Erkennung von positiven oder negativen Bewertungen in sozialen Medien (insbesondere nutzergenerierte Inhalte wie Kommentare, Blogs, Kurznachrichten), ist zu einem wichtigen Bereich der Informationsextraktion geworden. Sie ist eine Basis-Komponente von Media-Monitoring-Systemen, die sich damit beschäftigen, welche Themen und Entitäten (Personen, Orte, Produkte) prominent sind. Weiter wird im Modul die Rolle von Linked Data als strukturierte Wissensrepräsentation eingeführt sowie ihre Verwendung in Text-Mining-Ansätzen betrachtet. Das Modul beginnt mit den Fragestellungen, Methoden und Problemen. Anschliessend werden ausgewählte aktuelle Forschungsansätze vertiefter behandelt. Relevant sind dabei Themen wie Sprachmodelle, Multilingualität, informelle Sprache, Named-Entity-Erkennung/Linking und Relationserkennung. Die Teilnehmenden implementieren in Übungen einzelne Aspekte.

ECTS: 6

Notes:
Please note: This module will be taught in English only. All lectures, materials, and assessments will be in English.

Learning Outcome:
Die Studierenden kennen die wichtigen Fragestellungen der Erschliessung von strukturierter Information aus natürlichsprachlichen Texten, die damit verbundenen Probleme und die computerlinguistischen Ansätze zu ihrer Lösung. Sie kennen insbesondere die Teilgebiete der Sentimentanalyse und des automatischen Media-Monitoring und haben eine Übersicht, welche sprachtechnologischen Komponenten und Ressourcen benötigt werden. Sie kennen sich mit Linked Data, ihrer Verwendung und Rolle im Text-Mining aus. Sie kennen verschiedene aktuelle Forschungsansätze für die Teilprobleme und gewinnen praktische Erfahrung mit eigener Programmierarbeit.

Module Practical Training Off-Site
06SM521-016 / Module

Description:

General description:
Die Studierenden sammeln Erfahrung in der Praxis. Sie erhalten Einblick in die Abläufe in Betrieben, sind beteiligt an der Umsetzung computerlinguistischer Methoden zur Lösung firmenspezifischer Probleme. Sie wenden das im Studium Gelernte auf kommerzielle Fragestellungen an und passen es an die Anforderungen der Arbeitswelt an. Externe Praktika sind in der Regel Aufenthalte in Firmen oder öffentlichen Organisationen, welche auf dem Gebiet der Sprachtechnologie tätig sind. Die Praktika müssen fachbezogen sein und müssen selber organisiert werden. Dieses Modul kann mit einer Punktzahl von 3 oder 6 gebucht werden. Die Punktanzahl wird in Absprache mit dem Modulverantwortlichen festgelegt.

ECTS: 6

Notes:
Externe Praktika sind für Studierende gedacht, die alle Pflichtmodule bestanden haben. Die Studierenden müssen die Praktikumsorganisation selbstständig suchen. Vor Beginn des Praktikums muss eine E-Mail an die modulverantwortliche Person gesendet werden - mit Angaben zur gewählten Organisation sowie zur eigenen Rolle und den geplanten Aufgaben -, um abzuklären, ob ein Praktikum dort grundsätzlich möglich ist.

Nach Abschluss des Praktikums ist eine E-Mail an die modulverantwortliche Person zu senden mit folgenden Angaben: (1) vollständiger Name, (2) Matrikelnummer, (3) Studienprogramm, (4) Modulnummer 06SM521-016.
Zudem sind zwei PDF-Dokumente anzuhängen: (A) eine offizielle Bestätigung des Unternehmens mit Name der studierenden Person, Zeitspanne des Praktikums und Gesamtarbeitszeit in Stunden (für 3 ECTS mindestens 90h, für 6 ECTS mindestens 180h); (B) ein von der studierenden Person verfasster Bericht über Aufgaben, Ergebnisse und Erkenntnisse im Umfang von 500 bis 1000 Wörtern (ca. 1-2 Seiten).

Das Modul wird danach für das Semester, in dem der Hauptteil der Arbeit stattgefunden hat, durch die modulverantwortliche Person gebucht und als bestanden bewertet. Eine selbstständige Buchung im Buchungstool ist nicht möglich. Das Praktikum kann bereits vor dem offiziellen Semesterbeginn starten.

Learning Outcome:
Die Studierenden (1) erhalten Einblick in die Arbeitswelt (2) arbeiten an der Verbindung von Theorie und Praxis (3) lernen die Abläufe in Firmen kennen (4) wenden Gelerntes an (5) erweitern ihr Wissen um praxisrelevante Fragestellungen

Module Student Teaching Assistant 1
06SM521-019 / Module

Description:

General description:
Ein Tutorat/Übungsleitung dient der Erlernung von ersten didaktischen Fertigkeiten. Dies setzt ein reflektierteres Verständnis fachspezifischer Inhalte voraus und erfordert die Aufbereitung von Lernmaterialen für das Repetieren der Inhalte aus der Vorlesung, sowie das Konzipieren und Korrigieren von Übungsblättern. Dieses Modul kann mit einer Punktzahl von 3 oder 6 gebucht werden. Die Punktanzahl wird in Absprache mit dem Modulverantwortlichen festgelegt.

ECTS: 6

Notes:
Studierende, die eine Lehrveranstaltung erfolgreich absolviert haben und an einer zukünftigen Übungsleitung interessiert sind, sollen frühzeitig selbstständig die Dozierenden kontaktieren. Diese melden die Besetzung des Tutorats an die Programmkoordination (programmkoordination@cl.uzh.ch). Vor jedem Semester wird zusätzlich per E-Mail auf offene Tutoratspositionen hingewiesen, auf die sich Studierende bewerben können.

Nach erfolgreichem Abschluss des Tutorats wird das Modul durch die Programmkoordination entsprechend dem Zeitaufwand mit 3 oder 6 ECTS gebucht und als bestanden bewertet. Eine selbstständige Buchung im Buchungstool ist nicht möglich. Im Laufe einer Studienstufe können max. zwei Module «Übungsleitung/Tutorat» gebucht werden, wobei die beiden Module sichauf unterschiedliche Lehrveranstaltungen beziehen müssen.

Learning Outcome:
Die Studierenden (1) verstehen fachspezifische Inhalte aus einer Lehrperspektive (2) lernen Vorlesungsinhalte zielgruppengerecht aufzubereiten und als Übungsmaterial zu konzipieren (3) lernen zu korrigieren und Rückmeldung zu geben

Languages of Instruction:

Requirements:

Prerequisites:	Im Laufe einer Studienstufe können max. zwei Module «Übungsleitung/Tutorat» gebucht werden, wobei sich die beiden Moduleinhaltlich unterscheiden müssen. Dieses Modul wird gebucht, um sich eine erste Übungsleitung anrechnen zu lassen. Für dieses Modul muss man sich bewerben. Zuvor muss zwingend Rücksprache mit dem Modulverantwortlichen genommen werden (per E-Mail). Die Dozierenden der Lehrveranstaltung müssen in den E- Mail-Verkehr einbezogen sein. Übungsleitungen werden normalerweise einige Wochen vor Semesterbeginn auf der Mailingliste der Computerlinguistik (cl- list@lists.ifi.uzh.ch) ausgeschrieben. Die Studierenden können sich auch gerne jederzeit spontan bei den Dozierenden bewerben, für deren Lehrveranstaltung sie eine Übungsleitung übernehmen möchten. Für Übungsleitungen/Tutorate muss das entsprechende Modul selbst erfolgreich bestanden sein.

Module Focus on Phonetics and Phonology
06SM521-020 / Module

Description:

General description:
Seminars in this module will focus on fundamental principles of English phonetics and phonology, including articulatory phonetics, phonological theory, accent variation, speech synthesis and contrastive phonetics (English and other languages). They introduce key topics on the basis of relevant theoretical and methodological literature and software to analyse speech (spectrograms, formants, pitch, intensity, etc.).

ECTS: 6

Learning Outcome:
Students are able to research the relevant theoretical and methodological background for the study of English Phonetics and Phonology, including data collection, analysis and statistical testing. On the basis of relevant literature, they develop their own research hypotheses and apply the core concepts in the analysis of their data. They learn to discuss and present these aspects in class and subsequently integrate them into their written work.

Module Bachelor's Thesis
06SM521-BA / Bachelor Paper / BA-Arbeit

Description:

General description:
Die Bachelorarbeit ist der Ausweis über die Fähigkeit, eine wissenschaftliche Aufgabenstellung innerhalb der vorgegebenen Frist selbständig zu bearbeiten und adäquat darzustellen. Dazu gehört die Sichtung und Aufarbeitung relevanter Forschungsliteratur, die Entwicklung eines eigenen Lösungsansatzes, die Umsetzung desselben, die Schaffung oder Nutzung von annotierten Daten zur Evaluation der implementierten Lösung und schliessslich die schriftliche Ausarbeitung in Form einer Bachelorarbeit. Neben Arbeiten, die eine eigene Programmierung zur Lösung eines bestimmten Problems beinhalten, sind auch rein theoretische Arbeiten möglich. Diese erfordern mehr Literaturrecherche und ein Analysekonzept, das die Rezeption des bislang Erreichten mit einer Synthese verknüpft, die im Sinne eines Ausblicks mögliche künftige Entwicklungen diskutiert. Bitte konsultieren Sie die Webseite des Instituts für Computerlinguistik für weitere Informationen.

ECTS: 15

Learning Outcome:
Die Studierenden (1) können eine computerlinguistische Fragestellung eigenständig bearbeiten (2) sind in der Lage, die dazu relevante Fachliteratur zu sichten und bezogen auf die Fragestellung zu interpretieren und zu rezipieren (3) können existierende sprachtechnologische Verfahren bei der Bearbeiten der Fragestellung nutzen (4) können, falls nötig, eigene Skripte und Programme schreiben, um Teilaspekte zu bearbeiten (5) sind in der Lage ihren Ansatz bzw. ihr System quantitativ zu evaluieren (6) können ihre Problemlösestrategie in geeigneter Weise in schriftlicher Form und nach den formalen Regeln der Disziplin beschreiben (7) können den zeitlichen Ablauf des Bachelorprojekts planen und es fristgerecht beenden

Module Machine Learning for Natural Language Processing 2
06SM521-506 / Module

Description:

General description:
This course focuses on current neural machine learning (ML) methods that achieve state-of-the-art performance in Natural Language Processing (NLP) tasks. Participants study and present current research articles from the NLP literature. As a practical preparation for a modern empirical master thesis, they learn how to plan, conduct and evaluate ML-based NLP experiments and how to describe their approach and results in a scientific paper.

ECTS: 6

Notes:
This module is structured more like a colloquium than a traditional lecture. It combines input sessions on scientific work, experimentation, and academic writing with student-led presentations. Each participant will select a recent NLP paper, study it in depth, and present it to the class for discussion. As practical work, students will take part in a shared task of their choice, working on a dataset and submitting a short system description paper. Where possible, we will support successful teams in also participating in the conference associated with the shared task. The goal is for successful teams to produce a scientific publication by the end of the module.

Learning Outcome:
Students know the current state of machine learning methods for various NLP tasks. They know how to conduct machine learning-based empirical research in computational linguistics and how to present it in the scientific format of a workshop paper.

