Module Perspectives on Literary History
06SM360-111 / Module

Description:

General description:
Das Modul, bestehend aus einer Vorlesung, einem Seminar und einer Selbststudieneinheit, vermittelt einen literaturgeschichtlichen und hermeneutischen Zugang, der literarische Texte ebenso in ihrer Singularität und ihrem literarischen Formwissen betrachtet, wie er sie auch in die politischen und (sozial)historischen Kontexte sowie in Beziehung zu anderen Medien stellt. Die Vorlesung behandelt in breit gefächerter Perspektive bestimmte Epochen, Autoren(gruppen) oder Gattungen und ordnet sie literaturhistorisch ein, während das Seminar, entweder in Längs- oder Querschnitten angelegt, eine thematische Vertiefung vornimmt. Vorlesung, Seminar und Selbststudieneinheit unterstützen die Studierenden dabei, sich eigene Themen- und Lektüreschwerpunkte herauszubilden und daraus eigene historische, gattungsinformierte und medial reflektierte Forschungsansätze abzuleiten. Teil des Workloads sind ein oder mehrere Inputs mit Handout.

ECTS: 9

Notes:
Die Vorlesung findet präsentisch statt. Eine Aufzeichnung steht in der darauffolgenden Woche über Switchdrive/ Olat zur Verfügung. Die Begleitseminare finden präsentisch statt. Studierende, denen eine präsentische Teilnahme am Begleitseminar nicht möglich ist, können einen Antrag an die Modulverantwortliche stellen auf virtuelle Teilnahme. Diese ist möglich im Begleitseminar 3 (Schneider, Mi
14.00-15:45).

Learning Outcome:
Die Studierenden gewinnen einen Überblick über Epochen, Gattungen, Autorinnen und Autoren der neueren deutschen Literatur und lernen sie im wechselseitigen Zusammenhang sowie in den jeweiligen historischen und medialen Kontexten zu reflektieren. Sie erwerben die Kompetenz, die historischen Signaturen von Einzeltexten zu erkennen und einzuordnen. Sie können verschiedene literaturgeschichtliche Epochen mit ihren zentralen Autorinnen und Autoren unterscheiden und werden für Übergänge und Transformationen ebenso wie für den Konzeptcharakter von Periodisierungen sensibilisiert. Durch die methodisch reflektierte Erarbeitung eines historisch und gattungsmässig diversifizierten Korpus an Texten von
1700 bis in die Gegenwart lernen sie die Veränderungen literarischer Formen über einen längeren Zeitraum hinweg zu beschreiben.

Module Medieval and Early Modern German Literature - Basics and Methods
06SM360-109 / Module

Description:

General description:
Das Modul dient, ausgehend von der Arbeit an einem mittelhochdeutschen Text oder einem Textcorpus, der Vermittlung der Fähigkeit, sich eigenständig, methodisch reflektiert und unter Nutzung der einschlägigen Hilfsmittel mit einem mittelalterlichen Text auseinandersetzen zu können. Die philologischen Arbeitstechniken (Recherche, Auseinandersetzung mit der Forschung, Thesenbildung) werden eingeübt.

ECTS: 6

Learning Outcome:
Die Studierenden kennen die Herausforderungen, die sich aus den mittelalterlichen Überlieferungssituationen ergeben (Handschriftenkunde; 'mouvance'; Editionsphilologie). Die daraus resultierenden Konsequenzen für literaturwissenschaftliche Kernkonzepte (v. a. Literatur-, Text-, Autorbegriff) können sie fallbezogen differenzieren und Fachterminologie sicher anwenden; dies schliesst, ausgehend von Grundfragen von Hermeneutik und Interpretation, die Auseinandersetzung mit historischer Narratologie, Formanalyse und Semantik ein. Die Studierenden können die historischen Voraussetzungen der Textproduktion und -rezeption (Rhetorik/Allegorese/Exegese; Gesellschaftsstruktur) in ihre Deutungspraxis integrieren und die mittelhochdeutschen Texte mit Blick auf die ihnen vorausgehenden und sie umgebenden vernakulären und lateinischen Traditionen in ihrer Spezifik beschreiben.

Module Medieval and Early Modern German Literature - Readings and Interpretations A
06SM360-110 / Module

Description:

General description:
Das Modul besteht aus einem Seminar, das mit einer schriftlichen Arbeit abgeschlossen wird, und einer Selbststudieneinheit mit einer mündlichen Prüfung. Im Seminar werden anhand eines historisch-systematischen Themas aus dem Bereich der deutschen Literatur von den Anfängen bis um 1700 und in Auseinandersetzung mit der Forschungsliteratur eigene Fragestellungen und Thesen entwickelt; durch die Lektüre selbstgewählter Texte aus einem umfangreichen Corpus (Leseliste) werden die literarhistorischen Kenntnisse vertieft, die schliesslich mündlich abgeprüft werden.

ECTS: 9

Learning Outcome:
Ausgehend von den Primärtexten und in Auseinandersetzung mit der vorliegenden Forschung können die Studierenden eigenständige Fragestellungen und Thesen entwickeln, die sie in methodisch reflektierten Argumentationen begründen. Sie verfügen über die hierfür notwendigen Recherchekenntnisse und wissen um die Konventionen des Fachs. Mit Erschliessungsinstrumenten und Hilfsmitteln (Bibliographien, Rezensionen, Forschungsberichte; Handbücher, Lexika) können sie umgehen. Sie können sich über die Seminarlektüre hinaus eigenständig Zugänge zu Texten der deutschen Literatur von den Anfängen bis um 1700 erarbeiten und sind über Form, Inhalt, Aufbau und Struktur einzelner Werke orientiert. Zudem verfügen sie über ein solides literarhistorisches Grundwissen, das die Kenntnis wichtiger Stoff- und Gattungstraditionen einschliesst.

Module Literature in Switzerland
06SM360-113 / Module

Description:

General description:
Das Modul bietet eine differenzierte Auseinandersetzung mit dem literarischen Feld 'Schweiz' und macht es als Diskursraum mit expliziten und impliziten Voraussetzungen, Geltungen und Wirkungen verstehbar. Literarische Texte und Institutionen der Literatur werden auf ihre Situierung in diesem multidimensionalen und mehrsprachigen Diskursraum hin und in ihrer komplexen Verwobenheit mit anderen Kulturräumen analysiert. Die Parameter der Analyse umfassen
u.a. sprachliche, regionale, nationale, identitätspolitische, historische, imaginäre Zuschreibungen und Grenzziehungen. Themenfelder einer vertieften Analyse sind: historische wie zeitgenössische 'Schweizer' Texte und Institutionen, regionale wie supranationale Literaturen und reale Schweizer Orte ebenso wie die imaginierte Schweiz. Die thematische Auseinandersetzung erfolgt nach Möglichkeit unter Einbezug literarischer Praxisfelder

ECTS: 9

Learning Outcome:
Die Studierenden verstehen 'Schweiz' und 'das Schweizerische' als Diskurs- und Reflexionsraum und können literarische Ausdrucksformen und Institutionen dazu in Beziehung setzen. Sie kennen zentrale Kategorien, die für die Analyse des Literaturfeldes Schweiz im Kontext der neueren deutschen Literatur relevant sind, können diese kritisch reflektieren, in ihre jeweiligen sozialhistorischen Kontexte einordnen und für konkrete Text- und Kontextanalysen anwenden. Ausgehend von einem Ausschnitt aus der Literaturgeschichte und/oder der literarischen Gegenwart des Literaturfeldes Schweiz verfügen sie über vertiefte Kenntnisse, die sie sich allenfalls auch im Rahmen einer praktischen Übung angeeignet haben. Auf einer grundsätzlicheren Ebene geht es darum, Zuschreibungen bewusst zu machen, kritisch zu reflektieren und informiert anzuwenden.

Module Introduction to the History of the Germanic Languages 1
06SM360-301 / Module

Description:

General description:
Das Modul führt in die mittelalterlichen germanischen Sprachstufen und ihre Vorgeschichte ein. Dargestellt werden die schriftlichen Überlieferungsformen und die Entwicklung charakteristischer sprachlicher Merkmale (mit Schwerpunkten in der Phonologie und Morphologie). Zur Sprache kommen darüber hinaus Aspekte der "äusseren" Sprachgeschichte, also zeit- und kulturgeschichtliche Kontexte sowie deren sprachlicher Niederschlag beispielsweise im Lexikon oder in der Schriftlichkeit. Da es sich bei den behandelten Sprachstufen zum Teil um Rekonstruktsprachen und Trümmersprachen handelt, werden auch methodische Fragen wie die Prinzipien der Rekonstruktion oder der Umgang mit frühgeschichtlichen Quellen und Überlieferungsformen thematisiert.

ECTS: 6

Learning Outcome:
Die Studierenden gewinnen einen Überblick über die Überlieferung und Struktur der frühen germanischen Sprachstufen und erwerben Kenntnisse zu den wichtigsten diachronen Prozessen, die zur Herausbildung und Profilierung der Einzelsprachen führen. Sie haben darüber hinaus Einblicke in die Methoden und Ergebnisse der sprachvergleichenden Rekonstruktion und des Sprachvergleichs im Allgemeinen.

Module Rhetoric - Poetics - Performance
06SM360-515 / Module

Description:

General description:
Literatur als kritischer Performativ: Die Systematiken von Rhetorik und Poetik werden mit Blick auf grundlegende Funktionen von Literarizität in historischer wie in systematischer und in einzeltextueller Hinsicht studiert. Sowohl Rhetorik wie Poetik befassen sich, konstitutiv, mit Übertragungen, mit der Performativität sprachlicher Zeichensetzung: Übertragen werden dabei die entscheidenden Funktionen des Bedeutens auf besondere Zeichen und Zeichenkonstellationen (auf Tropen und Figuren, auf Sinnesfiktionen, auf Zitations- und auf Sprechakte), die diese Darstellungsfunktionen qua Äquivalenz und Kontiguität dadurch wahrnehmen, dass sie deren Rückübertragbarkeit im Vollzug der Möglichkeit ihres Gelesenwerdens verbürgen. Das Modul geht, sowohl generalistisch, überblicksorientiert, wie exemplarisch, an konkreten literarischen Fallbeispielen, den grundlegenden Fragen einer literarisch-epistemologischen Dimension nach: Was vermögen unterschiedliche literarische Texte 'über sich' zu sagen?

ECTS: 15

Learning Outcome:
Das Ziel liegt in der Vermittlung grundlegender Korrespondenzen der Systematiken von Rhetorik und Poetik, sowie deren Übertragung in Konzeptionen literarischer Performanz. Es geht dabei um die generalistische wie die exemplarische Erschliessung des Erkenntnisfeldes, innerhalb dessen die Beschreibungsmodelle der modernen Texttheorien, der historischen und modernen Poetiken sowie der klassischen Rhetorik im Bereich der Textualität in konstitutiver Funktion korrelieren. Es werden dabei, mit dem Ziel der eigenständigen literaturwissenschaftlichen Theoriebildung und der Entwicklung lektüreanalytischer Verfahrensweisen, Erkenntnisse gewonnen hinsichtlich der grundlegenden Frage, wie wir mit Rhetorizität ein literaturwissenschaftliches Paradigma für die differenzierende Analyse literarischer Verfahren zur Hand haben. Die Arbeitsform ist das Seminar/Kolloquium: Wortbeiträge und zwei Diskussionsleitungen/Inputs mit schriftlichem Handout entwickeln dabei die persönliche Wissenschaftskompetenz.

Module Literature and Aesthetics
06SM360-517 / Module

Description:

General description:
Literatur ist eine Kunstform. Deshalb setzt die Analyse literarischer Texte nicht nur ein Verständnis der Inhalte sowie der historischen bzw. kulturellen Kontexte voraus, sondern vor allem ein Wissen über literarische Formen. Den Rahmen für die Analyse der Form bildet die allgemeine Ästhetik, die den literarischen Text als Medium erfasst und theoretisch reflektiert. Erweitert wird er durch ein breites Spektrum rezenter Theorien der Form. Gegenstand des Moduls ist zum einen der historische Wandel der Formen (z.B. Tragödie, Komödie, Roman, Novelle, Sonett) und ihrer Reflexionen, zum anderen die Vielfalt von Formen, die ein Thema haben kann (z.B. Masochismus, Negativität, Opfer, Überwachung). Der Fokus liegt darüber hinaus auf den ästhetischen Repräsentationsformen von Figuren, Figurationen und Konstellationen in literarischen Texten aus verschiedenen theoretischen Perspektiven, insbesondere der Gender- und Queer Studies. Teil des Workloads sind ein oder mehrere Inputs mit Handout.

ECTS: 15

Learning Outcome:
In diesem Modul werden die Studierenden in die Theorie literarischer Formen eingeführt; Grundlage bilden Erzähltheorie, Dramentheorie und Lyriktheorie.
Neben einem exemplarischen Überblick über die Bereiche Ästhetik, Mediologie, Formsemantik, Gattungstheorie oder Fiktionstheorie lernen sie, diese Theorien miteinander zu verknüpfen, zu bewerten und für jeweils spezifische Fragestellungen zu operationalisieren. Dazu gehören Literaturtheorien aus den Bereichen Hermeneutik, Strukturalismus, Poststrukturalismus oder Literaturtheorien, die interdisziplinäre Schnittstellen u.a. mit Philosophie, Politikwissenschaft, Soziologie und Psychoanalyse bilden. Insbesondere sollen auch Gender- und Queer-Theorien vertieft und analytisch fruchtbar gemacht werden. Ziel ist die schriftliche Ausarbeitung eigener Forschungsansätze zu historisch spezifischen Themen.

Module Constellations of Literary History
06SM360-519 / Module

Description:

General description:
Literarische Texte stellen sich dem hermeneutischen Zugang als historisch vermittelte Aussageformen dar. Dabei hängt die Bewertung ihrer geschichtlichen Zuordnung von der Auswahl relevanter Kontexte ab: Politische und gesellschaftliche Konstellationen, Beziehung zu anderen Künsten und Medien, Wissens-, Ideen- oder Mentalitätsgeschichte. Zudem sind Periodisierungen und Epocheneinteilungen stets Konzepte ex post, die von theoretischen Vorannahmen unterschiedlicher Leitdisziplinen geprägt werden. Das Modul vermittelt eine vertiefte methodische und theoretische Auseinandersetzung mit diesem Konzeptcharakter literaturgeschichtlicher Betrachtung. Damit können literarische Texte, Gattungen, Formprinzipien und literarische Mittel auf ihre historischen Indikatoren und Signaturen hin befragt und in ihren Konstellationen mit anderen Teilsystemen, Künste und Ideen ihrer Zeit analysiert werden. Teil des Workloads sind ein oder mehrere Inputs mit Handout.

ECTS: 15

Learning Outcome:
Ziel des Moduls ist die Vertiefung, Anwendung und Reflexion des im Ba erworbenen literaturgeschichtlichen Wissens. Die Studierenden können selbständig literarische Texte im Hinblick auf ihre historischen Signaturen analysieren, ihre historische Fremdheit als hermeneutische Herausforderung fruchtbar machen und die literaturgeschichtliche Betrachtung von Texten in steter wechselseitiger Überprüfung zwischen Einzeltext und Epochenkonstruktion methodisch und theoretisch reflektieren. Sie entwickeln ein Verständnis dafür, die historische Bedingtheit der Literatur aus ihren kontextuellen Bezügen und Wechselwirkungen mit den gesellschaftlichen, politischen, künstlerischen, (inter)medialen, kulturellen und wissensgeschichtlichen Teilsystemen ihrer Zeit heraus zu entwickeln. Sie erkennen den Zusammenhang zwischen theoretischen Vorannahmen und literarhistorischen Periodisierungen.

Module Literary Criticism
06SM360-532 / Module

Description:

General description:
Das Modul erprobt neue Formen des Kulturjournalismus in Verbindung mit der universitären Lehre. Die Studierenden erhalten Einblick in das Berufsfeld der Literaturvermittlung und produzieren publikationsreife Beiträge zur zeitgenössischen Schweizer Literatur. Eingebunden sind sie dabei in ein redaktionelles, Workflow-basiertes Umfeld, das über eine Online-Plattform organisiert und durch regelmässige Redaktionstreffen ergänzt wird. Das Modul legt dabei Wert auf die Wahrung eines literaturwissenschaftlichen Reflexionsniveaus in der öffentlichen Diskussion von Literatur. Direkte Rückmeldung erhalten die Studierenden von namhaften Peers aus dem Schweizer Kulturjournalismus. Über Workshops und Praktika wird die konstante und weiterqualifizierende Vernetzung mit dem Literaturbetrieb gewährleistet. Die Absolventinnen und Absolventen des Moduls verfügen nach dessen Abschluss sowohl über relevante Kontakte zum Schweizer Kulturbetrieb als auch über öffentlich zugängliche Arbeitsproben.

ECTS: 15

Learning Outcome:
Das Modul vermittelt intensive, praxisbezogene Einblicke in das Berufsfeld der Literaturvermittlung in öffentlichen Räumen vom Literaturfestival über das Feuilleton bis zum Blog. Die Studierenden erlernen und erproben verschiedene Formen der kritischen Auseinandersetzung mit Literatur: Von der klassischen Rezension über den Podcast bis hin zu Veranstaltungs- und Hintergrundberichten oder Interviews verfassen und veröffentlichen sie im Seminar unter Anleitung publikationsreife Beiträge für verschiedene Zielmedien. In der engen Anbindung an den Schweizer Literaturbetrieb werden sie einerseits mit dessen berufspraktischen Mechanismen und Diskursregeln vertraut gemacht, um diese andererseits unter Rückgriff auf ihre literatur- und kulturtheoretische Vorbildung reflektieren und ihr eigenes Schaffen einordnen zu können. Die Textproduktion für unterschiedliche Publikumsmedien geht mit einem differenzierten Verständnis des Literaturbetriebs und seiner Strukturen einher.