Module Instrumental techniques of phonetic research
06SM521-520 / Module

Description:

General description:
Since speech is a transient event, phoneticians regularly resort to the aid of technical devices in order to record, describe and analyse the production, the acoustics and the perception of speech sounds. Hence, in this module we look at the technical side of phonetic research and the students acquire and develop skills and techniques necessary for the successful deployment of such devices, ranging from sound recording equipment (especially recorders and microphones) to more specialized phonetic equipment (such as the laryngograph) to software solutions geared specifically towards the need of phoneticians (such as Praat or the R-package 'vowels').

ECTS: 6

Learning Outcome:
Students know how to make high-quality audio recordings for phonetic research purposes. They can annotate sound files, make reliable measurements in them (formants, pitch, intensity, etc.) and produce meaningful visualizations (wave forms, spectra, spectrograms, etc.) with suitable software. They also understand how to read spectrograms so as to draw informed conclusions about the temporal and spectral characteristics of speech events. Moreover, students understand the most important key notions and concepts in automatizing measurements and in making them replicable (scripting).

Languages of Instruction:
Englisch

Merkmale:	Target Group: Suitable for English Speakers
Responsible instructor:	Volker Dellwo

Requirements:

Prerequisites:	Students are required to have attended an introductory module in phonetics at bachelor or master level.
Assessment:	During the semester students run guided analyses on spoken material both as part of the course but also as personal homework. In addition students are recquired to hand in a small-scale empiric study (7-10 pages) to be handed in a fortnight after the last meeting of the semester. Both their analyses during the semester and their final report form their portfolio and thus the basis for the evaluation of their performance. ---

Module Practical Training In-House
06SM521-510 / Module

Description:

General description:
In this module, the students get in touch with scientific project work, that is, they learn how to do basic research. In order to accomplish these kind of skills, they read scientific literature, prepare and annotate data, apply statistical and machine learning methods to solve particular problems. They are also involved in the preparation of articles for workshops and conferences. The students work on a particular (partial) problem in a scientic context or even running project. This module can be booked to credit work done in a scientific project at the UZH. This module can be booked with 6 or 9 ECTS points. The amount of points will be decided in consultation with the module coordinator.

ECTS: 6

Notes:
Students must independently find a supervisor at the Department of Computational Linguistics.
Students usually contact lecturers of previously completed courses to inquire about possible involvement in a related project. There is no entitlement to an internal internship.

If you are working on a project outside the Department of Computational Linguistics, please send an e-mail to the module coordinator before the internship with details of the chosen organization and your role in order to clarify whether an internship can be credited to our study programme. In the case of projects with supervisors who either work at the Department of Computational Linguistics or teach in the study program, no clarification is required from the module coordinator.

After completing the internship, the supervisor sends an email to the module coordinator with the following details:
(1) full name,
(2) matriculation number,
(3) degree program,
(4) module number
06SM521-510,
(5) student's area of work,
(6) number of ECTS credits awarded (6 or
9).
A workload of
180 hours is required for 6 ECTS,
270 hours for 9 ECTS.

The module will then be registered and marked as passed by the module coordinator for the semester in which the main part of the work took place. Self-enrollment via the booking tool is not possible. The internship may begin before the official semester start.

Learning Outcome:
The students (1) get in touch with research (2) read scientific literature (3) are involved in evaluation processes (4) take over particular tasks in the context of a project (5) are involved in the preparation of articles (6) get insights into practical work (7) deepen their knowledge and skills with respect to a particular topic

Module Practical Training Off-Site
06SM521-511 / Module

Description:

General description:
The students gain experience in the application of computational linguistics. They get in touch with the structures and procedures of companies and are involved into the realisation of software in order to solve particular problems of these companies. The students apply what they have learned and adapt it to the needs of a specific commercial sector. Practical Trainings Off-Site are usually stays at companies or public organizations that are involved with Natural Language Processing. The training has to have a relation to Natural Language Processing and they have to be organized autonomously. This module can be booked with 3 or 6 ECTS points. The amount of points will be decided in consultation with the module coordinator.

ECTS: 6

Notes:
External internships are intended for students who have successfully passed the first semester and have fullfilled all additional requirements. Students must independently find an internship placement. Before starting the internship, they must send an email to the module coordinator - including information about the chosen organization, their role, and planned tasks - to clarify whether an internship at this organization is generally acceptable.

After completing the internship, students must send an email to the module coordinator with the following details:
(1) full name,
(2) matriculation number,
(3) degree program,
(4) module number
06SM521-511.

Two PDF documents must be attached:
(A) an official confirmation from the organization including the student's name, internship period, and total working hours (minimum of
90 hours for 3 ECTS,
180 hours for 6 ECTS);
(B) a report written by the student (500-1000 words, approx.
1-2 pages) describing tasks, results, and learnings.

The module will then be registered and marked as passed by the module coordinator for the semester in which the main part of the work took place.
Self-enrollment via the booking tool is not possible. The internship may begin before the official semester start.

Learning Outcome:
The students (1) get in touch with language technology companies (2) learn to connect theory and practical work (3) get to know the structures and processes of companies (4) apply what they have learned (5) broaden their knowledge of practical issues

Module Programming Project
06SM521-512 / Module

Description:

General description:
Programming projects aim at the consolidation of programming and the acquisition of software engineering skills. Starting with a particular research question and relevant literature, they work on a solution, define milesstones, aquire and/or annotate data, implent a programm and evaluate it using appropriate data. This module can be booked to credit work done in a programming project. This module can be booked with
3, 6 or 9 ECTS points. The amount of points will be decided in consultation with the module coordinator.

ECTS: 6

Notes:
Students must independently find a supervisor at the Department of Computational Linguistics. They may propose their own topic or work independently on a predefined one. For programming projects carried out outside the department, an email must be sent to the module coordinator before the project starts, including the supervisor's details (full name, position, email) and the project topic, to clarify whether the project can be credited.

After successful completion of the programming project, the supervisor sends an email to programmkoordination@cl.uzh.ch with the following information:
(1) full name,
(2) matriculation number,
(3) degree program,
(4) module number
06SM521-512,
(5) project title,
(6) number of ECTS credits earned (3,
6, or
9),
(7) confirmation that the corresponding workload (90h,
180h, or
270h) has been fulfilled.

The module will then be registered and marked as passed by the program coordination for the semester in which the main part of the work took place. Self-enrollment via the booking tool is not possible. The project may begin before the official semester start. A maximum of two programming projects can be registered within an academic level.

Learning Outcome:
The students (1) autonomously design a project (2) realize the project plan (3) use existing tools (4) do software engineering (5) document their work according to standards (6) evaluate the results (7) use software repositories

Module Student Teaching Assistent
06SM521-513 / Module

Description:

General description:
A student teaching assistance serves the acquisition of basic teaching skills. This requires a deeper insight of the contents of the associated lecture and the ability to prepare teaching material in order to help the students to better understand it. The task also involves the preparation and correction of exercises. This module can be booked to credit the conducting of exercises/tutorials. This module can be booked with 3 or 6 ECTS points. The amount of points will be decided in consultation with the module coordinator.

ECTS: 6

Notes:
Students who have successfully completed a course and are interested in a future tutorial/teaching assistantship should proactively contact the course instructor. The instructor reports the assignment to the program coordination (programmkoordination@cl.uzh.ch). Before each semester, an email will also be sent with open tutorial positions, to which students may apply.

After successful completion of the tutorial, the module will be registered and marked as passed by the program coordination with 3 or 6 ECTS depending on the workload.
Self-enrollment via the booking tool is not possible. A maximum of two "Student Teaching Assistant" modules can be registered per academic level, and they must relate to different courses.

Learning Outcome:
The students (1) cope with computational linguistics content from a teaching perspective (2) learn to prepare computational linguistics content in a way tailored to a student's audience (3) learn to correct exercises and give appropriate feedback

Languages of Instruction:
Deutsch und/oder Englisch

Merkmale:	Target Group: Suitable for English Speakers
Responsible instructor:	Simon Clematide

Requirements:

Prerequisites:	In the duration of a study level a maximum of two modules «Student Teaching Assistant» can be booked, whereby the two modules must differ in content (also to any previously completed student teaching assistant modules). This module is booked in order to receive credit for a first job as a student teaching assistant at master's level. This module is an application module, the application has to be authorized by the module coordinator (per Email). The lecturers have to be included in the communication. The open positions for student teaching assistants are usually posted on the mailing list of the Institute of Computational Linguistics (cllist@lists.ifi.uzh.ch) a few weeks before the semester starts. Students interested in conducting exercises/tutorials of a specific course can apply anytime for the position directly with the lecturer and the module coordinator. The module in question must have been passed successfully beforehand.

Module English Literature: Textual Analysis
06SM440-020 / Module

Description:

General description:
The "English Literature: Textual Analysis" module is a two-semester module that consists of weekly seminar sessions and an accompanying fortnightly lecture. Designed as an introduction, the module familiarises students with the critical vocabulary and methodology used in the study of literature. The emphasis is on the structural analysis and close reading of poetry, narrative texts, drama, film and other visual examples so that students learn how to approach various genres and different media. The module also trains students in the conventions of academic research and writing practised in literary studies. The lecture offers an overview of the most important theoretical concepts and illustrates these by means of concrete literary examples. The seminars, which are taught in smaller classes, provide an opportunity for in-depth discussions, exercises and group work.

ECTS: 9

Learning Outcome:
Students are able to: (a) closely read primary and secondary texts; (b) define the most important literary terminology; (c) apply these terms in their analysis of literary texts; (d) reflect on various literary genres and forms as well as different media; (e) evaluate and interpret their findings, develop thesis statements, structure arguments and support these with textual evidence; (f) search for relevant material in library catalogues and the most important databases used in the subject.

Module Literature in Context: History and Theory
06SM440-200 / Module

Description:

General description:
This two-semester module consists of a weekly lecture in the first semester and a self-study component in the second semester. In order to provide students with a historical survey, the module traces the forms and evolution of poetry, fiction, drama and non-fictional prose from the Renaissance to the present. The lecture introduces the individual periods in literary history and analyses selected literary examples in their respective historical, cultural and artistic contexts. Enlarging upon the material discussed in the lecture in the first semester, students spend the second semester reading a selection of texts they chose from the reading list in addition to a number of set texts from the lecture and an introduction to literary theory. The module concludes with a final oral exam at the end of the second semester.

ECTS: 6

Notes:
This course will be accompanied by two tutorials. Participation in a tutorial is voluntary but highly recommended.

Learning Outcome:
Students are able to: (a) reproduce the key features of all the literary periods from the Renaissance to the present; (b) list and describe a range of texts written in different genres; (c) contextualize these texts by relating them to their specific historical, cultural and artistic contexts; (d) identify specific features of a particular literary period in textual examples; (e) outline the most important schools in literary theory and apply theoretical concepts in their discussion of literary texts.

Module Voice Analysis (Supplement: Research Paper)
06SM440-621 / Module

Description:

General description:
Next to containing a linguistic message, voices play an essential role in human social interaction. Humans can recognize other individuals by their voice, rely on being recognized and recognition failure is a social misconduct that can lead to high embarrassment. Voices signal the emotional state, the fertility in females and help selecting the right mating partner. Voices are a key part of our personality and shape the trust we have in others. Non-speech information in voice has traditionally be viewed as noise in the speech signal that needs to be cancelled out. Recent research, however, shows that non-speech information in voice actually enhances speech communication.

ECTS: 3

Learning Outcome:
In this research module the acquired knowledge from the seminar 'Voice analysis' will be applied to an experimental study. Students will (a) design their own experimental study in the field of phonetics, (b) do an in depth literature review on their topic, (c) carry out the study and (b) write an extended report on the study.

Module Greek Prose Composition II
06SM321-006 / Module

Description:

General description:
In den beiden Teilen der Sprachübungen werden die aus der Schule oder aus dem Graecum vorhandenen Kenntnisse in Grammatik, Stilistik, Semantik und Wortschatz aufgefrischt und wissenschaftlich vertieft. Zu diesem Zweck wird die massgebliche Grammatik (Bornemann/Risch) in zwei Semestern systematisch durchgearbeitet; ausserdem werden Formenkenntnisse und Wortschatz (Meyer/Steinthal) gefestigt und ausgebaut. Der Fokus liegt auf dem Erwerb einer aktiven Sprachbeherrschung, die anhand der Übersetzung von Einzelsätzen und kurzen Texten aus dem Deutschen ins Altgriechische eingeübt wird. In Sprachübungen II wird insbesondere die Syntax von Haupt- und Nebensatz mit Fokus auf Aspekt, Modus, Infinitiv und Partizip behandelt. Das Modul Sprachübungen I wird nicht zwingend vorausgesetzt, aber aus inhaltlichen Gründen wird empfohlen, mit Sprachübungen I zu beginnen. Die griechischen Stilübungen setzen die Sprachübungen auf einem höheren Niveau fort.

ECTS: 6

Learning Outcome:
Fortsetzung von Sprachübungen I, mit neuem thematischem Schwerpunkt Syntax von Haupt- und Nebensatz.

06SM321-007 / Module

Description:

General description:
In der schriftlichen Prüfung zu diesem Modul ist ein vorher nicht gelesener Originaltext von mittlerer Schwierigkeit in korrektes Deutsch (oder eine andere Landessprache) zu übersetzen. Die Übersetzung muss ohne Zuhilfenahme des Originals verständlich sein und erkennen lassen, dass sowohl der Gedankengang des Textes als auch seine Konstruktionen verstanden wurden. Vorausgesetzt werden erstens die Grammatik von Bornemann/Risch und der Wortschatz von Meyer/Steinthal. Zweitens ist die Übersetzungskompetenz durch eine intensive Lektüre von Primärtexten zu erwerben. Bei der Auswahl können individuelle Interessen berücksichtigt werden, wobei die Wegleitung Empfehlungen zu den Texten sowie Richtlinien zum Umfang enthält. Für die interpretatorischen Zusatzfragen der Prüfung werden drittens die bereits absolvierten Module sowie das Studium einer Literaturgeschichte vorausgesetzt. Im Akzess werden die nötigen Kenntnisse für den Besuch von Seminar-Modulen erworben.

ECTS: 6

Module Term Paper (Master, Medieval Latin)
06SM324-501 / Module

Description:

General description:
Die Seminararbeit wird in der Regel mit einem Seminar-Modul zu semesterweise wechselnden Themen kombiniert, kann aber, wenn die Lehrperson einverstanden ist, auch zu einer anderen Veranstaltung oder unabhängig von einer anderen Veranstaltung geschrieben werden. In Absprache mit der Lehrperson wird ein Thema ausgewählt, zu dem fristgerecht eine Arbeit zu verfassen ist. Seminararbeiten festigen die Fähigkeiten, sich an formale Kriterien zu halten, Fragestellungen korrekt und nachvollziehbar zu behandeln, Erkenntnisse angemessen zu ordnen und Methoden nachprüfbar anzuwenden.

ECTS: 3

Learning Outcome:
In der schriftlichen Arbeit zeigen Studierende, dass sie in der Lage sind, auf der Grundlage eines Primärtextes, in Auseinandersetzung mit der Sekundärliteratur, systematisch und wissenschaftlich seriös sowie unter Wahrung der äusserlichen Form und der zeitlichen Vorgaben einen eigenen Standpunkt zu entwickeln. In Seminararbeiten liegt der Fokus darauf, wissenschaftliche Sachverhalte selbständig zu analysieren und Forschungsmeinungen kritisch zu hinterfragen.

In diesem Modul wird eine schriftliche Arbeit verfasst, bei der die Studierenden einen selbst gewählten thematischen Aspekt aus der slavistischen Sprachwissenschaft mit empirischer oder theoretischer Schwerpunktsetzung vertiefen. Dabei geht es darum, den aktuellen Stand der Forschung zu erarbeiten und unterschiedliche Methoden zur Bearbeitung der gewählten Fragestellung zu reflektieren. Diese Fragestellung stammt aus dem Umfeld einer Lehrveranstaltung im Rahmen eines Moduls aus der Modulgruppe (Slavische) Sprachwissenschaft.

ECTS: 6

Notes:
Die Seminararbeit wird entweder im gleichen Semester oder im Folgesemester an den Besuch eines Moduls aus der Modulgruppe "(Slavische) Sprachwissenschaft" in Absprache mit der Dozentin oder dem Dozenten gebucht.

Learning Outcome:
Ziel des Moduls ist die vertiefte Auseinandersetzung mit einer Fragestellung der slavistischen Linguistik im Rahmen einer schriftlichen Arbeit. Im Zentrum steht dabei der Ausbau der Fähigkeit zur wissenschaftlichen Reflexion und argumentativen Disskussion sowie das Sammeln von Erfahrung mit sprachwissenschaftlichen Forschungsmethoden.

Module Kanbun/Kundoku
06SM290-502 / Module

Description:

General description:
Kanbun bezeichnet im weitesten Sinne das mit chinesischen Schriftzeichen niedergelegte japanische Schrifttum, das bis in die frühe Moderne hinein den grössten Anteil der japanischen Literatur ausmachte. Dabei können in kanbun sowohl Texte verschriftlicht sein, die sich stark an der Grammatik des klassischen Chinesisch orientieren, als auch solche, die nahe am gesprochenen Japanisch ihrer Zeit sind. Möglich ist dies aufgrund einer kundoku genannten Lesetechnik. Da der grösste Teil der vormodernen Literatur in kanbun verfasst worden ist, sind kanbun-Kenntnisse für die wissenschaftliche Beschäftigung mit Japan unabdingbar. Die wesentlichen Elemente der Grammatik des kanbun/kundoku- Stils werden vorgestellt, und ihre Erschliessung wird anhand von Textbeispielen geübt. In der gemeinsamen Lektüre einschlägiger Texte werden Möglichkeiten der Interpretation diskutiert. Studierende erlernen ein Standard-Verfahren zur Darstellung und kommentierten Übersetzung von kanbun/ kundoku-Texten.

ECTS: 3

Learning Outcome:
Kenntnisse von Grammatik und Vokabular des kanbun/kundoku-Stils; Fähigkeit, im kanbun/kundoku-Stil verfasste Dokumente zu erschliessen, zu transkribieren, zu übersetzen und zu kommentieren.

Module History Digitized World
06SM598-503 / Module

Description:

General description:
Die Übung bietet eine methodische und theoretische Einführung in die Herausforderungen der Geschichtsschreibung in der digitalisierten Welt. Dabei geht es um die Frage, wie digitale Operationen die Herstellung und Archivierung von Wissen verändern und welche geopolitischen und epistemischen Implikationen mit diesen Umbrüchen verbunden sein könnten. Es setzt sich zum Ziel, mittels Tutorien basale Kenntnisse der Programmierung zu vermitteln, grundlegendes Wissen über digitale Infrastrukturen (in Bezug auf Text, Bild, Ton, Statistiken) zu erwerben und schliesslich auch, Methoden zur Erforschung der Geschichte der Digitalisierung zu erproben. Das Seminar ist forschungsnah angelegt und ermuntert die Studierenden, mit den erworbenen Kenntnissen im Rahmen ihrer Schreibpraxis und auch mittels digitalen Präsentationsformen zu experimentieren.

ECTS: 9

Learning Outcome:
Interdisziplinäre Zugänge zur Erforschung des digitalen Wandels kennen, verschiedene Formen der digitalen Geschichtsschreibung analysieren und ausprobieren.

Module Varieties of Economic History
06SM599-504 / Module

Description:

General description:
This seminar aims to discuss the methodological, theoretical and empirical variety of economic history. In contrast to other source-based research seminars, the final goal of the seminar is to help students write an in-depth analytical paper based on secondary literature. This seminar will not provide a survey of classical authors, themes and approaches but rather, through a selected list of important monographs, will explore how economic history is written today. We will in particular focus on the differences, boundaries, and overlaps between qualitative and quantitative approaches as well as between economic history and other neighborly disciplines or fields of historical inquiry. Discussions will be held in English but short contributions and research papers can be written in German, French or English.

ECTS: 12

Learning Outcome:
Absolvierende haben gelernt, komplexe wirtschaftshistorische Zusammenhänge differenziert und verständlich in verschiedenen Textsorten darzustellen. Absolvierende können in komplexen wirtschaftshistorischen Zusammenhängen denken und diese darstellen.
Erlangen vertiefender Kenntnisse in quantitativen ökonomischen sowie in qualitativen sozial- und wirtschaftsgeschichtlichen Argumentationsweisen.

Description:

General description:
Das propädeutische Modul beinhaltet mehrere Veranstaltungen: Die Vorlesung gibt einen Überblick über die spezifischen Gegenstände und Forschungsperspektiven der Filmwissenschaft und ermöglicht das Einüben wissenschaftlicher Grundkompetenzen (Recherchieren, Zitieren, Analysieren von Texten, Präsentieren und Formulieren von Erkenntnissen). Das Seminar vermittelt die Kenntnis der audiovisuellen Parameter, führt in die methodischen Zugriffe der Filmanalyse sowie in die fachspezifische Terminologie ein und macht mit den Grundlagen von Filmästhetik und -technik, von Stil- und Genrekonventionen vertraut. Im Selbststudium werden die Inhalte der anderen Veranstaltungen durch eine Filmliste, eine Literaturliste und ein E-Learning-Angebot ergänzt. Dessen Ziel ist, dass die Studierenden die analytische, theoretische und historische Auseinandersetzung mit Film und Kino selbständig weiter vertiefen. Module Concepts in Modern Film Theory
06SM255-005 / Module

Description:

General description:
Die Vorlesung «Ansätze der modernen Filmtheorie» vermittelt im Dialog mit Filmbeispielen die zentralen Paradigmen, Denkfiguren und Argumente etablierter und zeitgenössischer Filmtheorien seit den 1960er Jahren. Dabei kommen zeichentheoretische (Semiologie / Semiotik) ebenso wie erzähltheoretische (Narratologie / Neo-Formalismus) oder feministische, phänomenologische und post-phänomenologische Perspektiven zur Sprache. Die Vorlesung basiert auf zwei Prämissen: (1) Die Begriffe und Theorien sind nicht abstrakt, sondern in ihrer historischen, kulturellen und technologischen Situiertheit darzustellen: Filmtheoretisches Denken entwickelt sich im Rahmen von Institutionen und Infrastrukturen, auf der Basis spezifischer Zugriffsmöglichkeiten und Verfügbarkeiten von Filmen (im Kino, am Schneidetisch, auf VHS-Kassetten, DVD oder per Streaming) und im Kontext spezifischer disziplinärer Konstellationen. (2) Innerhalb einzelner Paradigmen und Schulen gilt es, die Diversität und den Widerstreit unterschiedlicher Positionen abzubilden: Filmtheorie erscheint nicht als Abfolge von Paradigmen, sondern als Ineinander von Kraft- und Konfliktfeldern, als Dynamik von Austausch und Abgrenzung zwischen unterschiedlichen Denkstilen und Konjunkturen. Zu berücksichtigen sind dabei die traditionelle Dominanz europäischer und anglo-amerikanischer Modelle und die damit verbundenen Limitierungen. Die Einbeziehung von Theorieimpulsen aus dem «Dritten Kino» und anderer Positionen aus dem Globalen Süden soll hier ein Gegengewicht andeuten. Auch die veränderten Rahmenbedingungen von Film und Kino in den letzten Jahrzehnten (Post-Cinema, Digital Humanities, Anthropozän etc.) werden auf ihre filmtheoretischen Folgen hin befragt. Im zweiten Teil der wöchentlichen Veranstaltung wird jeweils ein Film gezeigt, der die Themen und Fragestellungen der Vorlesung aufgreift, verhandelt oder konterkariert. Der Besuch dieser Film-Visionierungen ist Bestandteil der Vorlesung.