Module Latin Prose Composition II
06SM323-003 / Module

Description:

General description:
In den beiden Teilen der Sprachübungen werden die aus der Schule oder aus dem Latinum vorhandenen Kenntnisse in Grammatik, Stilistik, Semantik und Wortschatz aufgefrischt und wissenschaftlich vertieft. Zu diesem Zweck wird die massgebliche Grammatik (Rubenbauer/Hofmann) in zwei Semestern systematisch durchgearbeitet; ausserdem werden Formenkenntnisse und Wortschatz (Vischer) gefestigt und ausgebaut. Der Fokus liegt auf dem Erwerb einer aktiven Sprachbeherrschung, die anhand der Übersetzung von Einzelsätzen und kurzen Texten aus dem Deutschen ins Lateinische eingeübt wird. In Sprachübungen II werden insbesondere Modi, Consecutio temporum, Nebensätze und Partizip behandelt. Das Modul Sprachübungen I wird nicht zwingend vorausgesetzt, aber aus inhaltlichen Gründen wird empfohlen, mit Sprachübungen I zu beginnen. Die Lateinischen Stilübungen setzen die Sprachübungen auf einem höheren Niveau fort.

ECTS: 6

Notes:
Mit Vorteil werden die Wörter aus dem "Vischer" von Sprachübungen I repetiert und die Wörter ab Buchstabe M gelernt.

Learning Outcome:
Fortsetzung von Sprachübungen I, mit neuem thematischem Schwerpunkt Modi, Consecutio temporum, Nebensätze und Partizip.

Module Latin Translation Skills
06SM323-008 / Module

Description:

General description:
In der schriftlichen Prüfung zu diesem Modul ist ein vorher nicht gelesener Originaltext von mittlerer Schwierigkeit in korrektes Deutsch (oder eine andere Landessprache) zu übersetzen. Die Übersetzung muss ohne Zuhilfenahme des Originals verständlich sein und erkennen lassen, dass sowohl der Gedankengang des Textes als auch seine Konstruktionen verstanden wurden. Vorausgesetzt werden erstens die Grammatik von Rubenbauer/Hofmann und der Wortschatz von Vischer. Zweitens ist die Übersetzungskompetenz durch eine intensive Lektüre von Primärtexten zu erwerben. Bei der Auswahl können individuelle Interessen berücksichtigt werden, wobei die Wegleitung Empfehlungen zu den Texten sowie Richtlinien zum Umfang enthält. Für die Interpretationsfragen in der schriftlichen und in der mündlichen Prüfung werden drittens die bereits absolvierten Module sowie das Studium einer Literaturgeschichte vorausgesetzt. Im Akzess werden die nötigen Kenntnisse für den Besuch von Seminar-Modulen erworben.

ECTS: 6

Learning Outcome:
Fähigkeit des stilsicheren Übersetzens eines mittelschweren lateinischen Originaltextes auf der Basis ausgedehnter Lektüreerfahrung (Primärtexte); Kenntnis der wichtigsten Gattungen und Epochen; Fähigkeit, einen Text vernetzt mit den bisher im Studium belegten Modulen zu übersetzen und zu erklären, und zu einer kleinen wisschenschaftlichen Diskussion über ausgewählte Texte der Leseliste.

Module From François Rabelais to Maryse Condé: Reading the World through Literature
06SM390-003 / Module

Description:

General description:
Ce module est constitué d'un séminaire (Se) accompagné de travaux dirigés (Ue), deux composantes qui se complètent mutuellement et qui ont lieu pendant le même semestre. Le séminaire, dirigé en principe par un professeur, est consacré à un genre, un auteur ou un thème de la littérature française ou francophone modernes ou contemporaines ; dans le cadre des travaux dirigés (Ue), assurés généralement par une lectrice ou un lecteur, les étudiantes et les étudiants approfondissent par des lectures et exercices personnels certains aspects développés dans le séminaire. Le deuxième semestre pourra être consacré, au besoin, à la rédaction du travail écrit, à rendre au plus tard à la fin du module.

ECTS: 6

Learning Outcome:
Les étudiantes et les étudiants approfondiront leurs compétences théoriques et méthodologiques et élargiront leurs connaissances de l'histoire de la littérature. À partir du travail mené en classe sur un corpus spécifique de textes, ils et elles sauront conduire des analyses littéraires cohérentes en mettant à profit les outils adaptés. Celles-ci seront présentées à l'oral comme à l'écrit, et témoigneront de la maîtrise des règles générales de l'argumentation scientifique.

Notes:
MUY IMPORTANTE: Es fundamental entrar en contacto con la lectora (mruiz@rom.uzh.ch) una o dos semanas antes del comienzo de las clases para determinar el nivel de lengua. Quien posea un DELE C1 o haya cursado la educación secundaria en español en un país hispanohablante deberá comunicárselo al coordinador de estudios.

Learning Outcome:
En este curso pretendemos que los participantes consigan un nivel de lengua que defina su competencia comunicativa como se indica a continuación: "[El estudiante C1] es capaz de comprender una amplia variedad de textos extensos y con cierto nivel de exigencia, así como reconocer en ellos sentidos implícitos. Sabe expresarse de forma fluida y espontánea sin muestras muy evidentes de esfuerzo para encontrar la expresión adecuada. Puede hacer un uso flexible y efectivo del idioma para fines sociales, académicos y profesionales. Module Catalan Language (A2-B1)
06SM427-018 / Module

Description:

General description:
Els cursos estan basats en una metodologia comunicativa que treballa totes les destreses, des de la comprensió i expressió orals i escrites fins la mediació. Totes les unitats didàctiques estan organitzades al voltant d'un objectiu comunicatiu concret i les activitats estan pensades perquè els estudiants arribin a aconseguir aquest objectiu. D'aquesta manera els estudiants podran practicar les competències que els permetran desenvolupar-se en situacions comunicatives reals en llengua catalana. En acabar cada unitat didàctica, els estudiants podran reflexionar sobre el seu propi progrés i reforçar els coneixements adquirits a classe amb activitats d'ampliació a casa. La participació activa a classe i el treball individual a casa serà essencial per adquirir les competències comunicatives del nivell corresponent al curs.

ECTS: 3

Learning Outcome:
Aquest curs pretén que adquireixis un nivell B1 de domini de la llengua catalana (segons el Marc Europeu Comú per a les Llengües). L'estudiant de B1 és capaç de: Comprendre les idees principals d'una conversa normal sobre temes relatius a la feina, a l'escola, a l'oci, etc. Comprendre la informació principal de textos clars i estàndards sobre temes que es pot trobar regularment a la feina, als estudis, durant el temps lliure, etc. Fer front a la majoria de les situacions lingüístiques que poden aparèixer quan es viatja en una zona on es parla la llengua, tant oralment com per escrit. Pot produir un discurs senzill i coherent sobre temes que li són familiars o d'interès, així com expressar les seves opinions i projectes breument.

Module Introduction to Synchronic Linguistics
06SM410-003 / Module

Description:

General description:
L'unità didattica si propone di introdurre i/le discenti alla linguistica sincronica italiana, tramite la presentazione delle nozioni di base dei diversi livelli di analisi: fonologia, morfologia, sintassi e semantica. Tale presentazione avviene progressivamente partendo dalla fonologia, per concludere il percorso con l'analisi semantica. Si introducono così i principali strumenti per l'analisi sincronica che potranno essere applicati dagli studenti e dalle studentesse ad ogni oggetto linguistico. Ai vari livelli di analisi ci si accosta col supporto di materiali distribuiti a lezione, utili alla comprensione della materia trattata (fogli di accompagnamento ed esercizi). Parallelamente alla frequenza del corso gli studenti potranno seguire un tutorato per ridiscutere i temi trattati a lezione.
L'apprendimento delle strutture dell'italiano contemporaneo costituisce un presupposto per il prosieguo degli studi di italiano (in particolare nei seminari di linguistica).

ECTS: 3

Learning Outcome:
Gli studenti e le studentesse acquisiscono le nozioni basilari per l'analisi linguistica sincronica dell'italiano. L'assimilazione ditali nozioni dota il/la discente di una comprensione di base della lingua come sistema e dei suoi vari livelli.

Module Advanced Methods and Research Tools in Linguistics
06SM410-005 / Module

Description:

General description:
Durante il primo semestre (quello primaverile) si approfondiscono le nozioni di linguistica sincronica e diacronica, storia della lingua e geografia linguistica italiana, l/le discenti le applicano integrando quanto appreso sui diversi livelli di analisi entro procedure analitiche unitarie, atte a esaminare i fenomeni linguistici (e i loro riflessi nei testi), in sincronia e diacronia. Oggetto di esercitazione sono fenomeni esemplificati con testi e con materiali linguistici a sé stanti (sistemi fonologici, paradigmi morfologici, strutture sintattiche). L'applicazione delle nozioni apprese comporta lavoro autonomo (soluzione di esercizi, pratica di reperimento di strumenti bibliografici, lettura della bibliografia), i cui risultati sono verificati all'esame finale (che si terrà all'inizio del semestreautunnale) per il quale i/ le partecipanti prepareranno una lista di letture di linguistica e sceglieranno all'inizio del modulo un testo antico e/o dialettale di
800 sillabe.

ECTS: 9

Learning Outcome:
Gli studenti e le studentesse approfondiscono le nozioni per l'analisi sincronica e diacronica dell'italiano e delle varietà italoromanze.
L'assimilazione e la messa in pratica di tali nozioni conduce il/la discente alla comprensione delle strutture dell'italiano odierno e delle sue varietà dialettali, alla comprensione della storia e dell'origine di tali strutture ed all'applicazione consapevole in taleambito empirico - in relazione a strutture linguistiche e/o a testi - degli strumenti dell'analisi linguistica.

Module Italian Language (C1)
06SM410-011 / Module

Description:

General description:
In questo corso le studentesse e gli studenti raggiungeranno, attraverso una metodologia variata, il livello di competenza linguistica di padronanza C1. Si analizzeranno le strutture sintattiche complesse, basate sulla concordanza dei tempi e dei modi verbali (subordinate ipotetiche, concessive, interrogative indirette, comparative, ecc.) e si rifletterà sugli errori ricorrenti delle studentesse e degli studenti di livello avanzato. Fra i materiali didattici, si privilegeranno testi di tipo narrativo (brani di romanzi e racconti) e argomentativo (discussioni su argomenti letterari, ma anche politici, economici e sociali). Le studentesse e gli studenti svolgeranno esercizi in autonomia per ampliare il lessico e per perfezionare la propria pronuncia, e acquisiranno una maggiore scioltezza nella comunicazione scritta e orale in italiano.

ECTS: 3

Learning Outcome:
Le studentesse e gli studenti alloglotti acquisiranno le competenze comunicative corrispondenti al livello C1 descritte dal Quadro comune europeo di riferimento per la conoscenza delle lingue: "l'apprendente comprende un'ampia gamma di testi complessi e lunghi e ne sa riconoscere il significato implicito; si esprime con scioltezza e naturalezza; usa la lingua in modo flessibile ed efficace per scopi sociali, professionali e accademici; riesce a produrre testi chiari, ben costruiti, dettagliati su argomenti complessi, mostrando un controllo sicuro della struttura testuale, dei connettori e degli elementi di coesione".

Module Medieval and Renaissance Literature: Texts and Instruments
06SM410-013 / Module

Description:

General description:
Il seminario consolida e approfondisce le conoscenze acquisite nella prima fase degli studi e offre un percorso monografico su aspetti salienti della letteratura dalle Origini al Cinquecento, con particolare attenzione alle dinamiche intertestuali e interdiscorsive.
Dopo alcune sedute introduttive, gli studenti e le studentesse entreranno in diretto contatto con i testi, partecipando attivamente alla discussione e intervenendo con riflessioni personali e spunti di analisi maturati attraverso uno studio autonomo e un approfondimento bibliografico delle questioni di volta in volta trattate. I risultati confluiranno in una presentazione orale e in un elaborato scritto.

ECTS: 6

Learning Outcome:
Lo scopo del corso è incoraggiare il confronto critico con i testi, gli autori, il contesto storico-culturale e la letteratura secondaria di riferimento, affinché i/le frequentanti sviluppino competenze e capacità autonome di analisi critica. Fondamentale il confronto con i contributi bibliografici, attraverso il quale gli studenti e le studentesse impareranno a riconoscere le questioni teoriche e metodologiche più attuali del dibattito critico, al fine di collocarvi il proprio contributo.

Module Empirical Foundations and Methods
06SM430-001 / Module

Description:

General description:
Das Konzept der "Romanischen Sprachen" ist, obschon es heute zum Allgemeinwissen gehört, das Forschungsresultat einer relativ jungen wissenschaftlichen Disziplin, nämlich der historisch-vergleichenden Sprachwissenschaft. In diesem Seminar gehen wir der Frage nach, in welchem geschichtlichen Kontext die Romanistik entstanden ist, und warum die Gemeinsamkeiten der romanischen Sprachen im deutschsprachigen Raum traditionell besonders wahrgenommen werden. Wir lernen die verschiedenen Sprachen der Romania genauer kennen - auch die kleinen und kleinsten, einschliesslich ihrer Ausprägungen ausserhalb der europäischen Stammlande. Dabei gehen wir der Frage auf den Grund, welche gemeinsamen Eigenschaften einen möglichen romanischen Sprachtypus ausmachen - und anhand welcher Unterschiede sich die Romania untergliedern lässt.

ECTS: 3

Learning Outcome:
Einblick in die methodischen Grundlagen der historisch-vergleichenden Sprachwissenschaft, Einführung in die Fachgeschichte der Romanistik, Überblick über die Sprachen und Varietäten der gesamten Romania und ihrer Gliederung.

Languages of Instruction:
Deutsch

Module Spanish Language (A2-B1)
06SM430-011 / Module

Description:

General description:
Los contenidos de este curso enlazan con los del módulo Lengua Española (A1-A2). Emplearemos una metodología ecléctica basada en la concepción de la lengua como instrumento de comunicación. Trabajaremos las destrezas tanto productivas como receptivas desde una perspectiva pragmática para que los alumnos empiecen a desenvolverse como usuarios independientes en situaciones cotidianas (p. ej. en un viaje) en el mundo de habla hispana. El número de participantes se limitará a 16. MUY IMPORTANTE: Quien posea un DELE B1 deberá comunicárselo al coordinador de estudios.

ECTS: 3

Notes:
¡Atención! Se trata de un "Bewerbungsmodul" con acceso limitado y con plazo de inscripción especial. Véanse los detalles bajo "Voraussetzungen".

Learning Outcome:
En este curso pretendemos aproximar el nivel de lengua de los participantes a una competencia comunicativa que se defina como se indica a continuación: "[El estudiante B1] es capaz de comprender los puntos principales de textos claros y en lengua estándar si tratan sobre cuestiones que le son conocidas, ya sea en situaciones de trabajo, de estudio o de ocio. Sabe desenvolverse en la mayor parte de las situaciones que pueden surgir durante un viaje por zonas donde se utiliza la lengua. Es capaz de producir textos sencillos y coherentes sobre temas que le son familiares o en los que tiene un interés personal. Puede describir experiencias, acontecimientos, deseos y aspiraciones, así como justificar brevemente sus opiniones o explicar sus planes", MCER (p. 26).

Languages of Instruction:
Spanisch/Deutsch

Merkmale:

Responsible instructor: Johannes Kabatek

Requirements:

Prerequisites: Es indispensable demostrar que se cumplen los requisitos de acceso (nivel A2). Para ello, disponemos de tres posibilidades: 1. En caso de haberse obtenido el DELE A2, subir una copia del diploma. 2. Si ya se ha aprobado el módulo Lengua Española (A1-A2), indicárselo a la docente (mcmunoz@rom.uzh.ch). 3. Si no se da ninguno de los casos anteriores, entrar en contacto con la lectora con la mayor celeridad posible (mcmunoz@rom.uzh.ch). Se recuerda que el número de plazas disponibles es limitado. Por lo tanto, es importante ser consciente de que este módulo está diseñado para estudiantes de lenguas románicas, lo que significa que tanto el grado de exigencia como el ritmo de trabajo son muy elevados. Por ello, se pide a quienes no dispongan de los recursos temporales (unas 6 horas semanales, incluyendo las clases) que reconsideren su decisión, para que quienes estén dispuestos a invertir este tiempo posean más posibilidades de conseguir una plaza.

Assessment: Examen escrito

Examen escrito (on-site, paper pencil): semana 13 (22/5/26), durante el horario del curso.

Module Linguistic Change/Variation
06SM390-502 / Module

Description:

General description:
Le module thématise la variabilité inhérente à la langue (française) du point de vue descriptif et explicatif. Il confronte les étudiantes et les étudiants à différents corpus (historiques ou contemporains) et les invite à en extraire des données, discutées ensuite quant à leur pertinence pour la langue (fréquence, régularité), corrélation avec des facteurs externes (région, âge, genre etc.) et internes (phonologiques, morphologiques, syntaxiques etc.) et genèse. Il se focalise sur des phénomènes déviants du standard, mais omniprésents dans le langage quotidien, afin d'enrichir le répertoire linguistique passif et actif des étudiantes et étudiants et leur capacités de réflexion métalinguistique.

ECTS: 9

Learning Outcome:
Les étudiantes et les étudiants arriveront à reconnaître, analyser et problématiser la variabilité de la langue française selon différentes dimensions (temps, espace, société, situation communicative). Ils sauront extraire et analyser des données de corpus authentiques (analyses quantitatives et qualitatives) et décrire et expliquer du moins un phénomène de variation concret (une variable).