ECTS: 6

Learning Outcome:
Ziel ist das Erlangen von grundlegenden filmtheoretischen Kompetenzen und Kenntnissen über moderne theoriegeschichtliche Ansätze und ihre Problemfelder in der zweiten Hälfte des 20. Jahrhunderts bis zur Gegenwart.

Module Introduction to Qualitative Methods
06SM615-021 / Module

Description:

General description:
Dieses Modul leistet eine Einführung in die qualitative Methodik der empirischen Politikwissenschaft. Behandelt werden unterschiedliche erkenntnistheoretische Sichtweisen des qualitativen Paradigma, für die qualitative Forschung typische Untersuchungsdesigns (wie etwa Fallstudien), die verschiedenen Methoden der Erhebung (wie Dokumentenanalyse, Interview, oder Beobachtung) und Analyse qualitativer Daten (wie Objektive Hermeneutik, Qualitative Inhaltsanalyse, Grounded- Theory etc.). Unter qualitativen Daten werden hier Daten in Form von Text, aber auch andere nicht-numerische Daten (wie Bilder) verstanden. Weiter werden die Qualitätskriterien der qualitativen Sozialforschung sowie die Logik der Triangulation vermittelt und ein Einblick in die Kombinationen qualitativer mit quantitativer Methoden gegeben (quantifizierende Methoden, mixed-methods). Das erworbene Wissen wird in semesterbegleitenden kleineren schriftlichen Übungen abgefragt.

ECTS: 6

Learning Outcome:
Die Studierenden kennen die erkenntnistheoretischen Grundlagen der qualitativen Sozialforschung sowie die Instrumente zur Erhebung und Auswertung qualitativer Daten und sind in der Lage, einfache qualitative Analysen durchzuführen und die Qualität von qualitatischer Forschung zu beurteilen.

Module Current Issues of Political Sciences (Lecture)
06SM615-034 / Module

Description:

General description:
Die Politikwissenschaft befasst sich mit vielfältigen Fragen zu politischen Ereignissen, Prozessen, Strukturen und Akteuren mit vielfältigen theoretischen Ansätzen und einem breiten methodischen Instrumentarium. Als in diesem Sinne pluralistische Wissenschaft sieht sich die Politikwissenschaft mit kritischen innerfachlichen Debatten zu Grundlagen und Vorgehensweisen konfrontiert. Zudem stellt die "Politik" ein sich stetig wandelnder Forschungsgegenstand dar, der immer wieder neue analytische Herausforderungen stellt. Nicht zuletzt stellt die Politikwissenschaft und ihre Befunde auch immer wieder Element der politischen Auseinandersetzung dar. Dieses Modul greift aus dieser Thematik jeweils einen spezifischen Aspekt heraus, beleuchtet ihn aus verschiedenen Blickwinkeln und stellt ihn in einen weiteren Kontext.

ECTS: 3

Learning Outcome:
Fachkompetenzen: Kenntnisse in einer durch die Politikwissenschaft besonders debattierten Thematik respektive der politikwissenschaftlichen Beitrag zu aktuellen politischen Debatten Methodenkompetenzen: Analysefähigkeit; Kenntnisse ausgewählter methodischer Instrumente und deren Anwendung; Fähigkeit zur Methodenevaluation und -kritik Selbstkompetenzen: Selbstorganisation; Recherchefähigkeit; Reflexionsfähigkeit.

Module Research Design
06SM615-504 / Module

Description:

General description:
Gültige kausale Ansprüche sind vielleicht der heilige Gral der Wissenschaft, und sie zu erreichen ist keine Kleinigkeit. Darüber hinaus verwenden Wissenschaftsphilosophen sehr unterschiedliche Kausalvorstellungen, so dass ein gültiger Kausalanspruch aus einer Perspektive überhaupt kein gültiger oder kausaler Anspruch aus einer anderen Perspektive sein muss In diesem Kurs diskutieren wir verschiedene philosophische Sichtweisen der Kausalität. Wir übersetzen diese Ansichten in verschiedene Forschungsdesigns, die geübt werden. Themen können vergleichende Fallstudien, qualitative Vergleichsanalysen, experimentelles Design, Matching und Subklassifikation, Differenzen, synthetische Kontrolle, instrumentelle Variablen, Regressionsdiskontinuitätsdesigns, Prozessverfolgung, Mediationsanalyse und gemischte Methoden sein.

ECTS: 6

Notes:
Es wird davon ausgegangen, dass Grundkenntnisse über Wahrscheinlichkeitstheorie und statistische Inferenz vorhanden sind.

Learning Outcome:
Nach Abschluss des Moduls sollten die Studenten (1) ein Verständnis für verschiedene Kausalzusammenhänge haben; (2) verstehen, wie diese Zusammenhänge sich in methodischen Praktiken reflektieren; (3) ein Verständnis für spezifische Methoden haben, um kausale Schlussfolgerungen zu ziehen; (4) in der Lage sein, Forschung zu kritisieren, die kausale Ansprüche stellt; und (5) wissen, wie man eine eigene kausale Studie entwirft.

Module Basic Theories of Communication Science
06SM254-002 / Module

Description:

General description:
Die Vorlesung bietet einen Überblick über wichtige sozialwissenschaftliche Basistheorien, die zum Verständnis aktueller kommunikationswissenschaftlicher Forschung unerlässlich sind. Dabei wird auch erörtert, was die einzelnen Theorien und Denkansätze zu «leisten» vermögen und welche Erklärungen sie für die Forschungsobjekte unseres Faches anbieten.

ECTS: 6

Notes:
Aufzeichnung wird nach den Vorlesungssitzungen via OLAT zur Verfügung gestellt.

Learning Outcome:
Die Studierenden haben einen Überblick über sozialwissenschaftliche Basistheorien, die für die Kommunikationswissenschaft bedeutsam sind. Sie kennen Gegenstände, Grundbegriffe, Kernaussagen, Implikationen (normative, methodische etc.) dieser Theorien. Sie haben ein Verständnis für die Unterschiede zwischen den Theorien und ihre Leistungen bezogen auf einzelne Fragestellungen des Fachs entwickelt.

General description:
Gesellschaftliche und technische Entwicklungen verändern die strukturellen Grundlagen des schweizerischen Mediensystems. Um diese rasanten und
z.T. widersprüchlichen Entwicklungen wissenschaftlich fundiert interpretieren zu können, vermittelt die Einführungsvorlesung Grundlagenwissen über die Strukturen von Medienunternehmen, medienpolitische Massnahmen (z.B. öffentliche Finanzierung von SRG und Privatsendern) und die zugrunde liegenden historisch-gesellschaftlichen Entwicklungen.

ECTS: 3

Learning Outcome:
Einführung in ein zentrales Themengebiet der Publizistik- und Kommunikationswissenschaft. Sie erwerben spezifische Analyse- und Reflektionskompetenzen, die es Ihnen ermöglichen, Theorien, Studien und Aussagen im jeweiligen Fachgebiet kritisch zu vergleichen und zu bewerten. Den Studierenden wird vermittelt auf welchen Grundlagen spezifischere Inhalte aufbauen.

Module Communication and Media Law
06SM254-054 / Module

Description:

General description:
Medienrecht setzt den normativen Rahmen der Kommunikation. Es schützt die Freiheit der Medienschaffenden, gewährt aber auch den Betroffenen Rechte. Der Zugang zum Medienrecht ist eigentümlich: Ein "Mediengesetz" existiert nicht, die Rechtsquellen sind vielfältig, technische Möglichkeiten ändern sich laufend, politische Empfindlichkeiten kommen und gehen. Die Vorlesung setzt daher auf stabile Disziplinen des Medienrechts: Verfassungsrecht, Wirtschaftsrecht, Rundfunkrecht, Urheberrecht, Persönlichkeitsrecht und Datenschutz. Es werden alle für die Medien relevanten Vorschriften behandelt und der Stoff anschaulich mit vielen Beispielen präsentiert. Es werden Zusammenhänge dargestellt und die wichtigsten Rechtsfälle genannt, nicht zuletzt solche aus dem Bereich Internet/Neue Medien.

ECTS: 3

Learning Outcome:
Die Studierenden kennen Zweck und Regelungsgegenstand der Rechtsgebiete, welche für die Medien relevant sind. Sie können medienrechtliche Fallkonstellationen zu Rechtsfragen zuordnen und grob beurteilen. Sie verstehen medienrechtliche Theorien und Praxis und können diese mit Blick auf die Medienpolitik weiterdenken.

Die Vorlesung befasst sich mit Werbung als Kommunikationsprozess.
Dabei werden die historischen und aktuellen Entwicklungen der Werbung im Rahmen der Medien- und Informationsgesellschaft (Interaktivität, Personalisierung, Integration) besprochen. Die Vorlesung widmet sich einer akteurszentrierten Perspektive von Werbung. Die Sprecher und Produzenten, mithin die Kommunikatoren der Werbung, ihre wechselseitigen Beziehungen und Interessenskonstellationen werden aufgearbeitet, u.a. um die Netzwerkartigkeit werblicher Kommunikation aufzuzeigen. Ferner werden exemplarische Formate und Formen der Werbung hinsichtlich Struktur der Werbekommunikation, Werbeträger und Werbebotschaften analysiert.

Module Introduction to Statistics and Data Analysis
06SM254-014 / Module

Description:

General description:
Das Modul besteht aus einer Vorlesung und zwei aufeinander abgestimmten Übungen. In der Vorlesung werden die Grundkenntnisse der deskriptiven und induktiven Statistik vermittelt, die zum Handwerkszeug der empirischen Forschung und zum Verstehen der Forschungsansätze und
-berichte erforderlich sind. Folgende Themenbereiche werden behandelt: Lageparameter, Streuungsparameter, Höhere Momente, Grundlagen der induktiven Statistik, Schätzen, Testen, bivariate Zusammenhangsmessung. In den Übungen werden einerseits die statistischen Kenntnisse aus der Vorlesung mit kleinen Übungsaufgaben vertieft. Andererseits wird in das Open-Source-Projekt R eingeführt, das syntaxbasiert statistische Analysen erlaubt. Statistische Fragestellungen aus der Vorlesung werden mit R umgesetzt und die statistischen Ergebnisse interpretiert.