Module Investigations in Systemic Linguistics
06SM427-503 / Module

Description:

General description:
Este curso tiene dos fases que se reparten en dos semestres, una primera, de trabajo conjunto y de enseñanza presencial en el grupo, y una segunda, de trabajo individual de elaboración de un tema científico. En la primera parte, el tema se prepara mediante lecturas y ejercicios y se discuten aspectos presentados por los participantes en el pleno. No se trata solo de comprender un tema o un debate actual sino también de saber evaluar los alcances y límites de las aportaciones halladas en la bibliografía actual. El enfoque será de lingüística sincrónica en un sentido amplio y el tema concreto varía de semestre en semestre. La redacción del trabajo de investigación particular servirá como paso previo a la preparación de la Tesis de Maestría.

ECTS: 9

Learning Outcome:
El objetivo de este curso es adquirir la capacidad de elaboración autónoma de un trabajo científico y conocer los requisitos metodológicos, formales y lingüísticos correspondientes. Para ello se adquirirán competencias de lectura crítica y de argumentación de conceptos teóricos sobre la base de conocimientos empíricos.

Module Spanish Language (C2)
06SM427-505 / Module

Description:

General description:
Emplearemos una metodología ecléctica basada en la concepción de la lengua como instrumento de comunicación. Trabajaremos las destrezas tanto productivas como receptivas desde una perspectiva pragmática para que los alumnos sean capaces de desenvolverse con fluidez, eficacia y precisión en el mundo de habla hispana.

ECTS: 6

Notes:
MUY IMPORTANTE: Es fundamental entrar en contacto con la lectora (mruiz@rom.uzh.ch) una o dos semanas antes del comienzo de las clases para determinar el nivel de lengua. Si no se demuestra que se cumplen los requisitos de acceso, la inscripción podrá ser cancelada. Quien posea un DELE C2 o haya cursado la educación secundaria en español en un país hispanohablante deberá comunicárselo al coordinador de estudios.

Learning Outcome:
En este curso pretendemos que los participantes consigan un nivel de lengua que defina su competencia comunicativa como se indica a continuación: "[El estudiante C2] es capaz de comprender con facilidad prácticamente todo lo que oye o lee. Sabe reconstruir la información y los argumentos procedentes de diversas fuentes, ya sean en lengua hablada o escrita, y presentarlos de manera coherente y resumida. Puede expresarse espontáneamente, con gran fluidez y con un grado de precisión que le permite diferenciar pequeños matices de significado incluso en situaciones de mayor complejidad", MCER (p. 26).

Module Research Methods in Anthropology
06SM721-003 / Module

Description:

General description:
Diese Vorlesung mit begleitendem Tutorat gibt einen Überblick über die in der Ethnologie verwendeten Methoden und deren unterschiedliche Anwendungen. Dazu gehört neben der jeweiligen Technik selbst vor allem auch die Reflexion über Nutzen und Schwierigkeiten einzelner Vorgehensweisen sowie über die allgemeine Bedeutung von Methoden im Prozess des wissenschaftlichen Arbeitens. Es geht, mit anderen Worten, darum, was EthnologInnen eigentlich machen, wenn sie forschen, wie sie es machen und warum sie es so oder anders machen.

ECTS: 6

Learning Outcome:
In diesem Modul werden Studierende mit dem Spektrum an Methoden in der Ethnologie bekannt gemacht. Neben den verschiedenen methodischen Vorgehensweisen werden deshalb auch die jeweiligen Anwendungsmöglichkeiten und Probleme - unter anderem ethischer Art - besprochen, die je nach Situation entstehen können. Zudem werden wir uns mit neueren Ansätzen, wie dem der "multi-sited ethnography", sowie mit Fragen der Datenauswertung beschäftigen.

Module History and Theory in Anthropology
06SM721-004 / Module

Description:

General description:
Die Vorlesung gibt einen Überblick darüber, wie die Ethnologie resp.
Sozialanthropologie zu dem geworden ist, was sie heute ist, also über die Herausbildung und Entwicklung als eigenständige wissenschaftliche Disziplin in verschiedenen akademischen Traditionen. Studierende verstehen so einerseits, in welchen Schritten sich ethnologische Theorien herausgebildet haben, und zugleich in welchem "Diskursraum" gegenwärtiges ethnologisches Denken stattfindet. Die Beschäftigung mit der Fachgeschichte stellt damit kein Bearbeiten vergangener und irrelevant gewordener Sachverhalte dar, sondern hilft, gegenwärtiges Forschen auf den Erkenntnissen vergangenen Denkens aufzubauen. In der begleitenden Übung werden grundlegende Texte aus der Fachgeschichte diskutiert.

ECTS: 9

Learning Outcome:
Studierende eignen sich im Rahmen des Moduls Wissen um die wesentlichen Vertreter, theoretischen Strömungen sowie die historische Entstehung und Entwicklung des Faches an.

Module Core field: Political Anthropology
06SM721-103 / Module

Description:

General description:
Die Vorlesung gibt einen Überblick über Themen der politischen Anthropologie. Macht und Recht sind Grundlagen jeder Vergesellschaftung und mit jeweils kulturspezifischen Vorstellungen, Institutionen und Praktiken verbunden, die diese Sphären gestalten. Dabei bezeugt die ethnologische Literatur ein breites Spektrum von Optionen, wie politische Ordnung und Macht erzeugt und angewendet, begrenzt oder bekämpft wird.
U.a. werden diese Themen erörtert: Egalitäre Gesellschaften und elementare Machtprozesse; Religion und Macht; das Verhältnis von Macht und Gewalt; Prozesse der Staatenbildung; Konflikte und ihre Regelung; Krieg; Mobilisierung, Widerstand und soziale Bewegung. An ethnographischen Beispielen wird die Dynamik dieser Prozesse veranschaulicht. Nebst der ethnologischen Perspektive wird auch die spezifisch moderne Gestaltung der politischen und rechtlichen Sphäre thematisiert, um die Dilemmata zeitgenössischer Gesellschaften, insbesondere des globalen Südens, zu verstehen.

ECTS: 3

Learning Outcome:
Ziel der Veranstaltung ist es politische Prozesse auf lokaler, nationaler und globaler Ebene in ihren jeweiligen Kontexten zu verstehen und analysieren. Studierende erhalten einen Überblick über wichtige Themen, Ansätze, Begriffe, Personen sowie zentrale Frage- und Problemstellungen. Damit wird auch das Verständnis und die Motivation zur Auseinandersetzung mit dem Themenfeld sowie zum selbstständigen und eigenverantwortlichen Arbeiten angeregt. Studierende erhalten so Einblicke in studienpraktische, disziplingeschichtliche und wissenschaftstheoretische Themenfelder, die allgemein für das Studium relevant sind.

Module Core field: Anthropology of Religion
06SM721-105 / Module

Description:

General description:
Die Vorlesung gibt einen Überblick über die Religionsethnologie und - theorie sowie angrenzende Forschungsgebiete. Dazu gehören: Was ist Religion? Woher kommt sie? Haben alle Menschen Religion? Was ist der Unterschied zwischen Magie und Religion? Sind viele religiöse Vorstellungen und Praktiken irrational, gibt es verschiedene "Rationalitäten"? Wie werden religiöse Traditionen erforscht? Warum ist es oft so schwierig die Grenzen von Religion(en) zu bestimmen? Wie ist das Verhältnis von Moral, Ethik und Religion? Ist unser ("westliches") Verständnis von Religion auf andere Kulturen übertragbar? Was wären Alternativen? Verliert Religion an Bedeutung? Gibt es auch Forschung zu säkularen Lebensformen? Warum sind viele dieser Fragen problematisch? Zur Diskussion dieser Fragestellungen gehen wir durch die Geschichte der ethnologischen Religionsforschung.
Darüber hinaus werden auch studienpraktische, disziplingeschichtliche und wissenschaftstheoretische Themen angesprochen.

ECTS: 3

Learning Outcome:
Einführung von grundlegenden Studieninhalten der Religionsethnologie und Religionstheorie sowie angrenzender Forschungsgebiete. Überblick über wichtige Themen, Ansätze, Begriffe, Personen sowie zentrale Frage- und Problemstellungen. Motivation zur Auseinandersetzung mit dem Themenfeld. Module Research Module 2: Research Methods and Design
06SM721-561 / Module

Description:

General description:
The course Research Methods and Design will introduce master students to the 'hows and whys' of using qualitative and quantitative researchmethods and prepare them for their upcoming fieldwork. The course covers the entire research process from the initial planning and preparation stages (generating the research problem, thinking about the research's theoretical basis, choosing a methodology, selecting a case, writing a research proposal), to collecting and analyzing data (uses of secondary data, sampling strategies, interviews, participant observation, field notes, surveys, social mapping, visual data; grounded theory, narrative and discourse analysis; transcripts, coding, using computer software), and writing up. We will look into a range of topics like ethical issues; entering, relations in and leaving the field; keeping records and getting feedback. With several assignments throughout the semester, students by the end of the course will be able to submit a research design.

ECTS: 6

Learning Outcome:
1. Students know the 'hows and whys' of using qualitative and quantitative research methods: They know the entire research process from the initial planning and preparation stages to collecting and analyzing data and writing up.
2. Students know important ethical issues involved in doing anthropological research (relations in the field and beyond).
3. Students will be able to submit a research design.
4. Students are prepared for their upcoming fieldwork.

Description:

General description:
Within research- and exhibition projects of the Ethnographic museum, into which students will be directly or indirectly included, this research based module provides in-depth insights into museum research, both in practice and in theory. Participants will be included into museum work and gain insights into current formats of research communication to the public. Such formats may be exhibitions, public events, museum pedagogics, digital tools of media communication, scientific films or photography, and the like. Furthermore, participants will become introduced to museums as a space for theoretical social anthropology reflection and theory production.

ECTS: 6

Notes:
Request for the Booking of Research Modules, Master Social Anthropology: https://t.uzh.ch/1ls

Students, in consultation with a supervising scientist at the museum, plan and conduct an individual research project the results of which will be used for the Master Thesis. Through their work they will become intimately acquainted with theoretical and practical museum work and gain insights into a museum's departments, communication structures, working processes, research facilities and research processes. The research module aims at forming future generations of young museum affine or museum sensitive academics to further explore and develop the potentials of scientific ethnographic collections.
They will equally learn how to communicate research results to the public and how to develop exchange with the public via modern media and a wide range of museum tools.

Description:

General description:
Das Modul beleuchtet eine bestimmte Region oder Stadt unter dem Aspekt einer ortsspezifischen Fragestellung. Im Mittelpunkt stehen die Begegnung mit dem Original und die Auseinandersetzung mit dem lokalen Kunst- und Architekturschaffen. Angestrebt wird eine epochen- und medienübergreifende Perspektive, die sich mit transkulturellen Methoden befasst und den Ort auf möglichst umfassende Weise in seinem (sozial-)historischen wie auch kulturgeschichtlichen Kontext begreift.

ECTS: 9

Notes:
Das Modul kann nicht über das Modulbuchungssystem gebucht werden. Bitte senden Sie Ihre Bewerbung bis zum 1. Februar 2026 als ein pdf-Dokument an Raphaèle Preisinger (raphaele.preisinger@khist.uzh.ch). Diese sollte enthalten: ein Motivationsschreiben (max. 1 Seite), Ihren Lebenslauf, Ihr Studienprogramm (Major und Minor), sowie Ihre Semesterzahl.

Learning Outcome:
Die Studierenden beschäftigen sich mit der Kunst und Architektur einer bestimmten Region oder Stadt und begreifen diese Orte in ihrem (sozial-)historischen und kulturgeschichtlichen Kontext. Sie lernen, in der Begegnung mit dem Original über Werke zu sprechen und ihre Beobachtungen in der Gruppe zur Diskussion zu stellen.

In diesem Kurs werden anhand von adaptierten und später Originaltexten die Grundkenntnisse in Formenlehre, Syntax und Vokabular repetiert, gefestigt und erweitert. Die Lektüre umfasst v.a. Prosatexte (insbesondere Platon). Parallel zum Sprach- und Lektüreunterricht werden wichtige Aspekte der griechischen Kultur vermittelt, auch anhand von Übersetzungen.
Die "Einführung in die homerische Sprache" erfolgt in einem Blockkurs. Die Anforderungen des Kurses entsprechen denen einer Maturitätsprüfung in der Schweiz, die sprachlichen Kenntnisse (in einer für die Alten Sprachen modifizierten Skala) etwa B1/B2.
Buchen Sie das Modul direkt über die Website des Sprachenzentrums (https://www.sprachenzentrum.uzh.ch) und beachten Sie die Anmeldefristen.
Ein definitiv nicht bestandenes Modul "Griechisch II (Graecum)" führt zu einer definitiven Abweisung und Sperre in allen Programmen der PhF, die das definitiv nicht bestandene Modul "Griechisch II (Graecum)" als Pflichtmodul enthalten.

Module Basic Latin
30SM_Lat_Gl / Sprachkurs

Description:

General description:
In diesem Kurs werden anhand eines Lehrmittels die Grundlagen der lateinischen Sprache in Formenlehre, Syntax und Vokabular vermittelt. Im Laufe des Kurses kommt vermehrt die Lektüre einfacher Originaltexte hinzu.
Parallel zum Sprach- und Lektüreunterricht werden wichtige Aspekte der römischen und griechischen Kultur behandelt.
Die sprachlichen Kenntnisse entsprechen (in einer für die Alten Sprachen modifizierten Skala) A2/B1 (gesicherte Lateinkenntnisse).
Das Modul "Grundlagen Latein" kann in zwei Varianten absolviert werden: als 1-semestriger Kurs (fast track), der jedes Herbstsemester angeboten wird, und als 2-semestriger Kurs, mit dem in jedem Semester (HS und FS) begonnen werden kann.
In der zweiten Hälfte des Kurses besteht die Möglichkeit, das Modul unter bestimmten Umständen zu stornieren. Buchen Sie das Modul direkt über die Website des Sprachenzentrums (https://www.sprachenzentrum.uzh.ch) und beachten Sie die Anmeldefristen.
Ein definitiv nicht bestandenes Modul "Grundlagen Latein" führt zu einer definitiven Abweisung und Sperre in allen Programmen der PhF, die das definitiv nicht bestandene Modul "Grundlagen Latein" als Pflichtmodul enthalten.

ECTS: 6

Learning Outcome:

Sie sind in der Lage, einfache lateinische Texte zu verstehen und zu übersetzen.
Sie können Hilfsmittel (Grammatiken, Wörterbücher und zweisprachige Textausgaben) nutzen.
Die Studierenden kennen wichtige Elemente der römischen (und griechischen) Kultur (z.B. Module Latin II (Latinum)
30SM_Lat_II / Sprachkurs

Description:

General description:
In diesem Kurs werden anhand von lateinischen Originaltexten die Grundkenntnisse in Formenlehre, Syntax und Vokabular repetiert, gefestigt und erweitert. Die Lektüre umfasst Texte aus Prosa und Dichtung.
Parallel zum Sprach- und Lektüreunterricht werden wichtige Aspekte der römischen und griechischen Kultur vermittelt, auch anhand von Übersetzungen.
Die Anforderungen des Kurses entsprechen denen einer Maturitätsprüfung in der Schweiz, die sprachlichen Kenntnisse (in einer für die Alten Sprachen modifizierten Skala) etwa B1/B2.
Buchen Sie das Modul direkt über die Website des Sprachenzentrums (https://www.sprachenzentrum.uzh.ch) und beachten Sie die Anmeldefristen.
Ein definitiv nicht bestandenes Modul "Latein II (Latinum)" führt zu einer definitiven Abweisung und Sperre in allen Programmen der PhF, die das definitiv nicht bestandene Modul "Latein II (Latinum)" als Pflichtmodul enthalten.

ECTS: 6

Learning Outcome:
Die Studierenden erweitern ihre Grundkenntnisse der klassischen lateinischen Sprache in Wortschatz, Wortbildung und der lat. Grammatik (Formenlehre, Syntax).
Sie sind in der Lage, anspruchsvollere lateinische Texte zu verstehen und zu übersetzen und stilistisch und (gegebenenfalls) metrisch zu analysieren.
Die Studierenden kennen wichtige Elemente der römischen (und griechischen) Kultur (z.B. Literatur, Mythologie, Geschichte, Philosophie, Rhetorik, Theaterwesen usw.) und (ansatzweise) ihrer Nachwirkung in Mittelalter und Neuzeit (Humanismus, Klassizismus) und können Bezüge zur Gegenwart und den Inhalten ihrer Studienprogramme herstellen

Module Academic English C1 (Part2)
30SM-E-Ac2 / Sprachkurs

Description:

General description:
Several of the sessions in this course can be described as learner training. Throughout the course, students become accustomed to using the latest online reference tools to help them achieve naturalness. They will be encouraged to reflect on what learner approaches work best for them, given their aptitudes and needs. They will learn to assess their own strengths and weaknesses as English users and will be shown how to improve where they feel improvement is needed. The course asks students to analyse the key communication types from their own academic fields and trains them to develop the lexical, grammatical, and discourse tools to replicate these communication types confidently. The course is supported by a Moodle platform.

Module ESS 244 Earth System Science Field Course
07SMESS244 / Sonstiges

Description:

General description:
Val Piora Field Course is aimed at exploring and researching the effects, interactions and feedbacks of two earth spheres on a natural process. It starts with a description of the botanical and field conditions at Val Piora, in Ticino, CH. It then examines through field data collection and in situ data analysis the response of a biotic system to changes or interactions between two earth spheres, for example hydrosphere and biosphere, or atmosphere and biosphere, or biosphere and anthroposphere. Finally, the results of the research are presented and discussed in situ.

ECTS: 2

Notes:
By booking this module you agree to the following authorisation clause: I agree that on my behalf bookings or reservations within the price range for the excursion are made on my behalf.

Insurance is the responsibility of the participants.

The excursion will take place in either the second, third or fourth week of June (calendar week 24-26). Students will be contacted by the module coordinator by email.

The Sustainable Development Goals (SDGs (https://sdgs.un.org/goals)) are a collection of 17 global goals interacting with each other, which are designed to be the blueprint to achieve a better and more sustainable future for all. The 2030 Agenda for SDGs is adopted by all United Nations Member States.

These SDGs are covered in this module: 4; 13; 14 & 15

Learning Outcome:

Module BIO 638 Next Generation Sequencing applied to Metagenomics
07SMBIO638 / Lecture with Practical Exercises

Description:

General description:
Next-generation sequencing (NGS) technologies have revolutionized many fields in biology and are changing the practice of medicine. One of the fields that have been particularly impacted is Metagenomics, which is the study of genetic material recovered directly from environmental samples without first culturing and isolating the organisms. Metagenomics analysis is used to explore the diversity, function, and ecology of different microbial communities such as microflora, water, soil, etc.
The practical consists of a library preparation starting from genomic DNA, followed by a sequencing run on both, a bench top and a single molecule sequencer. An introduction to existing and upcoming NGS technologies is also provided. Downstream analyses of the resulting data from both pipelines starts with the quality control and the management of the sequence data and expands to appropriate bioinformatics workflows to answer some of the key questions arising from this type of experiments (e.g., marker-gene and shotgun metagenomics).
Metatranscriptomics data will be covered briefly in the lectures.
The topics that will be covered include, methods of taxonomic assignment and clustering of targeted gene data; assembly, functional classification and characterization of shotgun metagenomic data; statistical models for estimating microbial diversity; and microbial community comparison methodology and metrics.

ECTS: 2

Notes:
For further information please check our website: https://fgcz.ch/education/metagenomicscourse.html

Room: at FGCZ Y59

Learning Outcome:
By the end of the course, participants will be able to:
1. Demonstrate an understanding of NGS technologies;
2. Assess the challenges involved in investigating the metagenome;
3. Perform library preparation and sequencing procedures in the laboratory;
4. Assess the quality of the library as well as the data obtained
5. Perform basic data analysis using a GUI interface pipeline
6. Apply NGS into a research-based context by:

a. formulating a meaningful research question
b. designing an experimental setup (based on the analytical techniques learned during the course) to address this specific question on metagenomics

Module Cognitive Economics (L) (Decision Theory)
03SMDOEC0883 / Course

Description:

General description:
This course introduces students to the current research frontier in cognitive economics. Cognitive economics studies the economic effects of imperfections in cognitive information processing: the ways in which people attend to, remember, aggregate and trade off variables to make economic decisions. The primary focus of this class are empirical applications, both in the lab and the field. The course is interdisciplinary and heavily draws on ideas and models from the cognitive sciences, including theories of attention, memory and noisy processing. A central idea in this course is that many seemingly-distinct empirical regularities and anomalies reflect generic simplification strategies that people adopt to reduce information-processing demands, including topics such as: (i) noisy approximations and resulting behavioral attenuation; (ii) comparative thinking; (iii) reducing representations of a problem by overweighting what's salient, gets cued in memory, or is deemed important; (iv) thinking in analogies and categories; and (v) devaluing or shying away from objects one cannot properly evaluate.

ECTS: 3

Module Scientific Presentation
04SMDER19001 / Kurs

Description:

ECTS: 4

Notes:
Kontakt-Email:
emmanuella.guenova@usz.ch

Learning Outcome:
The aim of this course is to help PhD students acquire the basic scientific presentation skills necessary to present their project work clearly to the scientific community. Typical media in this context include oral presentations or posters at conferences, scientific reports, and journal manuscripts. The course will focus on giving students practical experience, and constructive feedback, in good abstract writing (a key component of conference and manuscript submissions) and oral presentations. These sessions will be complemented by tutorials on the entire manuscript writing and submission process, as well as good figure preparation practices. The course is not intended to cover scientific communication to the media or public, or appropriate data analysis methods, but is meant to highlight best-practices regarding presentation of scientific content to peer scientists.

Preparation work: Prior to the course, participants are required to write a 200 word abstract, with title, on their PhD project and data as if it were to be submitted to a journal for publication. During the course, participants will also be asked to present their PhD project in a 5 minute presentation, with slides. Participants will receive individual constructive feedback for both exercises.

Module Doing Ethnography
06SM721o400 / Module

Description:

General description:
In this course, students will apply ethnographic methods within the framework of an individual research project. The aim is to learn how to set up an ethnographic research project independently, which means finding a research question, developing a research design and getting familiar with different methodological approaches. At the end of the course students will write a research report in which they summarise their findings and provide an anthropological analysis. Over the semester, students reflect upon their ethnographic research experiences in plenary and group discussions throughout the seminar.
Several readings have been selected to facilitate this process by serving as prompts for the weekly discussions.

ECTS: 3

Learning Outcome:
- Students learn to formulate a clear research question that concerns an anthropologically relevant problem or puzzle. - Students learn to decide which ethnographic methods are most suitable in order to answer their research question and can legitimise their methodological choices. - Students are able to become part of a social milieu that is unfamiliar to them and establish relations to people as an ethnographer. - Students learn to critically reflect upon their position as researchers, ethics, power dynamics, their own biases, and the role that their interlocutors ascribe to them while in the'field.'

Schriftliche Arbeit, im Anschluss an das SW Seminar. Die/der Studierende befasst sich selbständig mit einem Thema der sozialwissenschaftlichen Religionswissenschaft. Die Arbeit ist in wissenschaftlicher, sachlicher Sprache auf einem guten Niveau verfasst und bezieht Sekundärliteratur ein. Die Formalia (Quellenverweise) entsprechen akademischen Aufsätzen.

ECTS: 3

Notes:
Die Seminararbeit wird in der Regel zu einem SWRW Seminar geschrieben und im Folgesemester des entsprechenden Seminars der dozierenden Person abgegeben. Wer das Modul SWRW BA-Seminararbeit 2 absolvieren möchte, kontaktiert vorgängig die dozierende Person, bei der die Arbeit eingereicht werden soll. Diese gibt die genauen Abgabebedingen der Seminararbeit vor.
Das Modul SWRW BA-Seminararbeit 2 wird nicht von den Studierenden gebucht. Sondern der/die Dozierende leitet die Note nach Abgabe und Annahme an das Studiendekanat weiter. Dort wird das Modul gebucht und mit der Note als bestanden oder nicht-bestanden registriert.

Learning Outcome:
Die Studierenden sind in der Lage ein grundlegendes Thema der sozialwissenschaftlichen Religionswissenschaft zu bearbeiten und ihre Ergebnisse in wissenschaftlicher Form schriftlich auf einem guten sprachlichen Niveau zu formulieren. Sie können eine Frage/Themenstellung sinnvoll eingrenzen und systematisch bearbeiten, indem sie ihre Arbeit sinnvoll gliedern und aufbauen, Begriffe klären, sowie adäquate Sekundärliteratur hinzuziehen und diese sachgemäss zitieren. Sie können Quellen- und Sekundärliteratur in ihrer Argumentation verstehen und kritisch diskutieren. Sie können einen Aspekt von Religion in der Gegenwart als gesellschaftliches Phänomen vorstellen.

Module BME 357 Diseases at the human animal interface
07SMBME357 / Block Course

Description:

General description:
Approximately 70% of infectious diseases in humans ultimately have an animal source. Zoonoses are infectious diseases that transmit from animals to humans. These include Salmonella, influenza viruses and rabies amongst others. Newly emerging infectious diseases are of concern for potential pandemics and widespread human mortality, such as the pandemic of influenza in 1918-1920 which killed between 50 and 100 million people. The reservoir for Ebola virus is believed to be bats. HIV infection also crossed the species barrier, probably transmitted from chimpanzees to humans, via bush meat, in central Africa sometime around 1920. However HIV / AIDS was only recognized as a human infection in the 1980s. It is estimated that 60% of newly emerging infectious diseases are of animal origin. Also the costs of zoonoses may be enormous. This course will explore the reasons why infectious diseases emerge from animals and look at the consequences in terms of burden of disease and how the threats can be ameliorated.

ECTS: 6

Notes:
REGISTRATION FOR BLOCKCOURSES HERE
https://www.mybioportal.uzh.ch

Learning Outcome:
On successful completion of this course students should be able to

- list several diseases that have emerged from animal sources
- identify the pertinent issues involved in the emergence of new diseases from animal sources
- describe the possible impact of zoonotic diseases in terms of human and animal disease burden
- discuss the prioritization of zoonotic disease control, especially in resource limited settings

Key skills
At the end of the course each student should be able to

- choose and present a synopsis of a zoonotic disease, its importance and how it is transmitted to humans
- address and challenge policy for preventing and ameliorating the affects of zoonotic diseases

Learning Outcome:
Beschreibung:
Das Beruf von Medizinerinnen und Medizinern verändert sich rasch, und damit auch die damit verbundenen Tätigkeitsprofile. Diese reichen von der klinischen Tätigkeit oder einer selbständigen Praxis bis hin zu Forschung und Wissenschaft oder dem öffentlichen Gesundheitsdienst. In diesen Tätigkeitsbereichen wird es zunehmend wichtiger, dass Ärztinnen und Ärzte wissenschaftliche Studien und die Fachliteratur verstehen und kritisch hinterfragen können, um fundierte Entscheidungen in Diagnose und Therapie zu treffen. Darüber hinaus ist eine solide Grundlage in modernen Forschungstechnologien erforderlich, um biomedizinische Studien planen, durchführen und verstehen zu können.
Viele der neuen Forschungstechnologien befassen sich mit der Erhebung und Analyse von grossen Datensätzen mit Transcriptomics und Proteomics, und deren Integration mit klinischen Daten. In diesem Modul durchlaufen Sie einen vollständigen Forschungszyklus zur biomedizinischen Datenanalyse unter Verwendung von Transcriptomics- oder Proteomics-Daten aus unseren Forschungsprojekten. Dabei erwerben Sie Kompetenzen in der Anwendung verschiedener Bioinformatik-Methoden, um biologisch relevante Informationen aus grossen Datensätzen zu extrahieren. Zudem erlernen Sie unter Anleitung, und ohne dass Vorkenntnisse erforderlich sind, den Einstieg in die Programmiersprache R. Beim Durchlaufen des Forschungszyklus lernen Sie, relevante Fragestellungen zu formulieren, die entsprechenden Forschungsarbeiten eigenständig durchzuführen und die gewonnenen Resultate zusammenzufassen.
Mit diesem Modul erwerben Sie somit die Grundlagen für die biomedizinische Forschung mit grossen Datensätzen, auf der Sie in Ihren Master- und Promotionsarbeiten und in Ihrer späteren beruflichen Arbeit in verschiedenen Tätigkeitsprofilen aufbauen können.

Learning Outcome:
Kurzbeschreibung
This course provides an introduction to Translational Neuromodeling (the development of computational assays of neuronal and cognitive processes) and their application to concrete clinical questions (Computational Psychiatry/ Psychosomatics). It focuses on a generative modeling strategy and Bayesian models of neuroimaging data and behaviour, incl. exercises and project work.

Lernziel
To obtain an understanding of the goals, concepts and methods of Translational Neuromodeling and Computational Psychiatry/Psychosomatics, particularly with regard to Bayesian models of neuroimaging (fMRI, EEG) and behavioural data.

Voraussetzungen
PLEASE NOTE: for the exercises, knowledge of both MATLAB and Julia is required.

Semesterendprüfung

benotete Semesterleistung

Students are required to use one of the models discussed in the course and apply it to empirical data in order to address a given clinical question.
The model/analysis is to be submitted as open source code (in MATLAB or Julia). The motivation and results are presented in a 15 min oral presentation followed by 15 min critical discussion. Group work (up to 3 students) is required. The submitted code must be executable without any dependencies on specific operating systems or local setups.

Grading will depend on the (i) originality of the chosen modeling approach, (ii) quality and degree of completion of the modeling, (iii) clarity and functionality of the code, (iv) quality and clarity of the oral presentation, (iv) quality and clarity of the written project report.
The code is to be submitted by 29 May 2025 (23:59 CET) at the latest; the oral presentations take place on 30 May 2025 (exact time to be determined).
Admission to the final project is subject to students having successfully obtained at least 40% of the points for each exercise (1 miss allowed) during the semester.

Requirements:

Prerequisites: Studieneingangsphase erfolgreich bestanden

Assessment: Portfolio: Schriftliche Arbeit (75%) und der Nachweis von im Lernprozess zu erbringenden Leistungen (25%).

Die Gesamtnote setzt sich aus drei schriftlichen Leistungsnachweisen zusammen: Der Seminararbeit (75%), einer Quellenanalyse (12,5%) und einem Exposé (12,5%).

1. In der Seminararbeit verbinden die Studierenden Theorien und Methoden aus der Medienwissenschaft mit historischer Quellenarbeit zu einem der behandelten Medienkomplexe. Die Arbeit soll einen Umfang von 12-15 Seiten (30'000-37'500) Zeichen haben und ist bis zum 14. Dezember 2026 einzureichen. Grundsätzlich wird erwartet, dass die Arbeit zu einem der ersten beiden Blöcke - Radio oder Fernsehen - verfasst wird. In Absprache mit dem Dozenten ist es jedoch auch möglich, ein Thema aus dem dritten Block (Internet) zu wählen.
2. Neben der Seminararbeit sollen die Studierenden eigenständig eine noch nicht im
Seminar behandelte Quelle zu den Medienkomplexen Radio oder Fernsehen recherchieren. Diese Quelle ist zu beschreiben und historisch einzuordnen; zusätzlich ist eine kommentierte Literaturliste zu erstellen, die zum besseren Verständnis der Quelle beiträgt. Dieser Teil im Umfang von etwa zwei Seiten ist bis zur Sitzung einzureichen, in der der Themenblock Internet beginnt (ca. Anfang

Mai 2026).
3. Auf Basis dieser Vorarbeit verfassen die Studierenden bis zur letzten Sitzung ein Exposé im Umfang von etwa vier Seiten. Das Exposé soll Fragestellung, methodisches Vorgehen, theoretische Rahmung sowie die Rolle der ausgewählten Quelle im Argumentationszusammenhang skizzieren und dient der Seminararbeit als Ausgangspunkt.

Die regelmäßige Lektüre der Pflichttexte sowie die aktive Teilnahme an den Seminarsitzungen werden vorausgesetzt.

Module PHY 141 Physics IV
07SMPHY141 / Lecture with Practical Exercises

Description:

General description:
Dieses Modul gibt eine Vertiefung in die experimentellen Grundlagen der modernen Physik, also insbesondere der Quantenmechanik und der Atomphysik. Es ist eine Fortsetzung von PHY131 Physik III, das eine Einführung in experimentelle Grundlagen von Quantenmechanik und Relativitätstheorie umfasst.

Das Modul besteht aus einer Vorlesung (4 Lektionen in ungeraden Wochen, 2 Lektionen in geraden Wochen), sowie Übungen alle zwei Wochen alternierend mit der Vorlesung. Das Modul wird mit einer mündlichen Prüfung Anfang Juni abgeschlossen und ergibt im Total 5 ECTS.

ECTS: 5

Learning Outcome:
Am Ende der Veranstaltung sollten Studierende folgende Fähigkeiten erworben haben:
1. Ursprünge des normalen und anomalen Zeeman Effekts kennen
2. Eigenschaften von Drehimpulsen und Spins in der Quantenmechanik verstehen
3. Den Ursprung des Periodensystems aus der Atomphysik herleiten können
4. Molekülbindungen aus der Quantenmechanik verstehen können
5. Optische Übergänge quantenmechanisch beschreiben
6. Prinzipien des Lasers verstehen und anwenden.
7. Die Prinzipien der Kernspin-Resonanz verstehen und anwenden
8. Supraleitung als makroskopisches Quantenphänomen verstehen
9. Verschränkte Zustände und deren Eigenschaften beschreiben können
10. Den Kollaps der Wellenfunktion und verschiedene Interpretationen der Quantenmechanik beschreiben

Target Groups:
Physik-Studierende im Haupt- und Nebenfach, Naturwissenschafter mit Interesse an der Quantenphysik

Module BIO 125 Development of Multicellular Systems
07SMBIO125 / Lecture with Practical Exercises

Description:

General description:
Bio 125 addresses how complex multicellular forms - tissues, organs and organisms - emerge from single pluripotent cells. The course will explore the genetic, cellular and physical processes that ensure robust embryonic development and how insights from this field are revolutionizing the treatment of disease and tissue engineering approaches.

ECTS: 3

Learning Outcome:
Upon completion of this course, students will be able to elaborate on fundamental developmental biological concepts, such as cell differentiation from multipotent stem cells, tissue patterning, morphogenesis, and the regulation of cell numbers and tissue growth.
Moreover, students will be able to explain how developmental mechanisms impact on medically relevant processes such as cancer, wound repair, and regeneration. Finally, the strong focus on cutting-edge interdisciplinary approaches will familiarise students with widely used experimental tools such as in vivo imaging, organoids and omics.

Module BME 361 Randomised trials – From lab experiments to large preventive trials
07SMBME361 / Block Course

Description:

General description:
The randomised trial is one of the most important experimental study designs in laboratory, clinical and community-based research. This course covers the way research questions are set up for randomised trials, key methods of randomised trials, aspects of reproducibility (registration and publication of protocols and availability of data sets), sample size calculation and analytic approaches, outcome selection, assessment of subgroup effects as well as steps to organize and conduct randomised trials (ethics, databases, quality control).

This course follows the approach of practice-based learnings where the students work in groups to design, conduct, analyse and report an entire trial during the course. Input lectures introduce the concepts, which are then conceptualized and applied to the trials.