ECTS: 9

Notes:
Aufzeichnung vorhanden. Die Anmeldung für die Übungsgruppen erfolgt über OLAT.
Die Website mit allen Informationen finden Sie hier:
ikmz-statistik.pages.uzh.ch/begleiterin-FS26

Learning Outcome:
Die Studierenden verfügen über grundlegendes Wissen im Bereich der deskriptiven Statistik und der Inferenzstatistik sowie der Datenanalyse mit der statistischen Open-Source-Software R. Die Studierenden verfügen über Analyse-/Reflexionskompetenz, die es Ihnen ermöglicht, einfache statistische Analysen in Forschungsberichten zu interpretieren und kritisch zu vergleichen. Die Studierenden sind in der Lage, kleinere statistische Aufgaben selbstständig zu lösen, die entsprechenden Analysen in R auszuführen und die ausgegebenen Ergebnisse zu interpretieren. Die Studierenden sind in der Lage, einführende Statistikliteratur zu lesen und sich zusätzliche Kenntnisse anzueignen.

Module Master's Thesis
06SM248-MA / Master Paper / MA-Arbeit

Description:

General description:
Students independently develop a theoretical and methodological level-specific final thesis. The timeline is set to a maximum of twelve months (two semesters). The master thesis is supported by a supervising person.

ECTS: 30

Notes:
The Master's thesis process begins with preliminary meetings held by the divisions towards the end of every semester, which will be announced on the IKMZ website and via email. During these meetings, you will be informed about research topics of the divisions, potential topics for Master's theses, and supervisors. Following the preliminary meetings, students will draft a concept for their Master's thesis and submit it via this online form. The deadline for submitting the concept is June
30th to start in the fall semester and January
5th for a start in the spring semester. Based on the topics, priorities, and capacities, the concepts will be distributed among all eligible supervisors. After the allocation process is completed, you will be contacted by your supervisor. The confirmation of su-pervision is a prerequisite for registering for the Master's thesis and the Master's colloquium.

Module Theory of Science and Principles of Research
06SM254-502 / Module

Description:

General description:
Im Modul wird ein analytischer Blick auf die gängige empirische Forschungspraxis geworfen ("Blick von oben", d.h. aus der Metaperspektive). Zentrale Ansätze der Wissenschaftstheorie werden besprochen und diskutiert. Besonders eingegangen wird auf den Kritischen Rationalismus, seine Kritik und seine Weiterentwicklungen. Gängige Forschungslogiken werden wissenschaftstheoretisch eingeordnet. Das kommunikationswissenschaftliche Experiment als zentrales Instrument der Theorieprüfung wird vor allem aus der Validitätsperspektive diskutiert und zu anderen Verfahren zur Überprüfung von Kausalhypothesen in Beziehung gesetzt.

ECTS: 6

Learning Outcome:
Die Studierenden sind auf den wissenschaftstheoretisch und forschungslogisch kompetenten Umgang mit dem eigenen Masterprojekt sowie auf das wissenschaftliche Arbeiten als Mitglied einer Scientific Community vorbereitet. Die Studierenden kennen zentrale wissenschafts-theoretische und forschungslogische Ansätze, insbesondere den Kritischen Rationalismus sowie die Kritik daran und zentrale Weiterentwicklungen. Sie sind in der Lage, Validitätsaspekte in Experimenten und anderen Forschungsdesigns zu beachten und zu beurteilen. Sie verstehen die Forschungslogik auch in komplexen empirischen Projekten und können sie kritisch einordnen.

Module Qualitative Methods: Emphasis on Project Conception
06SM226-015 / Module

Description:

General description:
Im Rahmen des Moduls werden Grundlagen qualitativer Forschung erarbeitet, welche u.a. die Basis für die Konzeption eines eigenen Forschungsvorhabens bilden. Neben methodologischen Grundlagen, Standards und dem qualitativen Forschungsprozess, setzen sich die Studierenden mit einer Auswahl erziehungswissenschaftlich relevanter qualitativer Erhebungs- und Auswertungsmethoden theoretisch und ansatzweise praktisch auseinander. Darüber hinaus wenden sie das erworbene Wissen und Können auf die Konzeption eines eigenen Projektes (z.B. für eine Bachelor-Arbeit) und dessen schriftliche Ausarbeitung an. Das Modul wird ab FS 2020 jedes zweite Frühjahrssemester angeboten.

ECTS: 9

Learning Outcome:
Erwerb von Grundlagenkenntnissen zu qualitativer Forschung; Orientierung im Bereich qualitativ-empirischer Sozialforschung in der Erziehungswissenschaft; Kenntnis der Bedeutung qualitativer Sozialforschung für die Erziehungswissenschaft sowie für die eigene Studien- und Berufspraxis; Befähigung, eine Auswahl an qualitativen Erhebungs- und Auswertungsmethoden in Grundzügen anwenden zu können; Befähigung, qualitative Studien kritisch reflektieren und einordnen zu können; Befähigung zur Entwicklung und zum Verfassen eines Forschungskonzeptes.

Diese berät die Studierenden und erteilt Auskunft über die Anforderungen. Je nach Lehrstuhl werden mögliche zu bearbeitende Themen angeboten, welche der eigenen Themenwahl Orientierung bieten. Die Themenwahl ist grundsätzlich Sache der Studierenden. Der Umfang der Arbeit beträgt 35 bis max. 45 Seiten (ohne Titelblatt, Inhalts- und Literaturverzeichnis sowie Anhang).

ECTS: 15

Learning Outcome:
Die Bachelorarbeit ist der Ausweis über die Fähigkeit, eine wissenschaftliche Aufgabenstellung innerhalb der vorgegebenen Frist selbständig zu bearbeiten und adäquat darzustellen. Die Studierenden können im Bereich der Erziehungswissenschaft relevante wissenschaftliche Literatur adäquat recherchieren, korrekt und einheitlich zitieren sowie kritisch diskutieren. Sie erlangen überdies die Fähigkeit, wissenschaftliche Zusammenhänge inhaltlich korrekt und graphisch angemessen zu präsentieren, Sachverhalte prägnant zu formulieren und logisch zu argumentieren.

Module Specialisation: Vocational Education and Training and Economic Education
06SM233-501 / Module

Description:

General description:
Die mündliche Prüfung dauert 45 Minuten und wird bei einem/r am Studienprogramm beteiligten Professor/in nach Wahl abgelegt. Die Studierenden beschäftigen sich in diesem Modul einerseits mit allgemeiner sowie einschlägiger Forschungsliteratur und vertiefen andererseits ein Thema nach Wahl. Dabei bezieht sich rund die Hälfte der Prüfungsliteratur auf eine Auswahl von (Grundlagen-)Werken, die vom Studiengang vorgegeben wird. Die Studierenden sind dazu angehalten, zur ausgehandelten Literatur ein Thesenpapier vorzubereiten, welches den Ausgangpunkt der mündlichen Prüfung darstellt. Sie nehmen frühzeitig - am besten im Vorsemester und vor allem vor der Buchung des Moduls - mit dem/r Professor/in ihrer Wahl Kontakt auf, um Themen, Thesenpapier und Datum der Prüfung vorgängig abzusprechen. Idealerweise findet die Prüfung zu Beginn der Vorlesungszeit statt. Es gelten die üblichen Buchungsfristen und regulären Notenabgabetermine der Fakultät.

ECTS: 6

Learning Outcome:
Vertiefte und fokussierte Auseinandersetzung mit theoretischer und empirischer Literatur zu einem eigenständig ausgewählten Themenbereich des Studienprogramms Berufs- und Wirtschaftspädagogik.

Module Specialisation: Education in the Life- Course
06SM234-501 / Module

Description:

General description:
Die mündliche Prüfung dauert 45 Minuten und wird bei einem/r am Studienprogramm beteiligten Professor/in nach Wahl abgelegt. Die Studierenden beschäftigen sich in diesem Modul einerseits mit allgemeiner sowie einschlägiger Forschungsliteratur und vertiefen andererseits ein Thema nach Wahl. Dabei bezieht sich rund die Hälfte der Prüfungsliteratur auf eine Auswahl von (Grundlagen-)Werken, die vom Studiengang vorgegeben wird. Die Studierenden sind dazu angehalten, zur ausgehandelten Literatur ein Thesenpapier vorzubereiten, welches den Ausgangpunkt der mündlichen Prüfung darstellt. Sie nehmen frühzeitig - am besten im Vorsemester und vor allem vor der Buchung des Moduls - mit dem/r Professor/in ihrer Wahl Kontakt auf, um Themen, Thesenpapier und Datum der Prüfung vorgängig abzusprechen. Es gelten die üblichen Buchungsfristen und regulären Notenabgabetermine der Fakultät.

ECTS: 6

Learning Outcome:
Vertiefte und fokussierte Auseinandersetzung mit theoretischer und empirischer Literatur zu einem eigenständig ausgewählten Themenbereich des Studienprogramms Bildung im Lebenslauf.

Module Development and Biography
06SM234-503 / Module

Description:

General description:
Entwicklungstheorien und Biografieforschung bilden ein Gefüge von Interessens-, Verstehens- und Untersuchungsperspektiven, welche in ihrem Fokus und ihrer Differenz entscheidend dazu beitragen, die Rolle der Bildungsprozesse des Individuums (und die sie dabei unterstützenden oder behindernden institutionellen und gesellschaftlichen Rahmenbedingungen) über die Lebenszeit zu verstehen. Biografische Bemühungen als das Nachzeichnen, Nacherzählen, Nachvollziehen und Verorten der Bedingungen der Entwicklung und "eigener Gewordenheit" (der ersten Person Singular) sind als Bildungsprozesse par excellence zu betrachten. Diese in der (deutschsprachigen) bildungstheoretischen Tradition fussende Ausrichtung der pädagogischen Theorie und Praxis auf "Personbildung" hat heute Eingang und den Status der Selbstverständlichkeit in vielen sozialwissenschaftlichen Ansätzen und Zugängen gefunden (wie z.B. der Narratologie). Das Modul wird ab FS 2020 jedes zweite Frühjahrssemester angeboten.

ECTS: 6

Learning Outcome:
Erwerb theoretischer und empirischer Kenntnisse zur Biografie- und Entwicklungsforschung sowie der methodischen Grundlagen zur Erforschung von Bildungsprozessen und -verläufen und individuellen Sinnkonstruktionen; Befähigung, die Möglichkeiten und Grenzen der Biografie- und Entwicklungsforschung anhand bestehender Kenntnisse aus der Forschung zu diskutieren.

06SM226-501 / Module

Description:

General description:
Die Abschlussprüfung, die im gewählten Schwerpunkt absolviert wird, dauert 45 Minuten und kann nach Wahl bei einem/r am Schwerpunkt beteiligten Professor/in abgelegt werden. Die Studierenden nehmen frühzeitig - am besten im Vorsemester und vor allem vor der Buchung des Moduls sowie der online-Prüfungsanmeldung - mit dem/r gewünschten Prüfer/in Kontakt auf, um die Prüfungsthemen zu definieren und die Literaturliste, welche in der Regel sechs einschlägige Monographien und zwölf Aufsätze umfassen soll, zu vereinbaren. Die Studierenden legen vorgängig zur Prüfung ein Thesenpapier vor. Das Prüfungsgespräch kann mit einem (vorbereiteten) mündlichen Exposé der Studierenden beginnen, welches fünf bis höchstens zehn Minuten dauern soll. Die Masterabschlussprüfung wird in dem Semester absolviert, in welchem alle für den Abschluss notwendigen Leistungen erbracht werden, d.h. die Prüfung kann frühestens im letzten Studiensemester absolviert werden. Es gelten die üblichen Buchungsfristen und regulären Notenabgabetermine der Fakultät.