ECTS: 6

Notes:
REGISTRATION FOR BLOCKCOURSES HERE
https://www.mybioportal.uzh.ch

Learning Outcome:
- Able to formulate a scientific question for a randomised trial and to justify the relevance of the question given the existing evidence.
- Able to anticipate bias (i.e. information bias, selection bias, confounding) when planning a randomised trial and to minimize its consequences for inferences through optimal study design and data analysis.
- Know how to responsibly conduct randomised trials and to align with all relevant ethical standards and laws.
- Able to explain the specifics of different types of randomised trials (lab experiments, early exploratory trials, definitive trials, preventive trials etc).
- Know some key analytical approaches for trials.
- Know how trials should be reported.
- Know how results of different trials are summarised.

Module Obtaining data from the internet: Data crawling for research in business and economics (S)
03SMDOEC0915 / Doktorandenseminar

Description:

General description:
The increasing availability of semistructured data on the Internet is becoming an important data source for research in economics and management. However, much of the data cannot be readily downloaded but can only be accessed through websites. The manual extraction of content from websites is burdensome and becomes with increasing size of the underlying data quickly unfeasible. One solution is to systematically extract this data with automated programs written for this purpose, so- called web crawling or web scraping.
This active learning workshop introduces participants to some of the key tools, frequent complications, and tips and tricks of web crawling. The goal of this course is to provide a good understanding about the possibilities of crawling, while also giving enough time for participants to work on their own project in a hands-on approach where participants actively solve exercises that are directly connected to their own research interests.
In addition to teaching the basic skills needed for web crawling, the workshop will also cover more advanced topics such as accessing websites through APIs and Selenium, extracting text using HTML and CSS, scaling web-scrapers using cloud-based solutions and using Machine-Learning- based methods to filter and combine resulting large-scale data-sets.

ECTS: 3

Notes:
The seminar is limited to a maximum of
20 participants. Please apply via e-mail to entrepreneurship@business.uzh.ch. It is not allowed to attend the seminar without confirmation.
Lecturers: Prof. Dr. Christian Peukert & Prof. Dr. Jörg Claussen

Learning Outcome:

Module GEO 835 Geography of Sustainability Transitions
07SMGEO835 / Seminar

Description:

General description:
This seminar deals with the socio-spatial processes that influence transitions towards increased sustainability. The topic is approached from recent theorizing in sustainability transitions, economic geography and environmental innovations research. The focus is on the complex geographies and increasing internationalization of innovation processes in 'green' sectors like renewable energy, water reuse or electric mobility. The seminar is based on literature on socio-technical transitions, which is supplemented with empirical insights on the transformation of urban infrastructure sectors. The participants deal intensively with the specific geographical challenges for sustainability transitions and develop an in-depth understanding of innovation processes that transcend the borders of cities, nation states or continents. The course reflects critically on how inherently local innovation problems (i.e. developing a 2000 Watt society in the city of Zurich), is influenced by actors and processes from (supra-)national scales and how local stakeholders may act in multi-scalar space to push for radical change.

ECTS: 3

Notes:
The Sustainable Development Goals (SDGs (https://sdgs.un.org/goals)) are a collection of 17 global goals interacting with each other, which are designed to be the blueprint to achieve a better and more sustainable future for all. The 2030 Agenda for SDGs is adopted by all United Nations Member States.

These SDGs are covered in this module: 6; 7 & 9

Learning Outcome:
This seminar deals with theoretical approaches for understanding and assessing sustainability transitions. The focus is on the complex geographies of innovation processes in 'green' sectors like renewable energy, water reuse or electric mobility. The seminar is based on literature on socio-technical transitions and economic geography, which is supplemented with empirical examples of transformations in urban infrastructure sectors. The participants deal intensively with the specific geographical challenges for sustainability transitions and develop an in-depth understanding of how green innovation and transition processes depend on dynamics that transcend the borders of cities, countries or continents. The course reflects critically on how inherently local innovation problems (i.e. reaching net-zero emission goals in the city of Zurich), is influenced by actors and processes from regional, national and international scales and how local stakeholders may act in multi-scalar space to push for radical change.

Upon completion of this course, successful participants will...
1. have acquired an overview of the relevant academic literature on the geography of sustainability transitions
2. have developed an in-depth understanding of the institutional, political and geographical challenges of environmental innovation, especially in urban infrastructure sectors
3. have interactively applied the theoretical concepts to an empirical case study (the 2000W society in the city of Zurich) and acquired key academic skills like writing, debating and presenting

Target Groups:
This course is offered as a consolidation module in the MSc program in Geography and is additionally available as an option for students from other Master programs.

Module Anthropology of Southeast Asia
06SM721o280 / Module

Description:

General description:
Việt Nam, a country associated with decades and centuries of war in the twentieth century, is now a household name as one of the most sought-after tourist destinations. The country is full of parallels and paradoxes: an increasingly open market "rising tiger" economy in a socialist republic under the governance of a single-party communist system, bomb-ridden fields hidden in the charm of fascinating landscapes, modern architecture and lifestyles combined with thousands of years of cultural practices.

This module offers an anthropological exploration of Viet Nam as a dynamic site of historical depth, cultural complexity, and rapid transformation beyond common imaginaries. Students will engage with these transformations, tracing how colonialism, war, and post-war reconstruction continue to shape today's narratives of identity and belonging, daily life, social relations, and cultural expression. Through key themes such as history and memory, economic reform, gender, class, urbanisation, religion and spirituality, diaspora and migration, food and contemporary arts, we will look at what makes Viet Nam the country it is today. The course draws materials from anthropological literature on Viet Nam together with films, music, fiction and non-fiction, exhibitions as well as other media.

ECTS: 6

Notes:
Students who have taken the module "Anthropology of Southeast Asia" with Prof. Annuska Derks in Spring Semester 2023 are asked to contact the instructor before booking the module: phuong.nguyen@isek.uzh.ch.

Learning Outcome:
The course is designed to help students:

- gain a holistic understanding of current issues and context in Viet Nam through the study of anthropological research;
- critically engage with different themes and representations of Viet Nam;
- synthesise current debates and develop thorough analysis through research on topics and themes of their choice.

Kontakt-Email:

monika.hebeisen@uzh.ch

Learning Outcome:
Lerninhalt:
The course offers an introduction to data analysis for medical research in the programming language R. The R system of statistical computing is freely available from https://www.r-project.org and provides a simple and flexible software environment for statistical analyses and graphics.
Tailored to the application in medical research the course covers basics of programming and data formats in R, and the essential steps of a data analysis including data manipulation, descriptive statistics, statistical tests and graphical representations. The course focuses on problem-based learning by combining the theory and the application to examples from medical research. Basic statistics knowledge from bachelor and master program Medicine is a prerequisite.

Lernziel:

Module PHY 127 Physics for Life Sciences II
07SMPHY127 / Lecture with Practical Exercises

Description:

General description:
PHY127 explains concepts from modern physics that are relevant for biomedicine. Modern physics topics such as relativity, quantum physics, radiation physics, nuclear physics, and particle physics will be introduced in a basic way in order to understand tools used in medicine for diagnostics and treatment such as X-rays, CT scans, PET scans, MRI, and NMR. PHY 127 builds upon the basic knowledge of kinematics, fluids, thermodynamics, electricity & magnetism, and waves that was expla PHY 117. Lectures will include experimental demonstrations.

Exercises will be assigned every 2 weeks, and will be thoroughly explained in the exercise sessions.
The final exam will be in a format similar to the exercises, and cover material similar to the exercises, as well as other lecture material, including experiments.

Module BME 351 Biomedical data mining
07SMBME351 / Block Course

Description:

General description:
In biomedical research, large datasets generated by technologies such as transcriptomics and mass spectrometry-based proteomics provide quantitative information on transcript and protein abundance, as well as their variation under different conditions or between groups. These data are then analysed to retrieve relevant information and are often integrated with additional molecular and clinical data.
In this block course, you will analyse a dataset from ongoing projects of the participating research groups. To extract biologically relevant information, you will acquire core skills for analysing such life-science data, focusing on the use of the R programming language and bioinformatics methods. Through lectures and tutorials, you will learn key analytical approaches such as over-representation analysis and functional annotation.
Applying these skills, you will follow a complete research cycle. Initially, you will work on predefined tasks using specified methods. Then, adopting an inquiry-based learning approach, you will formulate your own research question, develop an appropriate analysis strategy, and carry it out. Throughout the course, you will conduct independent research under the close supervision of experienced scientists, with regular discussions on your progress.

At the end of the course, you will present your analyses and results in an oral talk and summarise them in a written report.

ECTS: 6

Notes:
REGISTRATION FOR BLOCKCOURSES HERE
https://www.mybioportal.uzh.ch
or to katja.baerenfaller@siaf.uzh.ch (waiting list).

Course location: The first 3.5 days of the course and 2 days in the following week will take place on site at the Swiss Institute of Allergy and Asthma Research (SIAF) in Davos. The remainder will be taught off site but online, including regular lectures via Microsoft Teams/Zoom and online tutorials. Travel costs by public transport and accommodation in Davos during the first part of the course will be reimbursed.

Learning Outcome:
By the end of this module, students should be able to

- use the scripting language R for biostatistical analysis and evaluation of datasets
- analyse large and complex biomedical datasets in relation to specific scientific questions.
- identify biologically relevant information in such biomedical datasets.
- formulate solid and testable research questions and working hypotheses based on data mining results.
- apply methods and tools for biomedical data mining.
- interpret statistically evaluated data using various resources and tools, including functional classification of selected transcripts and proteins, identification of co-expression and protein-protein interaction patterns, and elucidation of the localisation and potential biological functions of individual proteins.
- visualize results with a focus on relevant aspects.
- present the insights gained from data mining efforts coherently.
- summarize findings accurately and concisely.

Merkmale:	Target Group: Suitable for English Speakers
Responsible instructor:	Katja Bärenfaller

Requirements:

Prerequisites:	Basic studies completed Scripting in R is part of the course. Students with no prior knowledge will learn the basics with guidance, while those with prior experience will have the opportunity to further develop their coding skills.
Assessment:	Towards the end of the course, students will give an online presentation of their results. After the course, a written report on their findings must be submitted. Both the presentation and the report will be in English. The presentation will contribute 40% to the final grade, and the report 60%. - graded

Module MAT 576 Finite Fields - Theory and Applications
07SMMAT576 / Lecture with Practical Exercises

Description:

General description:
Finite fields have been deeply studied in the last century, and still nowadays they attract many researchers, due to their applications in various areas of mathematics and computer science. It is well-known, indeed, that they play a crucial role in the efficiency and security of everyday communication. However, they have also relations to other more theoretical areas such as finite geometry and combinatorics. As an example, the theory of finite fields has an important role in the construction of latin squares and related combinatorial objects (e.g.
sudoku). The aim of this seminar is to provide a brief introduction to finite fields with a focus on some of their many fascinating applications. Among those applications, we will study in particular their connections to combinatorics, finite geometry, coding theory and cryptography.

ECTS: 6

Notes:
- Mathematical field: Algebra
- There will not be any recordings

Learning Outcome:
A basic knowledge of the arithmetic of finite fields, and their use in other related areas of mathematics and computer science. The students will be introduced to the role of finite fields in combinatorics, finite geometry, coding theory and cryptography.

Target Groups:
BSc and MSc students

Languages of Instruction:
English

Course Materials:	"Finite fields and applications", by G. L. Mullen and C. Mummert, Student Mathematical Library, AMS, 2007 "Finite Fields", by R. Lidl and H. Niederreiter, Cambridge University Press, 1997. "Introduction to finite fields and their applications", by R. Lidl and H. Niederreiter, Cambridge University Press, 1994.
Merkmale:	Target Group: Suitable for English Speakers
Responsible instructor:	Joachim Rosenthal

Requirements:

Prerequisites:	Linear Algebra I & II, Algebra. Familiarity with field theory is beneficial, but essentials will be repeated at the beginning of the lecture.
Assessment:	- Written exam (repetition exam may also be oral) - Language of exam: English - There will be an exercise testat: Successful participation in the exercises, 50% of the exercises completed satisfactorily and 2/3 of the exercise sheets submitted (details provided by the lecturer in the lecture)

andrea.bink@usz.ch

Learning Outcome:
Es werden mit aufsteigendem Schwierigkeitsgrad typische und relevante Erkrankungen im Neuroradiologischen Themengebiet als Fallbeispiele vom Dozierenden per Email zur Verfügung gestellt. Begleitet werden die Fallbeispiele von Fragen an die Studierenden.

In diesem Kurs werden insgesamt 14 Fälle von den Studierenden schriftlich bearbeitet.
Die Studierenden lernen sich in schriftlicher Form präzise in Bildbeschreibung und Differenzialdiagnose auszudrücken. Sie entwickeln eine Selbständigkeit in der Erarbeitung eines neuen Sachverhalts und erweitern ihr Wissen im Gebiet der Neuroradiologie.
Der Dozent gibt dem Studierenden ein direktes Feedback durch Zurücksenden des korrigierten Textes.

Eine Gesamtevaluation aller 14 Fälle wird vorgenommen anhand der Punkte: Richtigkeit der Beschreibung der Pathologie Benennung der Differenzialdiagnosen

Module BME 363 Gene therapy from bench to bedside
07SMBME363 / Block Course

Description:

General description:
The emerging field of gene therapy is entering clinical practice at fast pace. Highly skilled biomedical experts are therefore of utmost importance for clinical translation of basic science findings. We therefore propose a novel modul covering relevant aspects required theoretical and practical background

The module contains a lecture series of 1 week in total completed by a written exam (2-3 hrs). This theoretical part is completed by a 2.5-week individual laboratory course rotating in participating labs. Practical work will be completed by presentations of all lab work by participants in a half-day concluding symposium.

Theoretical part The lecturing covers today's technical and medical aspects of vectorology, non-viral vector systems, gene editing and clinical gene therapy. The mechanisms for transfer of genetic material into cells, gene editing, target cells, animal models, specific applications for monogenetic diseases, potential adverse effects, and novel developments in the field of gene therapy will be taught

Practical Part

Group Reichenbach Exercises on lentiviral vector technology

- Produce Plasmid for viral vector production
- Produce lentiviral vectors from plasmids for gene manipulation
- Transduction of cells with lentiviral vectors

Group Speck Exercises how to approach a gene engineering project building upon the lectures given in the first week.

- Elaborate a concept and define an experimental design
- Define the needs how to go ahead from the bench to the clinics.

Group Schwank Exercises how to approach a gene editing via CRISPR/Cas9.

- design gene editing experiments to correct disease-causing mutations,
- analyse efficacy and safety of gene editing approaches.

ECTS: 6

Notes:
REGISTRATION FOR BLOCKCOURSES HERE
https://www.mybioportal.uzh.ch

Notes: The theoretical part is offered as a separate module, BIO 708, in which the number of participants is not limited. Registration via normal UZH module booking.

Learning Outcome:
Theoretical Part Knowledge of important gene transfer technology, gene editing, viral vectors, and clinical gene therapy approaches Knowledge of application in human diseases Knowledge of the limiting factors (in terms of safety and efficacy)

Practical Part Knowledge of designing and analysing experiments Knowledge of production of plasmids and viral vectors Knowledge of genetic manipulation of cells with viral vectors and gene editing (CRISPR/Cas9) Knowledge of translating basic research into clinical application

Module GGP.S480 Global Challenges, Consolidation II in Geography
07SMGEO906 / PHZH SEK I Module

Description:

General description:
The United Nations lists global climate change, clean water and oceans, a future worth living for children and young people, safeguarding democracy and political participation among the current global challenges. These and many other complex problems can only be tackled successfully, if they are analyzed and acted upon at different scales. This in-depth module in geography focuses on specific topics (e.g. ocean and people, local impacts of climate change, Black Lives Matter), while also focusing on specific regions, using concrete examples.

ECTS: 3

Notes:
The module is assessed on a pass/fail basis. This assessment is based on a written performance task, the content and formal requirements of which are specified and explained during the module. The written performance task may be repeated once.
The Sustainable Development Goals (SDGs (https://sdgs.un.org/goals)) are a collection of 17 global goals interacting with each other, which are designed to be the blueprint to achieve a better and more sustainable future for all. The 2030 Agenda for SDGs is adopted by all United Nations Member States.
This module touches on SDGs 8; 10; 13; 14 & 15.

Module Educational Design Thinking
06SM090DT / Module

Description:

General description:
Unsere global vernetzte Welt wandelt sich ständig und stellt uns vor Herausforderungen, die mit herkömmlichen Methoden oft nicht zu bewältigen sind. Im Seminar steht das Konzept des Design Thinking (DT) im Vordergrund, welches einen wirkungsvollen Ansatz bietet, um systematisch neue Lösungen für komplexe Probleme zu entwickeln. DT bietet Lehrenden und Lernenden die Möglichkeit, in konstruktiver Teamarbeit Probleme kreativ und innovativ anzugehen und neue Ideen hervorzubringen. Sie entwickeln im Seminar Lernkonzepte entlang verschiedener Themen, um Schüler*innen auf einem innovativen, lösungsorientierten Umgang mit Herausforderungen der Zukunft vorzubereiten. Dabei wird der DT-Prozess durchlaufen, welcher Lehrende dabei unterstützen kann, neue Denkweisen, Perspektiven und Bedürfnisse in die Unterrichtsvorbereitung einzubringen.

Module BIO 446 Applied RNA Methodology
07SMBIO446 / Block Course

Description:

General description:
The course is based on the latest RNA-research and creates an interface between theory, practice and current research. Students gain insight into different methods for the investigation of catalytically active RNAs. The spectrum ranges from RNA structural biology using NMR (Isotop labeling), to various chemical investigation methods for determining the secondary structure (Radioactive labeling), to the observation of dynamic processes determined by fluorescence and single-molecule spectroscopy (Fluorescence labeling, Förster Resonance Energy Transfer, FRET).

Learning Outcome:
Professional competences: The students expand their biochemical background with a special focus on RNA biology and RNA methodology. They learn how to study biomolecules using different interdisciplinary methods and how to link these research results.

Inter-disciplinary competences: At the end of the course, the students will be familiar with various biochemical and biophysical methods and will be able to assess for themselves which method is best suited to which problem. In addition, they learn to put the results of different methods into context and to understand them in the overall picture.

Module INI 508 Neuromorphic Intelligence
07SMINI508 / Lecture with Practical Exercises

Description:

General description:
"Students will learn about the dynamical properties of adaptive integrate and fire neurons connected among each other via dynamic synapses. They will explore different neural circuits configured to implement computational primitives such as normalization, winner-take- all computation, selective amplification, and pattern discrimination. The experiments will consist of measuring the properties of real silicon neurons using full-custom neuromorphic processors, and configuring them to create
neural architectures that can robustly process sensory signals and perform pattern discrimination despite, or thanks to, the limited resolution and large variability of the their individual processing elements."

ECTS: 6

Notes:
Exercises: 3h; by arrangement.
The exercises consist of doing experiments with the (full custom) DYNAP- SE neuromorphic chips and boards we have, that are interfaced to the PC, and in exploring either computational neuroscience models (e.g., attractor networks, coupled oscillators, etc.) or simple AI models (e.g., 2 or 3 layer MLP networks) with a hardware/software co-design effort.
It is 3h/week and it can be done on individual basis or in groups of max 3 students.

Learning Outcome:
The objective of this course is to introduce students to the field of "neuromorphic intelligence" with lectures on spiking neural network architectures implemented using mixed-signal silicon neuron and synapse circuits, and with laboratory sessions using neuromorphic chips to measure the computational properties of different spiking neural network architectures. Class projects will be proposed to validate the models presented in the lectures and carry out real-time signal processing and pattern recognition tasks on real-world sensory data.

Module AST 231 Astronomy practicum: II
07SMAST232 / Praktikum

Description:

General description:
Take spectacular images of nebula, galaxies, star clusters etc.

ECTS: 6

Notes:
Limited number of places.
Registration by email to Ben Moore. Note: This course is only open to those students taking either the minor programs in astrophysics, or astronomy & astrobiology.

For more information: http://www.ctac.uzh.ch/teaching/astrophotography/

For more information: please contact ben.moore@uzh.ch

Learning Outcome:
The aim is to take high quality astronomical imaging data of an interesting object of your choice. Our telescope is a high quality precision instrument, but it is not the Hubble Space Telescope. However, because of its large field of view you can still take quite spectacular images with this equipment. This makes it ideal for astrophotography of nebula, galaxies, star clusters etc.

Target Groups:
Participants of the minor program Astronomy and Astrophysics

Languages of Instruction:
English or German

Merkmale:	Target Group: Suitable for English Speakers
Responsible instructor:	Ben Moore

Requirements:

Prerequisites:	Successful completion of Part I. enrollment in one of the minor programs in Astronomy & Astrobiology, or Astrophysics. (If available, open to all students of the university but please contact the module coordinator first).
Assessment:	You will be able to reserve a telescope for several weeks at a time so you can take it to a site that is as 'dark' as possible. Yo will take data, reduce the data and write a report. It is a lot of work but a lot of fun.

Module EEE 357 Agroecology, Food Security & Sustainable Production
07SMEEE357 / Lecture with Practical Exercises

Description:

General description:
Sustainable food production is essential four our daily life as we rely on the food we eat. At the same time, agricultural production has a big impact on the environment and, currently, there is much debate on various topics that are directly and indirectly linked to agriculture (e.g. pesticides, GMO's, climate change, biodiversity loss, food security). This course provides an overview of a wide range of themes related to agroecology and food security. We will discuss various options for sustainable food production, including organic and conventional agriculture, the use of biologicals to boost agricultural production, crop diversification and various biotechnological approaches (e.g. genetically modified crops, genome editing) that can make crops resistant to pests, various stresses, and climate change.
Moreover, we will discuss the impact of agriculture on the environment covering themes such as biodiversity, climate change, and the use of pesticides and fertilisers. In addition, we will evaluate the strengths and weaknesses of different productions systems and discuss alternative practices such as agroforestry, regenerative agriculture, and conservation agriculture. There will be an excursion to an organic farm and we will visit various field experiments at Agroscope, the Swiss centre of excellence for agricultural research.

ECTS: 3

Notes:
Exam: 26.05.2026;

Learning Outcome:
By the end of this course, the students should be able to

- evaluate the strengths and weaknesses of different production systems and practices including organic and conventional farming, GMOs, the use of pesticides, and the potential of biologicals for sustainable food production.
- evaluate the impact of agriculture on the environment (climate change, biodiversity, nutrient cycles, pesticides).
- develop a balanced opinion on a wide range of themes related to agriculture and the environment, including pesticide use, organic agriculture, biotechnological solutions for food production (e.g. GMOs), climate change, nutrient cycles, food security, and biodiversity loss.

Module Roman Civil Law
02SM60PM5 / Prüfung ohne Lehrveranstaltung

Description:

General description:
Das Modul Römisches Privatrecht dient der Einführung in das Studium des Privatrechts. Entsprechend werden grundlegende Institute, wie Eigentum und Vertrag, Rechtsfiguren, wie Stellvertretung und Auftrag sowie Rechtsprinzipien,wie Formalismus und Typenzwang, am historischen Beispiel vorgestellt und analysiert. Das Römische Privatrecht bildet die gemeinsame Grundlage der europäischen Privatrechtsordnungen und war auch für die Entstehung des schweizerischen Obligationenrechts und Zivilgesetzbuchs massgeblich, weshalb diese Regelungen ebenfalls vergleichend vorgestellt und gewürdigt werden. Im Einzelnen erhalten die Studierenden Einblick in die Institute und Prinzipien des Personenrechts, des Sachenrechts und vor allem des Obligationenrechts in Form des Vertrags- wie des Haftpflichtrechts. Ein besonderer Schwerpunkt liegt dabei auf der Analyse von römischrechtlichen Quellentexten (in deutscher Übersetzung), die bestimmte Problemlagen und Fallgestaltungen veranschaulichen und es erlauben, Gemeinsamkeiten und Unterschiede zwischen dem antiken römischen Recht und der heutigen Rechtslage zu erfassen und herauszuarbeiten.

ECTS: 7.5

Module Legal Methods and Legal Theory
02SM60PM3 / Course

Description:

General description:
Die Lehrveranstaltung führt in die Grundlagen der Methodenlehre sowie der Rechtstheorie ein. Thematisiert werden dabei die juristischen Auslegungs- und Argumentationsmethoden, die Beziehung zwischen Recht und Sprache, Probleme der juristischen Begründung sowie die ideengeschichtliche Einordnung der Methodenlehre in theoretische Diskurse. Die Verbindung von juristischer Auslegung und Begründung mit normativen Theorien wird untersucht und wesentliche Probleme normativer Theoriebildung werden erörtert. Ein Überblick über Form und Kerninhalte von Rechtsordnungen aus theoretischer Perspektive soll verschafft werden, um die Frage nach dem Gehalt und der Legitimation der Leitideen moderner Rechtsordnungen und ihrer Rolle in der Rechtsanwendung zu beantworten. Welche Bedeutung haben Gerechtigkeit, Freiheit, Gleichheit und Würde von Personen in der konkreten Rechtsanwendung und juristischen Argumentation? Welche anderen normativen Prinzipien sind relevant? Weiter wird untersucht, welchen Grad an Gewissheit die Auslegung und Begründung von Recht gewinnen kann. Welche Rationalitätsansprüche können in einer Rechtskultur eingelöst werden? Welche sind für einen demokratischen Rechtsstaat unverzichtbar? Die Reflexion der Methoden der Rechtsanwendung, so wird sich zeigen, führt zwangsläufig zu einer ideengeschichtlich orientierten Theorie von Demokratie, Menschenrechten und rechtlicher Gerechtigkeit.

ECTS: 3

Notes:
Weitere Informationen werden eine Woche vor Semesterbeginn über die Website von Matthias Mahlmann zugänglich gemacht.

Learning Outcome:
1. Kenntnis und Verständnis der juristischen Auslegungsmethoden
2. Entwicklung eines kritischen Methodenbewusstseins
3. Kenntnis grundlegender Begriffe der Rechtstheorie
4. Kenntnis und kritische Reflexion wesentlicher Elemente der Rechtstheorie
5. Entwicklung der Kompetenz zur folgerichtig begründeten, selbstkritischen Argumentation
6. Anwendung methodologischer und theoretischer Konzepte und Argumente auf konkrete Fallbeispiele

Module Comparative Administrative Law
02SM90CL1 / Course

Description:

General description:
Many countries struggle with the amount of regulation that administrative authorities must implement. Although the subject areas of such regulation are quite di-verse, the implementation is usually guided by some general rules, often unwritten. These rules form what is called "Administrative Law" (or "General Administrative Law").
The course looks into these rules from a comparative perspective. Common problems that may arise in the administrative context are illustrated by cases and other materials. Students are asked to comment on these cases and compare them - if possible - to their own legal background.
The course is divided in two parts. At the beginning of the semester, students will be introduced to the typical topics of administrative law and discuss cases. In the second part, they will present a case from their home country (or from elsewhere) and discuss it in class (likewise the earlier cases). This will be the exam. Active participation in class will be mandatory and be taken into account for the final mark (33 %).

ECTS: 6

Notes:
The number of participants may be limited.

Module Deep Learning for Doctoral Students (L)
03SMDINF1131 / Course

Description:

General description:
The Deep Learning lecture provides a mathematical understanding of artificial neural networks and, particularly, deep learning models. Additionally, an overview of modern deep learning architectures is provided. There is an exercise that is connected to lecture, which is optional for doctoral students.
In the exercise,we will use a deep learning framework, PyTorch, to employ the theoretical knowledge in practical examples.

ECTS: 2

Notes:
The lecture (and the exercise) will generally be carried out onsite. A digital backup will be provided by live streaming of the lecture and the exercise via Zoom. There will be no recordings.
The course takes place in the same room as Deep Learning (MI0027).
If you have already taken the course "Deep Learning" (MI0027 or MINF4568) you are not allowed to book this course.

Learning Outcome:
Students know the mathematical background of deep learning, which types of problems could be solved and what are the current issues with deep learning systems. Students are able to apply concepts of deep learning in their research.

Target Groups:
Doctoral students from any scientific field that want to or already do employ deep learning in their research.

Languages of Instruction:
English

Course Materials:	Slides for the lecture will be provided online during the lecture. Other references: - C. M. Bishop. "Neural Networks for Pattern Recognition", Oxford University Press, 1995. - I. Goodfellow, Y. Bengio, A. Courville. "Deep Learning", MIT Press, 2016. - S. Skansi: "Introduction to Deep Learning - From Logical Calculus to Artificial Intelligence", Springer, 2018. - Other recent scientific publications that will be announced in the lecture.
Merkmale:	Target Group: Suitable for English Speakers
Responsible instructor:	Manuel Günther

Requirements:

Prior Knowledge:	The lecture includes a mixture of calculus, analysis and statistics, so a good understanding of math is required to follow the mathematical details. For working on the final project and following the exercises, programming experience in Python is beneficial.
Assessment:	Doctoral students agree on a short project, possibly from their own field of research, six weeks after starting the lecture at the latest. At the end of the

semester, there will be one or more joint meetings where each doctoral student discusses their project, which will include 20 minutes of presentation followed by 10 minutes of questions from the audience. These meetings will generally be carried out onsite, online participation can be arranged if necessary.

Grading Scale:	Pass/Fail
Repeatability:	Can be repeated once

Module Studium Digitale
10SMSTS-100 / Module

Description:

General description:
Um die Digitalisierung als Ganzes zu begreifen und um erfolgreich studieren zu können, muss man verstehen, was «Digitalisierung» ist.
Deshalb braucht es eine digitale Grundkompetenz. Ziel der von derDigital Society Initiative der UZH entwickelten Online-Vorlesung «Studium Digitale» ist es, eine erste Einführung in dieses weite undkomplexe Thema zu geben.
Didaktisches Konzept: Online-Kurs (auf Deutsch) bestehend aus Videolektionen, Übungen und Selbstlerntests.
Der Kurs wird auf OLAT durchgeführt. Die inhaltliche Kursbetreuung wird von den Dozierenden (oder ggf. ausgewählten Mitarbeitenden) geleistet, die generelle Maintenance und administrative Betreuung liegt bei der DSI.

ECTS: 3

Notes:
Dieses Modul findet als reiner Online-Kurs (auf Deutsch) bestehend aus Videolektionen, Übungen und Selbstlerntests statt. Die Studierenden können die Lerninhalte zu dem für sie passenden Zeitpunkt anschauen und studieren. Der Leistungsnachweis findet als Online-Prüfung statt. Das Team Studium Digitale bietet zum Anfang und Ende des Semesters jeweils eine digitale Sprechstunde zu organisatorischen Fragen an.
Kurz erklärt: https://t.uzh.ch/1Pn

Learning Outcome:
Zentrale Inhalte und Anwendungen digitaler Datenverarbeitung und Technologie sollen verstanden werden. Grundfragen im Kontext der Digitalisierung sollen eingeordnet und kritisch reflektiert werden können. Durch ein erfolgreiches Bestehen soll ein solides Grundwissen in den folgenden Bereichen entstehen:

1. Daten und Information
2. Programmieren und Computational Thinking
3. Digitale Gesellschaft
4. Digital studieren

Auf einer Anwendungsebene sollen Studierende lernen, digitales Arbeiten zu strukturieren und digitale Hilfsmittel sinnvoll in ihrem Studium anzuwenden.

Module GEO 888 GIS for Environmental Indicators
07SMGEO888 / Lecture with Practical Exercises

Description:

General description:
Integrating hetrogeneous spatio-temporal data across scales is a common use of GIS to generate derived datasets providing information about the environment. Such datasets are often used as indicators at local, national and global scales to provide scientists, policymakers and the public with information, for example with respect to progress towards sustainable development goals. In this course we will investigate how such indicators are created, exploring the complete data flow from data sources through their integration and analysis to representation.

ECTS: 3

Notes:
The Sustainable Development Goals (SDGs (https://sdgs.un.org/goals)) are a collection of 17 global goals interacting with each other, which are designed to be the blueprint to achieve a better and more sustainable future for all. The 2030 Agenda for SDGs is adopted by all United Nations Member States.
  These SDGs are covered in this module: 1; 3; 10; 11 & 15

Learning Outcome:
- You are aware of ways of searching for and evaluating the quality of spatial data at national and global scales.
- You can effectively transform spatial data to allow their integration to create useful environmental indicators.
- You can apply and document effectively the use of analysis methods to create environmental indicators.
- You can discuss the strengths and weaknesses of environmental indicators with respect to different sources of uncertainty.
- You can summarise and present environmental indicators appropriately according to user groups.

Module KRI 209 Diffraction Physics in Materials Science
07SMKRI209 / Lecture with Practical Exercises

Description:

General description:
The lecture focuses on diffraction and scattering phenomena in materials science beyond basic Bragg diffraction. Introducing the Born approximation and Kirchhoff's theory, diffraction from ideal and non- ideal crystals is treated including, e.g., temperature and size effects, ordering phenomena, small-angle scattering and dynamical diffraction theories for both electron and X-ray diffraction.
The course provides a general introduction to advanced diffraction phenomena in materials science. The lecture series covers the following topics: derivation of a general scattering theory based on Green's function as basis for the introduction of the first-order Born approximation; Kirchhoff's diffraction theory with its integral theorem and the specific cases of Fresnel and Fraunhofer diffraction; diffraction from ideal crystals and diffraction from real crystals considering temperature effects expressed by the temperature Debye- Waller factor and by thermal diffuse scattering, atomic size effects expressed by the static Debye-Waller factor and diffuse scattering due to the modulation of the Laue monotonic scattering as a consequence of local order or clustering; the basics of small-angle scattering; and finally approaches used to treat dynamical diffraction are introduced. In addition, the specifics of X-ray, electron and neutron scattering are being discussed. The course is complemented by a lab visit, selected exercises and short topical presentations given by the participants.

Module KRI 305 Synthesis and Assembly of Building Blocks
07SMKRI305 / Lecture with Practical Exercises

Description:

General description:
Introduction to commonly used wet chemistry methods for the synthesis of inorganic and polymeric particles of defined sizes and shapes, and concepts for assembling these building blocks into larger structures of varying complexity over multiple length scales.
The course is divided into two parts: I) synthesis of 0-, 1-, 2-, and 3- dimensional building blocks with a length scale from nm to µm, and II) assembly of these building blocks into 1-, 2- and 3-dimensional structures over several length scales up to cm.
In part I, various methodologies for the synthesis of the building blocks will be discussed, including Turkevich and Brust-Schiffrin-method for gold nanoparticles, hot-injection for semiconducting quantum dots, aqueous and nonaqueous sol-gel chemistry for metal oxides, or gas-and liquid-phase routes to carbon nanostructures.
Part II is focused on self- and directed assembly methods that can be used to create higher order architectures from those building blocks connecting the microscopic with the macroscopic world. Examples include photonic crystals, nanocrystal solids, colloidal molecules, mesocrystals or particle-based foams and aerogels.

Module KRI 306 Disorder in Materials
07SMKRI306 / Lecture with Practical Exercises

Description:

General description:
The course presents structure-property relationships in complex materials, such as metallic glasses and other disordered materials, magnetic spin ice, and chemically disordered crystals.

Part 1 focuses on the synthesis and processing of amorphous materials using physical routes. The resulting structure is discussed, as well as their thermodynamics and kinetics. The course focuses in particular on the relationships between the structure of glassy metals and other disordered materials and their resulting mechanical, thermophysical, biomedical and electronic properties. As to processing, new manufacturing routes such as 3D printing of metals are also introduced.