ECTS: 6

Learning Outcome:
Die Studierenden können ausgewählte Themen aus einem spezifischen Schwerpunkt selbstständig erarbeiten und ein Thesenpapier dazu formulieren. Im Rahmen der mündlichen Abschlussprüfung können die Studierenden die aufgestellten Thesen vertreten, die aufbereitete Literatur und die verschiedenen thematischen Inhalte miteinander in Beziehung setzen und kritisch dazu Stellung nehmen.

Module Master's Thesis
06SM226-MA / Master Paper / MA-Arbeit

Description:

General description:
Die Masterarbeit wird im Schwerpunkt bei einem/r im Masterstudienprogramm mit Lehre beteiligten Professor/in geschrieben und von diesem/r betreut. Vor der Buchung muss ein von der Betreuungsperson akzeptiertes Konzept mit Fragestellung, Disposition und Quellen-/Literaturangaben für die Arbeit vorliegen. Der Umfang der Masterarbeit umfasst i.d.R. 50 bis 90 Seiten (ohne Titelblatt, Inhalts- und Literaturverzeichnis sowie Anhang). Während des Verfassens der Masterarbeit ist - ebenfalls aus der Modulgruppe "Abschluss" - das Forschungskolloquium des entsprechenden Schwerpunkts zu besuchen. Je nach Stand der Masterarbeit kann in Absprache mit der Betreuungsperson das Forschungskolloquium für ein zweites Semester besucht und die Arbeit ein zweites Mal präsentiert werden.

ECTS: 30

Learning Outcome:
Die Masterarbeit ist der Ausweis über die Fähigkeit, eine stufenspezifische wissenschaftliche Aufgabenstellung innerhalb der vorgegebenen Frist selbständig zu bearbeiten und adäquat darzustellen. Die Studierenden bereiten im Bereich der Erziehungswissenschaft die relevante Forschungsliteratur zum gewählten Thema auf und entwickeln eigenständig eine Fragestellung sowie ein Forschungsdesign. Bei empirischen Arbeiten erheben sie selbstständig Daten und können diese theorie- und methodenbasiert auswerten und in Bezug auf die gewählten theoretischen Grundlagen, den Forschungsstand und die eigens entwickelte Fragestellung analysieren und interpretieren. Sie erlangen zudem die Fähigkeit, sich kritisch mit den gewählten Methoden und dem Forschungsdesign auseinanderzusetzen. Die Studierenden können die Abschlussarbeit gemäss wissenschaftlichen Konventionen verfassen, die Themen flüssig und prägnant formulieren und inhaltlich korrekte und graphisch hochstehende Illustrationen erstellen.

Module Continuing Education within the Context of Society
06SM226-504 / Module

Description:

General description:
Weiterbildung ist ein wichtiger Bildungsbereich, der ausserhalb des öffentlichen Bildungssystems liegt und daher eine grosse Nähe zu unterschiedlichen gesellschaftlichen Teilbereichen und sozialen Kontexten hat. Im Modul lernen die Studierenden die Grundlagen der Weiterbildung über eine Auseinandersetzung mit konkreten Beispielen vertieft kennen, z.B. die zentrale Bedeutung der Teilnehmenden, die Orientierung an bestimmten Zielgruppen, die enge Verbindung zu sozialen Bewegungen und gesellschaftlichen Entwicklungen sowie den Stellenwert der Programmentwicklung aber auch die unterschiedlichen Teilnahmebedingungen und die ungleichen Zugangsmöglichkeiten. Über exemplarische Zugänge werden die Merkmale des Weiterbildungsbereichs in der Schweiz und aktuelle Entwicklungen gemeinsam diskutiert, sodass die Studierenden diese in grössere Zusammenhänge einordnen und im jeweiligen gesellschaftlichen Kontext beurteilen können. Dazu wird mit dem Konzept des Forschenden Lernens gearbeitet, d.h. die Studierenden können zu eigenen Fragestellungen wissenschaftlich arbeiten und sich die Themen auf diese Weise erschliessen.
Das Modul wird ab FS 2020 jedes zweiten Frühjahrssemester angeboten.

ECTS: 6

Learning Outcome:
- Die Studierenden kennen grundlegende Konzepte der Erwachsenenbildung / Weiterbildung und den Bildungsbereich Weiterbildung in der Schweiz.
- Sie können aktuelle Entwicklungen in der Weiterbildung analysieren und sie in gesellschaftliche, ökonomische und politische Zusammenhänge einordnen.
- Sie können in diesem Themenfeld eine eigene Fragestellung formulieren und sie mit Bezug auf relevante wissenschaftliche Literatur bearbeiten und diskutieren.

06SM226-511 / Module

Description:

General description:
Die aktuelle Situation von Bildung und Erziehung lässt sich nur vor dem Hintergrund historischer Entwicklungen verstehen. Das Seminar zielt auf ein besseres Verständnis dieser historischen Entwicklungen, insbesondere im Hinblick auf die Veränderung von Ideen, Konzepten und Positionen. Familien- oder Kindheitsgeschichte), ausgewählte pädagogische Klassiker oder eine pädagogische Grundfrage (z.B. Strafen) bearbeitet. Das Modul wird ab FS 2020 jedes zweite Frühjahrssemester angeboten.

ECTS: 6

Learning Outcome:
Erwerb eines historischen Verständnisses von Bildung und Erziehung sowie von Kenntnissen verschiedener historischer Perspektiven (Ideen-, Institutionen-, Kultur-, Politik-, Mentalitätsgeschichte etc.); exemplarische Auseinandersetzung mit pädagogischen Ideen, Konzepten und Positionen einer Epoche, eines Bildungs- oder Erziehungsbereichs oder mit einer pädagogischen Grundfrage; Befähigung, eine wissenschaftlich und theoretisch fundierte Position überzeugend zu vertreten.

Module Research Seminar
06SM226-513 / Module

Description:

General description:
Das Forschungsseminar gibt die Möglichkeit, innerhalb eines vorgegebenen, breit gefächerten Themengebietes oder im Rahmen eines bestehenden Forschungsprojekts eine eigene Forschungsfrage zu entwickeln und zu bearbeiten. Dabei können - abgestimmt auf die Forschungsfrage - qualitative, quantitative, historische und textanalytische Erhebungs- und Auswertungsmethoden und Forschungsansätze angewendet werden. Die Teilnehmenden erarbeiten sich den Theorie- und Forschungskontext zur gewählten Fragestellung, entwickeln ein Design, führen Erhebungen und Auswertungen durch und interpretieren diese theorie- und forschungsbezogen. Abschliessend erfolgt eine Präsentation der Forschungsarbeit.

ECTS: 6

Learning Outcome:
Erwerb der Fähigkeit zur eigenständigen Entwicklung einer Forschungsfrage, der Aufbereitung der relevanten Forschungsliteratur zur entwickelten Fragestellung, der selbstständigen Auswahl und Begründung des gewählten Forschungsdesigns, der Erhebung von Daten sowie deren theoriebasierten Analyse, zur kritischen Auseinandersetzung mit den gewählten Methoden und dem Forschungsdesign sowie zur Interpretation der Ergebnisse entlang des Forschungsstandes und den gewählten theoretischen Grundlagen.

Module Inclusive Education within the Context of Society: Basics
06SM226-519 / Module

Description:

General description:
Das Modul führt grundlegend in das Themenfeld der Inklusion ein. Einerseits werden Begrifflichkeiten, Wissensbestände und Wissensbezüge thematisiert, die sich in der Sonderpädagogik im Verlauf der Historie entwickelt haben. Andererseits erfolgt eine vertiefte Vermittlung der Entwicklungslinien, Theorien und aktuellen Forschungsergebnisse inklusiver Pädagogik. Zur Reflexion des Spannungsfeldes von Inklusion und Exklusion wird sowohl auf interdisziplinäre als auch auf internationale Diskurse zurückgegriffen, um Mechanismen der Ausgrenzung und Marginalisierung einer differenzierten Analyse zu unterziehen. Besondere Schwerpunkte werden auf neue, partizipative Forschungszugänge, aktuelle Konzepte der Deinstitutionalisierung, Formate selbstbestimmter Lebensführung durch Assistenz aber auch auf Professionalisierungsdiskurse gelegt. Das Modul wird ab FS 2020 jedes zweite Frühjahrssemester angeboten.

ECTS: 6

Learning Outcome:
Erwerb von vertieften Kenntnissen über historische Entwicklungen, Theorien, aktuelle Forschungsergebnisse und Konzepte inklusiver Pädagogik sowie ein differenziertes Problembewusstsein für Mechanismen gesellschaftlicher Ausgrenzung und nicht ausgrenzende, demokratische Diskurse.

Module Theory of Science
06SM226-529 / Module

Description:

General description:
Das Modul "Wissenschaftstheorie" ist Fragen der Voraussetzungen, Methoden und Zielen wissenschaftlicher Erkenntnis im Allgemeinen und der damit verbundenen Besonderheiten im Feld der erziehungswissenschaftlichen Theorie und Empirie gewidmet. Dabei spielen die Diskussion und der Streit um die wichtigsten Merkmale wissenschaftlicher Erkenntnis und die Unterscheidung von wissenschaftlichen und nicht-wissenschaftlichen Theorien und Methoden eine zentrale Rolle. Wissenschaftstheoretische Positionen werden in ihren Bezügen zu erkenntnistheoretischen und methodologischen Voraussetzungen sowie historischen Hintergründen vorgestellt und deren Relevanz für die erziehungswissenschaftliche Theoriebildung und empirische Bildungsforschung diskutiert. Fragen des Stellenwerts von Theorie für die empirische Bildungsforschung werden dabei vertieft behandelt.

ECTS: 3

Learning Outcome:
Erwerb vertiefter Kenntnisse im Bereich der wissenschaftstheoretischen Grundlagen der Erziehungswissenschaft; Befähigung, Alltagstheorien von wissenschaftlichen Objekttheorien und (wissenschaftstheoretischen) Meta-Theorien unterscheiden und an konkreten Fragen der pädagogischen Forschung exemplarisch diskutieren zu können; Kennenlernen der für die erziehungswissenschaftliche Forschung bedeutsamsten wissenschaftstheoretischen Paradigmen und Positionen.

Module Master's Thesis
06SM232-MA / Master Paper / MA-Arbeit

Description:

General description:
Die Masterarbeit wird im Schwerpunkt bei einem/r im Masterstudienprogramm mit Lehre beteiligten Professor/in geschrieben und von diesem/r betreut. Vor der Buchung muss ein von der Betreuungsperson akzeptiertes Konzept mit Fragestellung, Disposition und Quellen-/Literaturangaben für die Arbeit vorliegen. Der Umfang der Masterarbeit umfasst i.d.R. 50 bis 90 Seiten (ohne Titelblatt, Inhalts- und Literaturverzeichnis sowie Anhang). Während des Verfassens der Masterarbeit ist - ebenfalls aus der Modulgruppe "Abschluss" - das Forschungskolloquium des entsprechenden Schwerpunkts zu besuchen. Je nach Stand der Masterarbeit kann in Absprache mit der Betreuungsperson das Forschungskolloquium für ein zweites Semester besucht und die Arbeit ein zweites Mal präsentiert werden.