Part 2 focuses on materials that contain both ordered and disordered aspects. Examples are magnetic spin ices and chemically disordered crystals.

Course Materials:	Lecture material is presented in the form of slides and assignments, with the aim that the students develop their own, critical perspective on the subject. This also results in an adoption of the lecture content with respect to the feedback given by the students. A script is not delivered as it would just promote a "read, memorize, and reproduce" learning perspective, which is not the intention of this course. Instead, references to original articles and reviews will be provided
Merkmale:

Requirements:

Prior Knowledge:	Knowledge in the physics of materials, as provided by the ETH Zurich B.S. curriculum in Materials Science. Students are encouraged to provide continuous feedback so that the topics covered by the lecture can be constantly adopted.
Assessment:	end-of-semester examination, written 90 minutes

Over the course of the lecture, students are asked to solve eight assignments. For reasonably solved assignments students will receive up to 0.25 grade points to improve the total course unit grade.

Module Research Updates in Biomedical Image Analysis
04SMBMT21001 / Seminar

Description:

ECTS: 2

Notes:
Kontakt-Email:
bjoern.menze@uzh.ch

Learning Outcome:
Das Seminar richtet sich an fortgeschrittene Studierende, die im Bereich der Quantitativen Biomedizin und Biomedizinischen Bildverarbeitung eine Studien- oder Abschlussarbeit anstreben.
In dem Seminar werden Projektideen und Ergebnisse in eigenständig erstellten Vorträgen vorgestellt und in der Gruppe diskutiert. Aus der Diskussion bekommen die Teilnehmenden Rückmeldung zu den Zielen und Methoden ihrer Arbeit, sowie Anleitung für weitere Schritte, aber auch zur Präsentation selbst. Dies ermöglicht es den Präsentierenden, ihre erreichten Ergebnisse zu reflektieren und weitere Schritte zu planen.
Neben den Präsentierenden nehmen am Seminar Mitarbeitende des Lehrstuhls für Biomedizinische Bildanalyse und Maschinelles Lernen teil, die zur Diskussion beitragen, sowie jedwede Studierende und Doktoranden der Fakultät, die sich über aktuelle Themen im o.g. Bereich informieren möchten.
Voraussetzung für das Bestehen des Kurses ist die Teilnahme, bewertet wird die Präsentation und ihre abschliessende Diskussion. Eine abschliessende Prüfung findet nicht statt.

Module Philosophy of Law (BLaw)
02SM120GL1 / Course

Description:

General description:
Die Vorlesung führt in Grundfragen der Rechtsphilosophie ein. Sie klärt, warum Rechtsphilosophie ein ebenso zentraler wie faszinierender Teil der Rechtswissenschaften ist. Anhand verschiedener Beispiele aus der Ideengeschichte werden die grundlegenden normativen Leitideen moderner demokratischer Verfassungsstaaten und der internationalen Rechtsordnung wie Menschenwürde und Menschenrechte, Freiheit, Gleichheit, soziale Solidarität, Demokratie, Gerechtigkeit, Schuld und Verantwortung entwickelt. Die Vorlesung untersucht zudem den erkenntnistheoretischen Grad der Begründetheit von normativen Prinzipien. Ist die Idee der Menschenwürde beispielsweise eine zeit-und kulturgebundene, schnell vergehende, flüchtige Vorstellung oder ein tief und dauerhaft begründetes Rechtsprinzip? Auch die Frage, ob Menschen tatsächlich Willensfreiheit geniessen, wird im Lichte der kognitionswissenschaftlichen Forschung der Gegenwart diskutiert. Ist Autonomie vielleicht nur eine selbstverliebte Illusion der Menschen? Durchwegs werden die philosophischen Fragen auf praktische Probleme des Rechts der Gegenwart bezogen und an ihnen in ihrem Gehalt erprobt. Die Theorie, um diees geht, hat unmittelbar praktische Bedeutung.

Module Student Teaching Assistant 2
06SM521-021 / Module

Description:

General description:
Ein Tutorat/Übungsleitung dient der Erlernung von ersten didaktischen Fertigkeiten. Dies setzt ein reflektiertes Verständnis fachspezifischer Inhalte voraus und erfordert die Aufbereitung von Lernmaterialen für das Repetieren der Inhalte aus der Vorlesung, sowie das Konzipieren und Korrigieren von Übungsblättern. Dieses Modul kann mit einer Punktzahl von 3 oder 6 gebucht werden. Die Punktanzahl wird in Absprache mit dem Modulverantwortlichen festgelegt.

ECTS: 6

Notes:
Studierende, die eine Lehrveranstaltung erfolgreich absolviert haben und an einer zukünftigen Übungsleitung interessiert sind, sollen frühzeitig selbstständig die Dozierenden kontaktieren. Diese melden die Besetzung des Tutorats an die Programmkoordination (programmkoordination@cl.uzh.ch).
Vor jedem Semester wird zusätzlich per E-Mail auf offene Tutoratspositionen hingewiesen, auf die sich Studierende bewerben können.

Nach Abschluss des Tutorats wird das Modul durch die Programmkoordination entsprechend dem Zeitaufwand mit 3 oder 6 ECTS gebucht und als bestanden bewertet. Eine selbstständige Buchung im Buchungstool ist nicht möglich. Im Laufe einer Studienstufe können max. zwei Module «Übungsleitung/Tutorat» gebucht werden, wobeidie beiden Module sich auf unterschiedliche Lehrveranstaltungen beziehen müssen.

Learning Outcome:
Die Studierenden: - verstehen fachspezifische Inhalte aus einer Lehrperspektive; - lernen Vorlesungsinhalte zielgruppengerecht aufzubereiten und als Übungsmaterial zu konzipieren; - lernen zu korrigieren und Rückmeldung zu geben.

Languages of Instruction:
Deutsch und/oder Englisch

Merkmale:	Target Group: Suitable for English Speakers

Requirements:

Prerequisites:	Im Laufe einer Studienstufe können max. zwei Module "Übungsleitung/Tutorat" gebucht werden, wobei sich die beiden Module inhaltlich unterscheiden müssen. Dieses Modul wird gebucht, um sich eine zweite Übungsleitung anrechnen zu lassen. Für dieses Modul muss man sich bewerben. Zuvor muss zwingend Rücksprache mit dem Modulverantwortlichen genommen werden (per E-Mail). Die Dozierenden der Lehrveranstaltung müssen in den E- Mail-Verkehr einbezogen sein. Übungsleitungen werden normalerweise einige Wochen vor Semesterbeginn auf der Mailingliste der Computerlinguistik (cl- list@lists.ifi.uzh.ch) ausgeschrieben. Die Studierenden können sich auch gerne jederzeit spontan bei den Dozierenden bewerben, für deren Lehrveranstaltung sie eine Übungsleitung übernehmen möchten. Für Übungsleitungen/Tutorate muss das entsprechende Modul selbst erfolgreich bestanden sein.

General description:
Dieses Modul kann gebucht werden, um ein zweites Programmierprojekt anrechnen zu lassen. Programmierprojekte dienen der Festigung der Programmierkenntnisse und dem Erwerb von Fertigkeiten, wie sie im Kontext des Softwareengineering erforderlich sind. Ausgehend von einer computerlinguistischen Fragestellung und ggfs. relevanter Fachliteratur wird ein Lösungskonzept erarbeitet, es werden die Meilensteine fixiert, es werden Daten beschafft und/oder eigens annotiert, es wird ein Programm implementiert und schliesslich anhand der Daten evaluiert. Sie können entweder ein eigenes Thema einbringen oder ein vorgegebenes Thema selbstständig bearbeiten. Bei Programmierprojekten ausserhalb des Instituts ist vor dem Projektstart eine E-Mail an die modulverantwortliche Person zu senden, mit Angaben zur betreuenden Person (vollständiger Name, Funktion, E-Mail) und zum Projektthema, um die Anrechenbarkeit abzuklären.

Nach erfolgreichem Abschluss des Programmierprojekts sendet die betreuende Person eine E-Mail an programmkoordination@cl.uzh.ch mit folgenden Angaben: (1) vollständiger Name, (2) Matrikelnummer, (3) Studienprogramm, (4) Modulnummer
06SM521-022, (5) Projekttitel, (6) Anzahl der erworbenen ECTS Punkte (3, 6 oder
9), (7) Bestätigung, dass der entsprechende Arbeitsaufwand (90h, 180h, 270h) geleistet wurde.

Das Modul wird danach für das Semester, in dem der Hauptteil der Arbeit stattgefunden hat, durch die Programmkoordination gebucht und als bestanden bewertet. Eine selbstständige Buchung im Buchungstool ist nicht möglich. Das Projekt kann bereits vor dem offiziellen Semesterbeginn starten. Im Laufe einer Studienstufe können max. zwei Programmierprojekte gebucht werden.

Learning Outcome:
Die Studierenden: - planen ein Projekt; - setzen einen Projektplan um;
- realisieren Software; - halten Dokumentationsstandards ein; - evaluieren; - nutzen Softwarerepositorien.

Module Student Teaching Assistant 2
06SM521-516 / Module

Description:

General description:
A student teaching assistance serves the acquisition of basic teaching skills. This requires a deeper insight of the contents of the associated lecture and the ability to prepare teaching material in order to help the students to better understand it. The task also involves the preparation and correction of exercises. This module can be booked to credit the conducting of exercises/tutorials. This module can be booked with 3 or 6 ECTS points. The amount of points will be decided in consultation with the module coordinator.

ECTS: 6

Notes:
Students who have successfully completed a course and are interested in a future tutorial/teaching assistantship should proactively contact the course instructor. The instructor reports the assignment to the program coordination (programmkoordination@cl.uzh.ch). Before each semester, an email will also be sent with open tutorial positions, to which students may apply.

After successful completion of the tutorial, the module will be registered and marked as passed by the program coordination with 3 or 6 ECTS depending on the workload.
Self-enrollment via the booking tool is not possible. A maximum of two "Student Teaching Assistant" modules can be registered per academic level, and they must relate to different courses.

Learning Outcome:
The students: - cope with computational linguistics content from a teaching perspective; - learn to prepare computational linguistics content in a way tailored to a student's audience; - learn to correct excercises and give appropriate feedback.

Languages of Instruction:
Deutsch und/oder Englisch

Merkmale:	Target Group: Suitable for English Speakers
Responsible instructor:	Simon Clematide

Requirements:

Prerequisites:	In the duration of a study level a maximum of two modules «Student Teaching Assistant» can be booked, whereby the two modules must differ in content (also to any previously completed student teaching assistant modules). This module is booked in order to receive credit for a second job as a student teaching assistant at master's level. This module is an application module, the application has to be authorized by the module coordinator (per Email). The lecturers have to be included in the communication. The open positions for student teaching assistants are usually posted on the mailing list of the Institute of Computational Linguistics (cllist@lists.ifi.uzh.ch) a few weeks before the semester starts. Students interested in conducting exercises/tutorials of a specific course can apply anytime for the position directly with the lecturer and the module coordinator. The module in question must have been passed successfully beforehand.

Module Programming Project 2
06SM521-517 / Module

Description:

General description:
Programming projects aim at the consolidation of programming skills and the acquisition of software engineering skills. Starting with a particular research question and relevant literature, they work on a solution, define milestones, acquire and/or annotate data, implement a program and evaluate it using appropriate data. This module can be booked with
3, 6 or 9 ECTS points. The amount of points will be decided in consultation with the module coordinator.

ECTS: 6

Notes:
Students must independently find a supervisor at the Department of Computational Linguistics. They may propose their own topic or work independently on a predefined one. For programming projects carried out outside the department, an email must be sent to the module coordinator before the project starts, including the supervisor's details (full name, position, email) and the project topic, to clarify whether the project can be credited.

After successful completion of the programming project, the supervisor sends an email to programmkoordination@cl.uzh.ch with the following information:
(1) full name,
(2) matriculation number,
(3) degree program,
(4) module number
06SM521-517,
(5) project title,
(6) number of ECTS credits earned (3,
6, or
9),
(7) confirmation that the corresponding workload (90h,

Module Legal History (MLaw)
02SM90GL11 / Course

Description:

General description:
Legal History often deals with remote, albeit very interesting and relevant, issues. However, legal history can also provide a picture of more recent developments which form the basis of our current laws. This course will do exactly that. It will provide students with an account of some of the crucial lines of development within Europe's Legal History of, roughly speaking, thelast 200 years. Thus, the course will combine legal history with an assessmentsof today's legal culture.
In contrast to the Master-Vorlesung Rechtsgeschichte der bürgerlichen Moderne (which is delivered in German), this course will not adopt Switzerland as its starting point. Instead, it will trace, and thus follow, the developments of the law in Europe from the French revolution onwards, thereby providing students with a general comparative framework.
The course is designed for students who wish to obtain a broad overview of somecommon, specifically modern, features of the Western legal tradition. It is open to Swiss students (both students at the UZH and those doing a Joint Degree) as well as students from abroad who are spending part of their studies at Zurich University (e.g. Double Degree and Master Programme students).
Students do not need to fulfill any particular preconditions for attending this course, nor will they be expected to have attended legal history courses before. The only prerequisite is curiosity. This course will be offered in the Spring Semester.

Module Contemporary History of Law
02SM90GL2 / Course

Description:

General description:
The course will focus the attention on the 16th to the 20th centuries, scrutinizing the «modern» development of State's theories and the creation ofthe international law system; the complex and contradictory relations between violence and law, between war and law, between race and law, between (in)equality of man and law and finally between economy and law. The course will outline and analyse the legal consequence of entanglements, interactions, collisions of law and relate this to the nature and construction of the social order from a historical perspective.
Reading of primary sources combined together with a critical reconstruction on law and jurists in their context will be done during the course.

Module Historical Foundations of Swiss Private Law
02SM90GL4 / Course

Description:

General description:
Das schweizerische Privatrecht ist von Vorstellungen und Regeln durchdrungen, die aus den römischen Quellen der Antike im Rahmen des „Gelehrten Rechts“ geprägt wurden. Sie gehen damit auf einen an den Universitäten entstandenen juristischen Fachdiskurs zurück, die sich von Norditalien (Bologna) aus auf ganz Europa ausbreitete.

Rechtsbegriffe, Systematik und Methode, die man im Umgang mit den antiken Texten entwickelte, wurden auch von der Rechtspraxis aufgenommen („Rezeption“), und bilden – gemeinsam mit dem kanonischen Recht – ein gesamteuropäisches Gemeinrecht („ius commune“). Dieses über Jahrhunderte immer wieder neu interpretierte Recht diente seit dem 18. Jahrhundert auch als Material für die nationalen Zivilrechtskodifikationen, zu denen neben dem französischen Code civil (1804), dem österreichischen ABGB (1811) und dem deutschen BGB (1900) auch das schweizerische OR (1883) und ZGB (1912) gehören.

Die Vorlesung eröffnet einen Zugang zu diesen gemeineuropäischen Wurzeln des schweizerischen Privatrechts, indem sie zunächst einen Überblick über Entwicklungstendenzen und Kontinuitäten zwischen der justinianischen Kodifikation im 6. Jahrhundert bis zur Pandektistik des 19. Jahrhunderts vermittelt. Sodann zeigt sie anhand zweier Beispiele, wie sich die historische Entwicklung bis in die heutige Privatrechtsdogmatik fortsetzt und welche Vorteile eine historisch informierte Rechtsauslegung und -anwendung im Privatrecht bietet.

Die Veranstaltung wird als Blockveranstaltung in Präsenz (an vier Freitagen im März und April) durchgeführt (siehe Termine unten). Lateinkenntnisse sind nicht vorausgesetzt; alle Quellen (aus Antike, Mittelalter und Neuzeit) werden in Übersetzung zur Verfügung gestellt.

ECTS: 6

Notes:
Begleitend zu den Veranstaltungsblöcken finden Online-Tutorate statt.

Learning Outcome:
Die Veranstaltung soll die historische Dimension des schweizerischen Privatrechts aufzeigen und an die fortwährende Bedeutung der historischen Entwicklung für die Dogmatik des modernen Privatrechts heranführen.

Die Studierenden sollen eine exemplarische Einführung in Themen und Quellen der historischen Privatrechtsentwicklung erhalten; sie sollen in die Lage versetzt werden, selbstständig eine dogmengeschichtliche Entwicklung nachzuvollziehen und darzustellen.

Module Pathophysiologie der Gefässe
04SMCHI21001 / Kurs

Description:

ECTS: 0

Notes:
Kontakt-Email:
jaroslav.pelisek@usz.ch

Learning Outcome:
Darstellung des Kurskonzepts:
Gefässerkrankungen sind in unserer immer älter werdenden Gesellschaft auf dem Vormarsch und werden daher vermehrt behandelt, weil insbesondere das Alter ein bislang nicht-veränderbarer Risikofaktor in deren Entstehung und Progression entscheidende Rolle spielt.
Das Ziel des Kurses ist interessierten Medizinstudentinnen/-en eine Möglichkeit zu bieten, Erkrankungen des Gefäßsystems besser zu verstehen. Es sollten Grundlagen der Gefässmedizin vermittelt werden, unter anderem der Aufbau der Gefässe auf molekularen und zellulären Ebene, sowie die Veränderung der Gefässwand während einer Erkrankung.
Darüber hinaus soll der Kurs auch experimentelle Möglichkeiten erläutern und neue potentielle diagnostische und therapeutische Verfahren vorstellen. Im Vordergrund steht die Pathophysiologie der Atherosklerose und Aneurysma, sowie die Auswirkung verschiedener kardiovaskulärer Risikofaktoren (Hypertonus, Rauchen, Diabetes, chronische Niereninsuffizienz).
Die einzelnen Kurse bauen thematisch aufeinander auf. Es wird zunächst der anatomische und biologische Aufbau der Gefässwand erklärt, mit Fokus auf die einzelnen Komponenten der extrazellulären Matrix und die Rolle insbesondere von Endothel- und glatten Muskelzellen, um die daraus entstehenden vaskulären Erkrankungen besser zu verstehen. Es wird die Atherosklerose als gemeinsame Grundlage der meisten vaskulären Erkrankungen besprochen. Daran anschließend werden Risikofaktoren und deren Einfluss auf das Fortschreiten der Gefässerkrankungen diskutiert.
Weiterhin wird der aktuelle Stand der Wissenschaft inklusive Epigenetik, non-coding RNA, Omics-Technologien und zukünftige diagnostische und therapeutische Strategien besprochen.
Das Unterrichtsformat sollte eine regelmässige Präsenzveranstaltung sein. Geplant ist neben der theoretischen Vermittlung der Inhalte auch das Angebot an die Studierenden, selbst und unter Anleitung praktisch im Labor tätig zu sein. Somit können die Studierenden Erfahrung in verschiedenen und modernen Untersuchungsmethoden sammeln.
Wegen der Komplexität der Inhalte, würde sich dieses Angebot an Studierende fortgeschrittener Jahrgänge wenden: z.B. Wahlmodul im Masterstudium.