ECTS: 30

Learning Outcome:
Die Masterarbeit ist der Ausweis über die Fähigkeit, eine stufenspezifische wissenschaftliche Aufgabenstellung innerhalb der vorgegebenen Frist selbständig zu bearbeiten und adäquat darzustellen. Die Studierenden bereiten im Bereich der Erziehungswissenschaft die relevante Forschungsliteratur zum gewählten Thema auf und entwickeln eigenständig eine Fragestellung sowie ein Forschungsdesign. Bei empirischen Arbeiten erheben Sie selbstständig Daten und können diese theorie- und methodenbasiert auswerten und in Bezug auf die gewählten theoretischen Grundlagen, den Forschungsstand und die eigens entwickelte Fragestellung analysieren und interpretieren. Sie erlangen zudem die Fähigkeit, sich kritisch mit den gewählten Methoden und dem Forschungsdesign auseinanderzusetzen. Die Studierenden können die Abschlussarbeit gemäss wissenschaftlichen Konventionen verfassen, die Themen flüssig und prägnant formulieren und inhaltlich korrekte und graphisch hochstehende Illustrationen erstellen.

Module Central philosophical topics and works
06SM160-504 / Module

Description:

General description:
Das Pflichtmodul «Zentrale Themen und Werke der Philosophie» besteht aus einer 45-minütigen mündlichen Prüfung zu einem Thema oder zu zwei philosophischen Werken. Letztere können frei aus den Lektürelisten A und B gewählt werden (vgl. programmspezifische Wegleitung). Es ist möglich, beide Texte aus einer der beiden Lektürelisten zu nehmen oder auch aus jeder Liste ein Text. Zu beachten ist aber, dass die Texte aus der Lektüreliste A bei allen prüfenden Personen gewählt werden können, diejenigen der Lektüreliste B aber nur nach ausdrücklicher Zustimmung durch die prüfende Person. Vor der Buchung des Moduls verständigen Sie sich mit einer Lehrstuhlinhaberin bzw. einem Lehrstuhlinhaber oder einer Privatdozentin bzw. einem Privatdozenten, die oder der im betreffenden Semester mündliche Prüfungen abnimmt (gemäss Vorlesungsverzeichnis), über das Thema bzw. über die zwei Werke. Die Studierenden müssen nach erfolgter Absprache mit der prüfenden Person und der Modulbuchung dem Sekretariat des Philosophischen Seminars (philsem@philos.uzh.ch) das vereinbarte Thema bzw. die gewählten Werke mitteilen (spätestens Ende der Buchungszeit). Das Sekretariat des Philosophischen Seminars versendet in der Regel in der sechsten Woche der Vorlesungszeit die Prüfungspläne mit den genauen Zeit- und Raumangaben. Die im Vorlesungsverzeichnis angekündigten Prüfungstermine sind verbindlich. Studierende, die, aus welchen Gründen auch immer, nicht zum Prüfungstermin erscheinen, informieren möglichst frühzeitig das Sekretariat des Philosophischen Seminars, die prüfende Person sowie (sofern bereits bekannt) die Beisitzerin oder den Beisitzer. Studierende, die aus triftigen und belegbaren Gründen (wie etwa Krankheit) am Prüfungstermin verhindert sind, können ein Stornierungsgesuch einreichen.

ECTS: 6

Module Bachelor's Thesis
06SM200-BA / Bachelor Paper / BA-Arbeit

Description:

General description:
Die Bachelorarbeit ist ein wissenschaftlicher Aufsatz gemäss den in der Psychologie üblichen wissenschaftlichen Standards. Sie erfordert eine selbst erarbeitete Strukturierung eines Themas und beruht auf der Sammlung, der kritischen Auswertung sowie der übersichtlichen und korrekten Darstellung von Fachliteratur, die für die Fragestellung relevant ist. Die Bachelorarbeit muss sowohl inhaltlichen, methodischen als auch formalen Kriterien genügen. Für die Bewertung der Bachelorarbeit gelten unter anderem folgende Kriterien: Inhaltliche Vollständigkeit und Verständnis des Themas, argumentative Kohärenz, Auswahl und Verständnis der Literatur, Einhaltung der formalen Kriterien wie Aufbau und Gliederung der Arbeit, korrektes Zitieren, vollständige Literaturliste, sprachliche Präzision sowie selbständiges Arbeiten. Im begleitenden Workshop Bachelorarbeit wird in die Planung und Gestaltung von wissenschaftlichen Berichten mit besonderem Augenmerk auf die Bachelorarbeit eingeführt.

ECTS: 6

Notes:
Die Themen der Bachelorarbeiten werden von den Professuren ausgeschrieben. Die Studierenden können jedoch bei der Modulbuchung nicht das Thema selbst, sondern nur die Professur, an der sie die Arbeit schreiben möchten, auswählen. Die Themenvergabe erfolgt nach der Buchung. Das genaue Verfahren bestimmen die Professuren. Die Themenliste aller Professuren, die im aktuellen Semester Themen für die Bachelorarbeiten anbieten finden Sie hier: https://t.uzh.ch/1AN

Learning Outcome:
Die Bachelorarbeit ist der Ausweis über die Fähigkeit, eine wissenschaftliche Aufgabenstellung innerhalb der vorgegebenen Frist selbständig zu bearbeiten und adäquat darzustellen. Dabei handelt es sich um die schriftliche Bearbeitung eines vorgegebenen, psychologisch relevanten Themas.

Module Cognitive Neuroscience
06SM200-201 / Module

Description:

General description:
In der Vorlesung werden biologische/neuronale Grundlagen verschiedenster kognitiver Prozesse besprochen. Unter Berücksichtigung aktueller Forschungsergebnisse wird dazu besprochen, wie das Nervensystem bei Mensch und Tier kognitive Phänomene wie etwa Wahrnehmung, Aufmerksamkeit, Motorik, Gedächtnis, Sprache, Kognitive Kontrolle oder Soziale Kognition produziert. Sie werden dazu Wissen zu Aufbau und Funktion des Nervensystems, das Sie unter anderem in den Vorlesungen zur Biologischen Psychologie, erworben haben, anwenden können, um das biologische Substrat menschlichen Denkens und Handlens zu verstehen.

ECTS: 4

Learning Outcome:
Sie erwerben grundlegendes Wissen darüber, wie menschliches Denken und Handeln im Nervensystem entsteht. Dieses Wissen wird später (z.B. in der Neuropsychologie) die Grundlage dafür darstellen, um besser nachvollziehen zu können, wie sich etwa Schädigungen des Nervensystems auf unser Erleben und Verhalten auswirken.

Module Introduction to Clinical Psychology and Psychopathology
06SM200-400 / Module

Description:

General description:
Die Vorlesung bietet eine umfassende und tiefgehende Auseinandersetzung mit der Entstehung, Persistenz und Behandlung psychischer Störungen. Dabei werden die neuesten wissenschaftlichen Entwicklungen in der Psychopathologie, Diagnostik und der Untersuchung von Störungsmodellen thematisiert. Fokusiert wird weiterhin der Zusammenhang zwischen theoretischen Annahmen und innovativen therapeutischen Interventionen. Das Modul besteht aus zwei Veranstaltungen, die über zwei Semester hinweg grundlegende Konzepte, moderne Ansätze und praxisnahe Anwendungsfelder abdecken. Im Herbstsemester beginnt die Veranstaltung mit einer Einführung in die Psychopathologie. Die Vorlesung bietet eine fundierte Auseinandersetzung mit zentralen Konzepten der Psychopathologie und verknüpft diese mit aktuellen Forschungsergebnissen. Zu den behandelten Themen gehören grundlegende Begriffe wie psychische Gesundheit und Störung. Besondere Schwerpunkte sind die Betrachtung einzelner Störungsbilder und ihrer spezifischen Merkmale. Weitere Themen umfassen psychopathologische und diagnostische Modelle (z. B. RDoC und HiTOP) und deren Anwendung, Suizidalität und schwere psychische Erkrankungen, Betrachtungen über die Lebensspanne sowie kulturelle Aspekte. Im Frühjahrssemester liegt der Schwerpunkt auf neuen therapeutischen Ansätzen und deren theoretischen Grundlagen. Die Veranstaltung Einführung in die Klinische Psychologie befasst sich mit ethischen Aspekten der Klinischen Psychologie sowie psychotherapeutischen Grundlagen. Die Teilnehmer:innen lernen moderne diagnostische Konzepte und Methoden zur Veränderungsmessung kennen. Darüber hinaus werden sowohl klassische als auch neue psychotherapeutische Verfahren vorgestellt, wobei aktive Mechanismen, Wirkfaktoren und die therapeutische Allianz im Fokus stehen. Digitale Methoden sowie kontroverse Themen, aktuelle Forschungstrends und hochaktuelle wissenschaftliche Erkenntnisse zur Behandlung spezifischer Störungsbilder werden ebenfalls thematisiert. Als zentrales Lehrbuch für die Vorlesungsreihe dient das Lehrbuch «Klinische Psychologie und Psychotherapie» von Hoyer & Knappe (2021, Springer). Für das gesamte Modul werden 8 Kreditpunkte vergeben.

ECTS: 8

Learning Outcome:
Lernziele der Vorlesung für Teil 1 umfassen die Vermittlung von Grundbegriffen der Psychopathologie und Klinischen Psychologie, die Klassifikationsmethoden, Epidemiologie, Störungslehre und Befunderhebung bei der Diagnostik psychischer Störungen sowie Interventionsmethoden.

Module Psychopathology Taught Online (PTO)
06SM200-402 / Module

Description:

General description:
PTO ist ein computerisiertes Selbstlernprogramm für die Psychopathologie über 2 Semester. Es erfordert ein eigenständiges Durcharbeiten von Curriculum 1 im Herbstsemester, und von Curriculum 2 im Frühjahrssemester. Es soll selbständig ein profundes theoretisches sowie anwendungsorientiertes Störungswissen erarbeitet werden, welches regelmässig anhand von Übungen in Form von e-learning überprüft wird. Im Anschluss an diesen Kurs kennen die Studierenden wichtige psychopathologische Störungsbilder und können diese im klinischen Setting erkennen. Curriculum 1 Herbstsemester: Es werden folgende psychopathologische Störungsbilder selbständig erarbeitet: Affektive Störungen (F3), Neurotische, Belastungs- und somatische Störungen (F4 inkl. F43), Organische Störungen (F0). Curriculum 2 Frühjahrssemester: Persönlichkeits- und Verhaltensstörungen (F6), Verhaltens- und emotionale Störungen mit Beginn in der Kindheit und Jugend (F9), Schizophrenien (F2), Substanzstörungen (F1)

Description:

General description:
Gegenstand der Persönlichkeitspsychologie ist die empirisch fundierte Beschreibung, Erklärung und Vorhersage der grundlegenden Strukturen und Prozesse der Persönlichkeit, die menschliches Erleben und Verhalten bedingen. Die Vorlesung beinhaltet zentrale Konzepte und Forschungsmethoden der Persönlichkeitspsychologie und gibt eine Einführung in zentrale Fragestellungen, Theorien sowie Ergebnisse der empirischen Intelligenz- und Persönlichkeitsforschung. Module Master's Working Group 1
06SM200-901 / Module

Description:

General description:
Die Module «Masterarbeitsgruppe 1» und «Masterarbeitsgruppe 2» sind aufeinander aufbauende Begleitmodule zum Modul «Masterarbeit» und dienen der Betreuung und Begleitung der Studierenden während des Verfassens der Masterarbeit durch die Betreuungsperson. Die beiden Module sind nacheinander zu absolvieren. Pro Semester kann jeweils nur ein Modul belegt werden. Das zuerst zu absolvierende Modul «Masterarbeitsgruppe 1» dient der Vorbereitung der Masterarbeit. Der Fokus liegt auf der Themenfindung und Strukturierung der Masterarbeit und hat zum Ziel, das Konzept der Masterarbeit zu entwickeln. Die Modulbuchungen können erst nach Rücksprache mit der Betreuungsperson der Masterarbeit erfolgen. Ob die Module gemäss Regelcurriculum oder abweichend davon absolviert werden, ist in Absprache mit der Betreuungsperson zu vereinbaren. Der Modulinhalt wird durch die Betreuungsperson der Masterarbeit festgelegt.