Lernzieldefinitionen für die Vorlesungsreihe: Das Ziel der Vorlesungsreihe ist die Vermittlung von Grundwissen über Blutgefäße, deren Funktionalität und über biologische Vorgänge, die zu einer Gefäßerkrankung führen. Dadurch erlangen die Studierenden bessere Fertigkeiten, eine korrekte Diagnose und folgende Therapie zu erstellen.
1. Atherosklerose und Aneurysma: Ursachen und Entstehung Dieser Teil des Kurses beinhaltet die Einführung in die Problematik, Pathologie des Umbaus der Gefäßwand, die Rolle von Endothel- und glatten Muskelzellen, Neovaskularisieurung, Klassifizierung atherosklerotischer Läsionen.
2. Gefässremodelling: Die Rolle der Inflammation und Proteasen Hier soll das Grundwissen über die Rolle und Funktion von inflammatorischen Zellen, Zytokinen und proteolytischen Enzymen, auch als mögliche prognostische Biomarker und therapeutische Target vermittelt werden.
3. Risikofaktoren der Gefässerkrankungen Dieser Teil des Kurses soll den Einfluss von bekannten Risikofaktoren wie Alter, Hypertonus, Rauchen, Diabetes, oder Niereninsuffizienz auf das Fortschreiten von Gefässekrankungen erläutern und damit verbundenen erhöhtes Risiko eines Schlaganfalls oder einer Aneurysmaruptur.
4. Die Rolle von Epigenik und non-coding RNA in Gefässerkrankungen Es sollen hier die Grundlagen der Epigenetik und nicht-codierenden RNAs erklärt werden, mit Fokus auf epigenetische Veränderungen in den

erkrankten Gefässen und die Rolle von nicht-kodierenden RNAs (miRNAs, lncRNAs, circRNAs)
5. Grundlagen der Methodik in der Erforschung von Gefässerkrankungen In diesem Teil des Kurses soll die Wichtigkeit der Biobank thematisiert, moderne Omics-Technologien (Transkriptomics, Proteomics, Epigenomics) erklärt und Beispiele aus unserer eigenen Forschung vorgestellt werden.
6. Gefässmedizin der Zukunft
Abschliessend soll, bezogen auf den jetzigen Stand der Forschung, ein Ausblick auf neue diagnostische und therapeutische Verfahren in der Gefässmedizin, hochauflösendes Imaging, Gentherapie vermittelt werden.

Description:

General description:
The module covers either: (1) international aspects of civil litigation in national courts, or (2) complex litigation in national courts involving a multitude of participants, such as bankruptcy proceedings, class or other formsof group actions, or collective redress.
The precise content of the course will be announced separately for every semester in which it will be taught.
In spring 2024, this will be a course on U.S. class actions, taught by Professor Baumgartner.
The purpose of this course is for you to learn some of the basics of U.S. classaction law and practice. This should enable you to come to a first, tentative evaluation of what works, what does not, what is special to the United States, and what is perhaps portable to other jurisdictions considering introducing some form of collective redress. The focus is on federal class actions, that is, on Federal Rule of Civil Procedure 23 and the case law interpreting and developing it.

Module Artificial Intelligence: Technology and Law
02SM90WM39 / Course

Description:

General description:
Machines are increasingly capable of performing tasks considered to require "intelligence" if performed by human beings. Recent developments in the field of Artificial Intelligence (AI) are fueled by novel data processing technologies, ever growing amounts of data, and increased computing power. AI systems come with great promises and opportunities, but they also raise concerns in many respects and they pose significant challenges to the application of today's legal order. Accordingly, regulators around the glo arecurrently investigating if and how the law should be adapted to meet these challenges.
This course provides participants with an interdisciplinary view on AI by focusing on the capabilities of AI systems and the regulatory as well as technical responses in Switzerland and Europe. In doing so, it also highlights some of the fundamental differences in preventing undesired outcomes in law andcomputer science and challenges all participants to reflect on practical solutions for the future.

ECTS: 6

Learning Outcome:
Students will gain a basic understanding of the technical and legal foundations of AI and will learn how to interact and achieve scientific output in an interdisciplinary team and how to communicate their findings to a cross-disciplinary audience.

02SM90WM72 / Course

Description:

General description:
Das Strafrecht spielt in der Praxis eine gewichtige Rolle, wenn Verstösse gegen Regeln des (Bundes-)Verwaltungsrechts zu ahnden sind.
Gestützt auf Vorträge und den Austausch mit PraktierInnen wirft die Veranstaltung ein strafrechtliches Augenmerk auf namentlich folgende Gebiete: Umweltrecht, Energierecht, Heilmittelrecht, Finanzmarkrecht und Steuerstrafrecht und Glücksspielrecht. Grundlegend wird dabei das Bundesgesetz über das Verwaltungsstrafrecht (VStrR) einbezogen und auf diese Weise unter intensiven Praxisbezug dessen konkrete Anwendung und Folgen beleuchtet.

ECTS: 6

Notes:
Folgende Modulteile soll das Modul beinhalten: Grundlagen VStrR, Verwaltungsstrafrecht, Heilmittelrecht, Steuerstrafrecht, Finanzmarktrecht, Umwelt- und Energierecht

Learning Outcome:
Ziel ist die konkrete Anwendung und das Überblicken der Folgen von Verstössen sowie die Sanktionierung und das Verfahren im Bereich des Umweltrechts, Energierechts, Heilmittelrechts, Finanzmarkrechts und Steuerstrafrechts.

Aufbauend auf den im Bachelorstudiengang erworbenen Kenntnissen zu den allgemeinen Lehren des Straf- und Strafprozessrechts setzen sich die Studierenden mit VStrR auseinander. Sie kennen dessen Geltungsbereich und Systematik und haben sich vertieft mit den materiellrechtlichen Bestimmungen allgemeiner Art, den besonderen Straftatbeständen und dem Verwaltungsstrafverfahren beschäftigt. Dies gerade und namentlich hinsichtlich Bestimmungen aus dem Umweltrecht, dem Heilmittelrecht, dem Energierecht, dem Finanzmarkrecht und dem Steuerstrafrecht.

Aufgrund der erworbenen Kenntnisse sind die Studierenden in der Lage, Fälle aus diesen Bereichen zu bearbeiten, zu analysieren und zu bewerten.

Im Rahmen des Studienmoduls Strafrecht I besteht die Möglichkeit, eine Fallbearbeitung (3 ECTS-Credits) zu verfassen. Eine bestandene Fallbearbeitung ist ein notwendiger Leistungsnachweis für das Absolvieren der Assessmentstufe.

ECTS: 3

Notes:
In der Assessmentstufe müssen die Studierenden eine schriftliche Fallbearbeitung bestehen. Es kann gewählt werden zwischen: Fallbearbeitung im Römischen Privatrecht, Fallbearbeitung im Personenrecht, Fallbearbeitung im Strafrecht I und Fallbearbeitung im Öffentlichen Recht I. Die Teilnehmerzahl je Fallbearbeitung ist beschränkt. Die genaue Anzahl ist noch nicht abschliessend festgelegt.

Die Anmeldung zur Fallbearbeitung im Assessment erfolgt jeweils bereits Ende November/Anfang Dezember des Herbstsemesters über das Studierendenportal. Bei der Fallbearbeitung im Assessment handelt es sich um ein Anfragemodul. Um mit Sicherheit eine Zuteilung zu erhalten, ist es wichtig, für alle vier Fallbearbeitungen eine Anfrage zu stellen und eine Priorität (1 bis 4) zu vergeben.

Jede Studentin bzw. jeder Student kann nur eine schriftliche Fallbearbeitung einreichen.

Sobald alle Details geklärt sind, werden sie auf der Website des Lehrstuhls von Prof. Dr. iur. Christian Schwarzenegger bekannt gegeben.

Module Introduction to Research Data Management
10SMSTS-516 / Module

Description:

General description:
This introductory course on research data management (RDM) familiarizes students with important aspects and components of RDM and the data lifecycle. The course will also teach about data repositories, including how to find and cite existing data from such repositories, and about some of the legal aspects of data reuse and sharing, e.g. data licenses. After the end of this course, students are able to plan their own research data management. The introductory course is intended for bachelor students, master students and also PhD students who have little or no prior knowledge of research data management. The course takes place as a half-day face-to-face event with online learning components before and after the course. The online preparatory tasks need to be completed before the day-event.

ECTS: 1

Notes:
Preparatory tasks will be made available on OLAT three weeks before the day event and need to be completed before the course date. Please be aware that the tasks in the preparation phase aim to provide you with the necessary information and knowledge while the day event will be dedicated to the application of said knowledge. Attention: The general booking and cancellation deadlines of UZH apply to this module. This course might not be suitable for first-year BA students; please contact the course administrator (Melanie Röthlisberger) to discuss your case. If you are a doctoral student who would like to have an introduction to both Open Data and Open Access, we encourage you to take a look at the GRC course "Open Up and Share" instead.

Learning Outcome:
After this course, students are able to
1. recognize and describe important components of the data life cyle and Research Data Management (RDM),
2. name data repositories for their research data,
3. correctly cite existing datasets,
4. recognize, interpret and use correctly licenses for research data, and
5. write down important aspects of their research data management in a data management plan.

Module Making your data FAIR
10SMSTS-517 / Module

Description:

General description:
In the course "Making your data FAIR" students are familiarized with important aspects of FAIR (findable, accessible, interoperable, reusable) data as an essential prerequisite for publishing and sharing their data and for increased reproducibility and replicability of scientific research. They learn how to make their own data FAIR following existing standards (e.g. metadata) and how to assess the FAIRness of existing datasets. The course is intended for interested bachelor students, master students and PhDs who have some prior knowledge in data management and who would like to share their data with the scientific community and to increase its reusability. The course takes place as a half-day on-site event with online learning components before and after the on-site event.

ECTS: 1

Notes:
Preparatory tasks will be made available on OLAT three weeks before the on-site event and need to be completed before the event. Please be aware that the tasks in the preparation phase aim to provide you with the necessary information and knowledge while the day event will be dedicated to the application of said knowledge.
Attention: The general booking and cancellation deadlines of UZH apply to this module.

Learning Outcome:
After this course, students are able to
1. assess their own data (or other researchers' data) according to the FAIR principles, highlight deficiencies according to the FAIR principles and improve them,
2. prepare their own data according to existing standards (following the FAIR principles), e.g. use non-proprietary data formats, use controlled vocabulary, follow metadata standards, and
3. find FAIR-compatible repositories to store and share their data.

Module Open Access Basics
10SMSTS-515 / Module

Description:

General description:
The introductory course "Open Access Basics" introduces students to the field of Open Science with a specific focus on Open Access - the online availability of articles and books. They learn about the newest developments in the publication landscape, how to access materials behind a paywall, explore the characteristics of Open Access and the difference to publications in traditional subscription-based journals.
Publication versions and legal aspects of publishing will also be discussed, as well as the impact that Open Access can have on society. The introductory course is intended for bachelor and master students who have little or no prior knowledge of Open Access. The course takes place as a half-day on-site event with online learning components before and after the event.

ECTS: 1

Notes:
Preparatory tasks will be made available on OLAT three weeks before the on-site event and need to be completed before the event. Please be aware that the tasks in the preparation phase aim to provide you with the necessary information and knowledge while the on-site event will be dedicated to the application of said knowledge.
Attention: The general booking and cancellation deadlines of UZH apply to this module. This course might not be suitable for first-year BA students; please contact the course administrator (Melanie Röthlisberger) to discuss your case.

If you are interested in the topic but just want some quick information, have a look at our Open Access course on OLAT [https://lms.uzh.ch/url/RepositoryEntry/17366450219]

Learning Outcome:
After this course, students are able to
1. name different versions of manuscripts,
2. differentiate between Open Access publications (diamond, gold, green) and traditional publications in subscription journals,
3. name various possibilities how and where to publish OA using online research tools such as the DOAJ,
4. access material that is behind a paywall and
5. distinguish between different creative commons licenses

Module GEO 820 Stable isotopes in ecosystem science
07SMGEO820 / Course

Description:

General description:
Stable isotopes of the elements H, C, N, and O, which are frequently used in ecosystem research, are content of this course. You will learn, how isotopes can be distinguished and measured using theoretical background information and practical examples. We will use case studies to highlight various applications of stable isotopes to trace element cycles in ecosystems. You will bring your own water and plant samples and prepare them for the measurements on your own. The results of these measurements will be used to apply your theoretical background knowledge in your own case study.

ECTS: 3

Notes:
Presence and active participation during on-site lectures is expected.
The Sustainable Development Goals (SDGs (https://sdgs.un.org/goals)) are a collection of 17 global goals interacting with each other, which are designed to be the blueprint to achieve a better and more sustainable future for all. The 2030 Agenda for SDGs is adopted by all United Nations Member States.   These SDGs are covered in this module: 2;
6 & 13

Learning Outcome:
You know definitions and conventions that apply to stable isotopes of the elements H, C, N, and O.
You know the difference between monitoring and tracer experiments with respect to stable isotope applications.
You know the common methods to measure stable and radioactive (14C) isotopes.
You know, how to apply stable isotopes of H and O to trace water cycles.
You know common methods to use isotopes of C in environmental and ecosystem science.

Target Groups:
MSc and PhD students of all disciplines, who are interested in cycling of elements in the environment and want to learn about common chemical tools.
Especially (but not limited to) MSc and PhD students in Physical Geography and Earth System Science.

Languages of Instruction:
English

Course Materials:	Podcasts of introductory lectures will be provided. All lecture and additional materials including selected literature will be provided as pdf-documents on OLAT. Support and detailled information on the homework is provided during the on-site lectures and on OLAT. Data for your homework is provided as Excel spreadsheets.
Merkmale:	Target Group: Suitable for English Speakers
Responsible instructor:	Guido Lars Bruno Wiesenberg

Requirements:

Prior Knowledge:	Basic knowledge in chemistry
Assessment:	Samples provided by the group will be measured for their isotope composition. The obtained data has to be interpreted in the framework of a written homework.

This will contribute the main part of the mark.
Bonuspoints can be collected through active participation and keeping all deadlines of individual duties. The mark might be lowered, if deadlines are missed and your participation is passive.

Module Climate Change Law
02SM90WM41 / Course

Description:

General description:
Anthropogenic climate change is arguably the most severe challenge facing humanity. The course seeks to situate "Climate Change Law" with its cross-cutting character in both international law and domestic (environmental) law. Students will gain insights into the relation between Climate Change Law and General International Law as well as International Environmental Law and acquire knowledge on the history of the emergence of the international regime to mitigate and adapt to climate change. On the basis of an introduction into the geophysical basis of human-induced climate change, provided by Professor Dr. Reto Knutti, Center for Climate Systems Modeling (C2SM), Swiss Federal Institute of Technology (ETH Zurich), the course will enable the students to gain a profound understanding of the complex treaty-based regime of Climate Change Law spanning from the United Nations Framework Convention on Climate Change (UNFCCC) to the Paris Agreement on Climate Change and discuss the implementation thereof both at the domestic level (Switzerland) and in the European Union. Students will get familiar with the potential and challenges ofclimate change litigation and the role private actors such as corporations and social movements can play in the combat against global warming. Presentations by external experts form an integral part of the lecture.

luregn.schlapbach@kispi.uzh.ch

Learning Outcome:
Im Seminar "Grundlagen der pädiatrischen und neonatalogischen Intensivmedizin" werden zweiwöchentlich Hauptthemen der pädiatrischen Intensivmedizin und der Neonatologie besprochen. Die Hauptthemen decken organspezifische Pathophysiologien und Therapien (Lungen-/Leber-/Kardiale Probleme u.ä.), sowie auch mit der Intensivmedizin eng verbundene Themen (zB Evidence Based Medicine, Palliativ-/Reanimations-Medizin und Ethik) ab.
Die Donnerstage sind themenorientiert gestaltet mit Fallbesprechungen und mehreren Theorieteilen mit genügend Zeit für Fragen und Diskussionen. Evidenz basierte Therapieempfehlungen werden besprochen und diskutiert.
Die Lernziele sind es in einem interdisziplinären und interprofessionellen das Grundverständnis für die Pathophysiologie intensivmedizinischer und neonatologischer Krankheitsbilder und deren Diagnostik und Therapie anhand von aktueller Evidenz kennen zu lernen.
Studierende können durch eigene Beiträge und durch in etlichen Vorträgen angewandte live-voting-tools eine aktive Rolle einnehmen. Bitte schreiben Sie eine E-Mail an Jutta Hehli (jutta.hehli@kispi.uzh.ch) um eine persönliche Einladung mit Angaben zu Zeit, Raum und Thema zu erhalten. Die Veranstaltung findet aktuell online statt. Es ist keine Prüfung vorgesehen.