ECTS: 2

Learning Outcome:
Die Studierenden erwerben in den Modulen «Masterarbeitsgruppe 1» und «Masterarbeitsgruppe 2» stufenspezifische Kenntnisse über den Aufbau einer wissenschaftlichen Arbeit. Dazu gehören die Planung, Durchführung, Auswertung, Interpretation und Darstellung einer Datenerhebung bzw. Datensimulation oder Sekundäranalyse, die sie auf ihr Masterarbeitsprojekt anwenden. Die allgemeinen Techniken wissenschaftlichen Arbeitens sowie Spezifika der gewählten thematischen und methodischen Ausrichtung können dabei vertiefend angewendet werden.

Module Practice-Oriented Term Paper
06SM640-517 / Module

Description:

General description:
Die praxisorientierte Semesterarbeit dient dazu, den Studierenden einen Einstieg in eine archäologische Amtsstelle zu ermöglichen. Es handelt sich um eine Arbeit im Umfang einer Seminararbeit, die aber nicht an eine Lehrveranstaltung gebunden ist, sondern die Auswertung eines mittelalterarchäologischen Befundes oder Fundkomplexes zum Inhalt hat, den sich die Studierenden selber aussuchen. Sie knüpfen die dazu notwendigen Kontakte zu einer archäologischen Amtsstelle ihrer Wahl und verhandeln mit dieser - in Rücksprache mit der Modulverantwortlichen - über einen im Rahmen einer solchen Arbeit geeigneten Fundkomplex beziehungsweise Befund.

ECTS: 9

Notes:
Vorgängig zur Modulbuchung ist eine Absprache mit der Betreuungsperson erforderlich.

Learning Outcome:
Die Studierenden sind fähig, sich selbstständig in einen Befund oder Fundkomplex aus dem Mittelalter oder der Neuzeit einzuarbeiten und diesen anhand der erlernten Methoden aufzubereiten. Sie sind in der Lage, die dafür notwendigen Kontakte mit einer archäologischen Amtsstelle selbstständig zu knüpfen und in Kooperation mit dieser über ein geeignetes Bearbeitungsobjekt zu verhandeln. Sie können die dafür notwendige Zeit einschätzen und auf der Basis des von der betreffend Amtsstelle zur Verfügung gestellten Dokumentations- und Fundmaterials eine kohärente Abhandlung verfassen.

Module Advanced Archaeological Sciences: Humans
06SM683-502 / Module

Description:

General description:
Im Fokus der Humanbiorachäologie stehen wahlweise klassische anthropologische Untersuchungsverfahren von Fundmaterial und moderne Verfahren wie beispielsweise die Isotopenarchäometrie, die aDNA oder bildgebende Verfahren. Die Lehrveranstaltung vertieft interdisziplinäres Arbeiten und das Erstellen wissenschaftlicher fächerübergreifender Fragestellungen. Durch aktive Beteiligung der Studierenden soll insbesondere das eigenständige Arbeiten und Präsentieren von interdisziplinären Sachverhalten gefördert werden.

ECTS: 6

Learning Outcome:
Die Studierenden erlangen einen sicheren Umgang bei der Bestimmung von insbesondere bioarchäologischem und anthropologischem Fundmaterial. Sie können Untersuchungsverfahren sicher anwenden und Analyseverfahren und Methoden einschätzen. Eine kritische Hinterfragung gängiger Interpretationen von wissenschaftlichen Papers ist den Studierenden möglich. Ziel ist es, eine kultur- und naturwissenschaftliche Arbeits- und Denkweise zu entwickeln.

Module Fieldwork internship in Classical Archaeology
06SM682-513 / Module

Description:

General description:
Vermittelt werden Grundlagen der Ausgrabung und Dokumentation im Feld. Im praktischen Umgang auf der Grabung wenden die Studierenden relevante Methoden und Lerninhalte des gesamten bisherigen Studiums unter Anleitung an, wobei der Transfer auf die Grabung eine besondere, eng am Berufsfeld orientierte Herausforderung darstellt. Die Grabungspraktika stehen damit an der Schnittstelle zwischen universitärer Lehre und beruflicher Praxis. Das Grabungspraktikum wird durch die Fachbereiche des Studienprogramms Archäologien in Form von mindestens vierwöchigen Forschungs- und Lehrgrabungskampagnen organisiert. Diese Einheiten finden im In- wie im Ausland statt und führen die Studierenden an die Praxis der Feldarbeit im Kontext der interdisziplinären Forschung heran. Aufgrund der begrenzten Teilnehmerzahl wird auf das Modul "Externes Berufspraktikum" als Alternative hingewiesen.

ECTS: 6

Notes:
Vorgängig zur Modulbuchung ist eine schriftliche Bewerbung bei der Lehrperson erforderlich.

Learning Outcome:
Die Studierenden kennen Methoden und praktische Anwendungen archäologischer Feldforschung. Gängige Abläufe für Feldprojekte sind ihnen bekannt und sie können diese praktisch umsetzen. Sie haben Erfahrung mit Dokumentationsstandards und dem Umgang mit Werkzeugen und Ausrüstung. Die Studierenden können archäologische Befunde mittels Fotografie, Zeichnung und Vermessung erfassen. Die Handhabung und Archivierung von Fundmaterial ist den Studierenden vertraut. Neben vertiefter Fach- erwerben die Studierenden auch Sozial- und Teamkompetenz bei gemeinschaftlicher Bearbeitung praktischer Aufgaben.

06SM682-MA / Master Paper / MA-Arbeit

Description:

General description:
Die Masterarbeit ist eine eigenständige Forschungsleistung zu einem komplexeren Thema in den Archäologien. Es sind dabei die in dem Fach üblichen Regeln zu befolgen. Das Thema wird mit der Betreuungsperson festgelegt und beruht auf einem eigenen Vorschlag der oder des Studierenden. Ziele, Methoden und Ergebnisse sind im Rahmen des Moduls "Kolloquium" zur Diskussion zu stellen. Die Studierenden erwerben vertiefte Fach- und Medienkompetenzen zur Bearbeitung und Vermittlung eines vertieften wissenschaftlichen Themengebietes.

ECTS: 30

Notes:
Vorgängig zur Modulbuchung ist eine Absprache mit der Betreuungsperson erforderlich. Bei der Modulbuchung ist die Gruppe des entsprechenden Lehrstuhls auszuwählen.

Module History of Research and Concepts of Prehistoric Archaeology
06SM682-009 / Module

Description:

General description:
Archäologische Interpretationen sind von Herangehensweisen, Interessen und kulturellen Aspekten geprägt. Sie entwickeln sich über die Zeit und sind je nach geografischem Raum sehr unterschiedlich. Die Forschungsgeschichte ermöglicht es, Denkströmungen, die zur archäologischen Interpretation führen, zeitlich und kulturell einzuordnen. Das Verständnis von Theorien, Konzepten und Methoden der Prähistorischen Archäologie ermöglicht eine reflektierte Betrachtung von Fund- und Befundanalyse sowie von archäologischen Intepretationen.

ECTS: 6

Learning Outcome:
Die Studierenden lernen, sich mit einem vorgegebenen Thema auseinanderzusetzen und können es sowohl mündlich als auch schriftlich reflektiert darstellen. Zu dem zu erarbeiteten Thema formulieren sie selbständig Fragestellungen. Sie können eigenständig Literatur zu einem Thema recherchieren und nach den vom Institut festgelegten Regeln zitieren. Inhaltlich können die Studierenden Denkweisen und -strömungen zeitlich und gesellschaftlich einordnen. Sie kennen Theorien und Methoden der archäologischen Interpretation.

Module Cultural-historical contexts in Roman Archaeology
06SM682-012 / Module

Description:

General description:
Die Veranstaltung beschäftigt sich in vertiefender Weise mit ausgewählten Fragestellungen und Themen - seien es Kontexte, Denkmäler, Orte, Rituale oder Prozesse - auf dem Gebiet der römischen Archäologie. Themen und Fragestellungen werden dabei von verschiedenen Seiten beleuchtet und in einen breiteren kulturhistorischen Zusammenhang gestellt und in Form von selbständigen Arbeiten (Referaten und schriftlichen Arbeiten) sowie gemeinsamen Diskussionen erschlossen. Die Studierenden erwerben so grundlegende Fach- und Medienkompetenz zur Bearbeitung und Vermittlung eines wissenschaftlichen Themengebietes.

ECTS: 6

Learning Outcome:
Die Studierenden bearbeiten eng umrissene Fragestellungen innerhalb eines grösseren ausgewählten Themas der römischen Archäologie und wenden dabei selbstständige wissenschaftliche Arbeitsmethoden (Quellenrecherche, archäologische Methoden der Fundansprache und Datierung, kritische Verarbeitung der Forschungsliteratur) an. Sie sind in der Lage, ihre Ergebnisse klar und konzis zu referieren sowie eigene Gedanken und Ideen zum Thema zu entwickeln. In einer gemeinsamen Diskussion mit den Mitstudenten stellen sie ihre Ergebnisse in einen grösseren Rahmen. Die Verschriftlichung versetzt die Studierenden in die Lage, kurze wissenschaftliche Texte zu verfassen.

Module Introduction to German Linguistics B
06SM360-102 / Module

Description:

General description:
Das Modul bietet eine Einführung in grundlegende Konzepte der germanistischen synchronen und diachronen Sprachwissenschaft. Entlang verschiedener sprachlicher Beschreibungsebenen werden weiterführende Kenntnisse zur Grundstruktur der deutschen (Gegenwarts-)Sprache und ihrer Varietäten und Nachbarsprachen sowie theoretische, methodische und praktische Kenntnisse zur Analyse sprachlichen Handelns in geschriebener und gesprochener Sprache erworben. Das Modul vermittelt Einsichten in die komplexen Bezüge zwischen Sprache, Interaktion und Gesellschaft. Diese sollen sowohl für die Gegenwartssprache wie auch für die Sprachgeschichte des Deutschen vom Spätmittelalter bis in die heutige Zeit beleuchtet werden. Hierzu werden wichtige Fragestellungen und Konzepte der neueren Sprachgeschichte des Deutschen sowie ein inhaltlicher Überblick über die Sprachgebrauchsverhältnisse der behandelten Zeitabschnitte vermittelt. Teil des Workloads sind modulbegleitende Hausaufgaben, das Verfassen eines Essays und die Teilnahme an der kursübergreifenden Schlussveranstaltung.
